DME COMPANY LLC ("SELLER")
TERMS AND CONDITIONS OF SALE

1. ACCEPTANCE OF TERMS: Seller's offer is expressly conditioned upon Buyer's acceptance of these Terms and Conditions, and Seller expressly objects to any additional or different terms proposed by Buyer. Any subsequent purchase order issued by Buyer shall constitute Buyer's agreement to these Terms and Conditions. Any contrary terms and conditions contained in any purchase order, facility entry form, or other instrument issued by the Buyer are expressly rejected and shall not apply to this transaction. Unless otherwise specified in the quotation, Seller's quotation shall expire 30 days from its date and may be modified or withdrawn by Seller before receipt of Buyer's conforming purchase order.
2. PAYMENT TERMS: Payment is due in accordance with any applicable progress, advance or other agreed upon payment schedule, or, if no such schedule has been agreed to, no later than 30 days from the date of invoice. Buyer shall pay a late payment charge computed at the lower of 1.5% per month on any overdue balance, or the maximum rate permitted by law. No cash discount is provided. If at any time Seller reasonably determines that Buyer's financial condition or payment history does not justify continuation of Seller's performance, Seller shall be entitled to require full or partial payment in advance or otherwise restructure payments, request additional forms of payment security, suspend its performance or terminate the order.
3. DELIVERY
3.1 In the United States, products are sold FCA Incoterms 2020 point of origin; for export sales, terms are FCA Incoterms port of export. Unless otherwise agreed in writing, title and risk of loss shall pass at the time of shipment. Buyer is responsible for all taxes, duties, fees, or other governmental charges related to its purchase of goods, with the sole exception of taxes on Seller's income. Unless otherwise agreed, Buyer shall pay all packing and delivery costs.
3.2. Seller's quoted lead times and targeted delivery dates are good faith estimates and are not binding on Seller. Buyer's acceptance of delivery of Seller's products from the carrier shall constitute a waiver of any claim for delay. If Seller notifies Buyer that the products are ready for shipment and Buyer delays delivery, then Seller may charge Buyer a storage fee equal to 1.5% of the contract price per month for each month of delay. Such storage fees are in addition to any other remedies Seller may have.
3.3. Buyer shall have a reasonable opportunity to inspect any products prior to shipment. Products shall be deemed to be accepted upon the earlier of: (i) inspection at Seller's plant (provided that no reasonable objection is then raised by Buyer), or (ii) if no inspection is requested, then at shipment. If an objection is made during inspection, then Products shall be deemed accepted upon resolution of the objection by Seller.
4. WARRANTY:
4.1. Seller's express product warranty be as stated in DME's order specification documentation and shall run from the date of shipment (the "Warranty Period"). During the Warranty Period, Seller warrants that the products and services sold hereunder will be free from material defects in material, workmanship and title (the "Warranty").
4.2. If, during the Warranty Period, Seller reasonably determines that the products do not meet the Warranty, then Seller shall, at its option, repair or replace the defective product or component thereof, reperform any defective services at Seller's expense, or refund or credit to Buyer its purchase price for the defective products or services.
4.3. The Warranty will be void and will not apply: (i) when Buyer fails to promptly notify Seller of any alleged defect, (ii) when Buyer fails to properly install, maintain, or operate the products, (iii) to any product or parts thereof with a useful life, under normal operating conditions, inherently shorter than 1 month, or (iv) to products which were not made by Seller or any of Seller's affiliates, provided that in such cases Seller shall use reasonable efforts to pass on to Buyer the manufacturer's warranty.
4.4. If Seller provides any parts or services to repair a product that is not under Warranty, then such parts and services will be billed to Buyer at Seller's prevailing rates for time and materials.
4.5. The Warranty set out above is the sole and exclusive warranty provided by Seller for its products and is in lieu of, and Seller expressly disclaims, all other warranties, express or implied, oral, written or statutory. THERE ARE NO WARRANTIES OF MERCHANTABILITY OR FITNESS FOR PURPOSE FOR SELLER'S PRODUCTS.
5. LIMITATION OF LIABILITIES:
5.1. Seller's total liability to Buyer arising out of or resulting from this Contract or related in any way to Seller's products or parts thereof shall not exceed the contract price for such products.
5.2. Seller shall not be liable for loss of profit or revenues, loss of use of products, interruption of business, downtime costs, increased operating costs, or any special, consequential, incidental indirect or punitive damages, whether incurred by Buyer or Buyer's customers.
5.3. Because the conditions of actual production in each end user's plant vary considerably, Buyer assumes all risk for the results obtained by use of Seller's products in the practice of any process, whether in terms of operating costs, general effectiveness, success or failure, and regardless of any oral or written statements made by Seller related to the use of its products.
6. SECURITY INTEREST. Buyer agrees that the Seller shall have and retain a purchase money security interest in the Products securing the payment of all sums becoming due hereunder. Such security interest shall attach, upon completion of manufacture, to the Products and to any parts or accessories attached to the Products and to the proceeds of any sale thereof. Buyer represents that the Products are being acquired for use in its business and that such Products will not, without prior written consent of the Seller, be sold or removed from the Buyer's place of business to which delivery is made. Buyer agrees upon Seller's request to execute any financing statements or other documents required to perfect, continue or renew Seller's security interest in the Products.
7. CANCELLATION: Unless otherwise agreed, Buyer may cancel all or any part of the order by written notice received by Seller before the completion of the order. On receipt of such cancellation notice, all work on the order or part thereof canceled will be stopped as promptly as is reasonably possible. Buyer will then be invoiced for and will pay to Seller as liquidated damages a cancellation charge. For completed items, the charge will be equal to their established prices. For items not completed, the charge will be equal to 135% of Seller's full cost as determined by Seller in accordance with Seller's standard accounting practices (which includes burden and overhead), plus a charge for any packing and storage, less a credit for the balance of the material as scrap.
8. RETURNS: All returned items require a Return Merchandise Authorization (RMA) number from DME. Returns are subject to a quality inspection to validate whether it can be returned to inventory. Mold bases, plates, special components, made-to-order products and other date-sensitive products are non-returnable items. Items returned to DME without prior authorization(RMA)may be returned to sender. Items returned for stated defect or non-conforming reason require detailed explanation. No products are returnable beyond 30 days after receipt.
9. CONFIDENTIALITY. Any nonpublic information, including without limitation, Seller's pricing information and the contents of Seller's quotation or proposal and Buyer's purchase order, exchanged between the parties is deemed confidential ("Confidential Information"). Each party agrees to maintain the other party's Confidential Information in confidence, to not disclose the same to any third parties, and to use it only in connection with this sale. These restrictions shall expire two (2) years after the date of disclosure. This provision does not modify or supersede any separate confidentiality or nondisclosure contract signed by the parties.
10. FORCE MAJEURE: Seller shall not be liable for any delay in performance or nonperformance which is due to war, fire, flood, pandemic, acts of God, acts of third parties, acts of governmental authority or any agency or commission thereof, accident, breakdown of products, differences with employees or similar or dissimilar causes beyond Seller's reasonable control, including but not limited to, those interfering with production, supply or transportation of products, raw materials or components or Seller's ability to obtain, on terms Seller deem reasonable, material, labor, products or transportation.
11. MERGER CLAUSE: This Contract entirely supersedes any prior oral or written representations, correspondence, proposals, or contracts between the parties regarding the products. This writing constitutes the final and total expression of such contract between the parties, and it is a complete and exclusive statement of the terms of that contract.
12. ASSIGNMENT: Neither party may assign this Contract without the written consent of the other party, except that Seller may assign this Contract to a third party that acquires substantially all of Seller's assets and Seller may assign the flow of funds arising out of this Contract.
13. COMPLIANCE WITH LAWS. Each party agrees to comply with all applicable laws in the performance of its obligations; Buyer shall not trans-ship, re-export, divert or redirect Products outside of the original country of delivery without Seller's prior written consent.
14. GOVERNING LAW: This Contract shall be governed by and construed in accordance with the laws of the State of Michigan, without regard to the Convention for the International Sale of Goods (CISG), which shall not apply.

Sales and Ordering Information

U.S.A.

TERMS AND CONDITIONS OF SALE: See previous page.

PHONE ORDERS – TOLL FREE: 800-626-6653. DME's Customer Service Dept. operates Monday through Friday from 7 a.m. to 7 p.m. E.S.T. Calls can be made from anywhere in the continental U.S. and Puerto Rico (Puerto Rico: use "137" prefix instead of "1"). Our Customer Service Representatives will be happy to answer your questions on DME products or services, provide on-the-spot feedback on product availability and shipping details, or take any messages you wish relayed to your local DME sales, manufacturing or technical service representatives.

MAIL ORDERS: If you prefer to order by mail, please address your order to:

- DME Company, 29111 Stephenson Highway, Madison Heights, Michigan 48071-2330
  ATTN: Customer Service Dept.

FAX: You may fax your order to:

- DME Customer Service
  888-808-4363

EMAIL: You may email your order to:

- DME Customer Service
  customer_service@dme.net

eStore : store.dme.net

CHECKS OR MONEY ORDERS: When paying invoices by check or money order, please make payable to DME Company. Include remittance copy of invoice and mail to:

- DME Company, PO Box 854867 Minneapolis, MN 55485-4867

WALK-IN ORDERS, PICK-UPS AND RETURNS: If desired, ordered products in stock at your nearest DME Service Center can be picked up rather than shipped. Walk-in orders at Service Center locations can also be processed while you wait. Products being returned for repair or exchange should be processed through Customer Service prior to being returned.

SPECIAL MACHINING SERVICES: Prints for quotation on special machining work can be sent by EDI to dme_cad@dme.net or mailed to the Estimating Department of the DME manufacturing location nearest you. Call our toll-free number if desired to clarify location which serves your area.

Estimating locations are:

- 29111 Stephenson Highway, Madison Heights, MI 48071, FAX: 888-808-4363
- 1117 Fairplains Street, Greenville, MI 48338, Tel. 616-754-4601, FAX: 616-225-3924
- 3275 Deziel Drive, Windsor, Ont N8W 5A5, Tel. 519-948-5001, FAX: 519-948-4652

Please add "DME Company" and "Attn: Estimating Dept." to above addresses when mailing prints. To obtain prices and delivery on special mold base orders or to check status of special work in progress please contact Customer Service.

CANADA

TERMS AND CONDITIONS OF SALE: See previous page.

ORDERS, QUOTES, PICKUPS, RETURNS: Please contact 800-387-6600.

CHECK OR MONEY ORDERS: Make payable to DME Company. Include remittance copy of invoice and mail to:

SmartLock® Slide Retainer and Limit Switch

(U.S. Patent No. 6,126,429)

Available via

eSTORE

store.milacron.com

The SmartLock® slide retainer and limit switch is designed for injection molders to provide switching and a slide detent in one unique package. The SmartLock locking function prevents premature slide movement during molded part ejection while the SPDT switch is simultaneously actuated.

The SmartLock slide retainer and limit switch has been tested for reliability over 10 million cycles without failure. Two or more switches may be used for larger molds, or molds with multiple slides. Slide position verification and prevention of mold damage results when the Smartlock slide retainer and limit switch is installed in a mold.

- Prevents damage caused by premature slide movement
- 17 to 27 pounds holding force – adjustable for optimum operation
- 175°F (79.4°C) standard temperature rating enables use for most molding applications
- Quality tested over 10 million cycles to provide long, dependable service
- Flush-mounted switch is shielded from damage by mounting inside a protective milled pocket
- Stripped and tinned 6 ft. wire leads make the switch ready to install without modification
- Mounting screws and wire clips supplied for neat and easy installation

SLIDE ACTION COMPONENTS

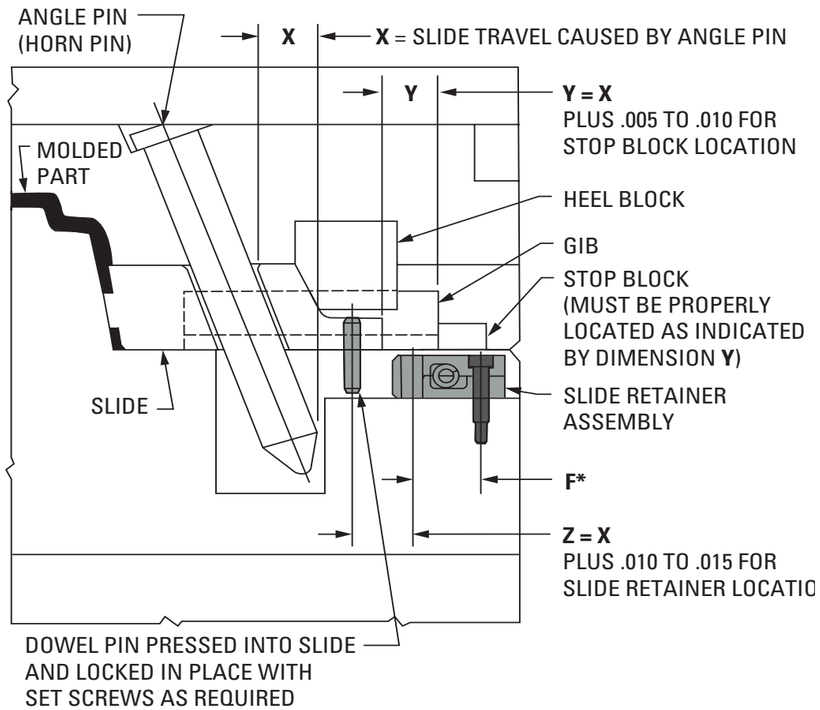
Slide Retainer Assemblies

The DME Slide Retainer provides a compact and economical means of slide retention, which makes obsolete the cumbersome external spring or hydraulic methods. Its simple and positive operation makes it equally suitable for new tooling design or retrofitting existing molds. Available in three sizes with increasing weight-holding capacities, the Slide Retainers can be used individually or in multiples for larger or heavier slides.

Generally mounted behind and below the slide (see drawing at right), the DME Slide Retainer is a compact unit that can be entirely contained within the mold. Interference with machine tie bars or safety gates is no longer a problem. (It can even be installed completely underneath the slide if space is limited.)

As the mold opens, the dowel pin installed in the slide positively locks into the retainer until disengaged by the mold's closing action. The custom-designed spring placed crosswise in the retainer maintains the force required to keep the dowel pin in the jaws when the mold is open.

The Slide Retainer is designed with a generous lead-in at the jaw opening so the dowel pin will enter the jaws even if there is a slight misalignment between the retainer and the pin.



NOTE:

To prevent the dowel pin from contacting and applying pressure against the back of the retainer jaw (which could cause bending or shearing of the dowel pin or hold-down shoulder screw) the installation dimensions shown on these pages are recommended.

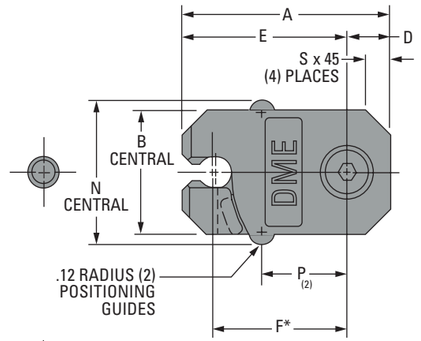
DME

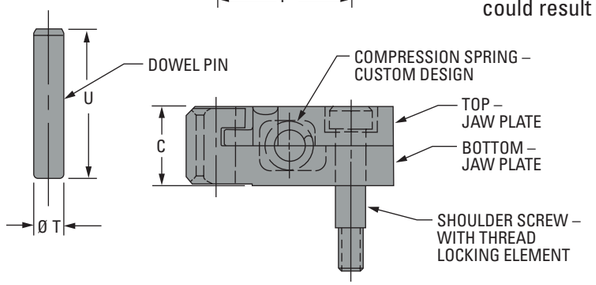
SLIDE ACTION COMPONENTS

Slide Retainer Assemblies

Slide Retainer Assemblies – PSL

U.S. Patent No. 4,961,702





ITEM NUMBER	A	B	C	D	E	F*	N	P	S	T	U

ITEM† NUMBER	MAXIMUM RECOMMENDED HOLDING WEIGHT
PSL0001	22 POUNDS
PSL0002	44 POUNDS
PSL0003	88 POUNDS

HOW TO ORDER:

Use Item Numbers in charts for ordering.

Material: Investment Cast from 8620 steel
Hardness: Case-Hardened 58-62 HRC

†Includes top and bottom jaw plate, compression spring, shoulder screw with thread locking element and dowel pin.

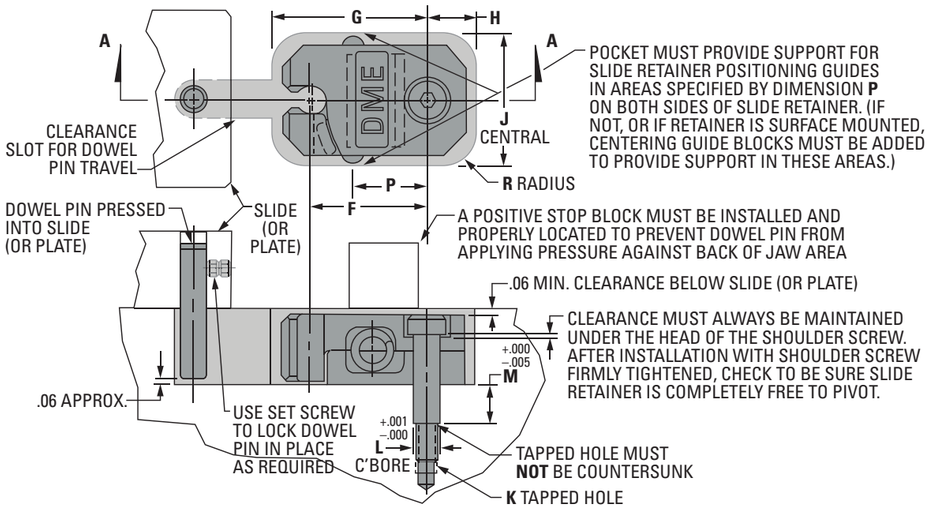
*Dimension F, the distance from dowel pin centerline at end of slide travel and centerline of shoulder screw, is important. Overtravel of dowel pin beyond clearance provided at back of jaw area could result in damage to retainer..

All items in stock.

Pocket Dimensions/Installation Guidelines

(Slide Retention Application Shown)

Section A-A



ITEM NUMBER	F	P	G	H	J	R RAD	K TAPPED HOLE AND TAP DEPTH BELOW C'BORE	L C'BORE	M C'BORE DEPTH
PSL0001	0.980	0.61	1.35	.39	1.00	.31	#10-24 X .50 DEEP	.249	.310
PSL0002	1.375	0.88	1.81	.56	1.50	.37	1/4-20 X .56 DEEP	.3115	.430
PSL0003	2.125	1.57	2.75	.88	2.00	.50	5/16-18 X .62 DEEP	.374	.580

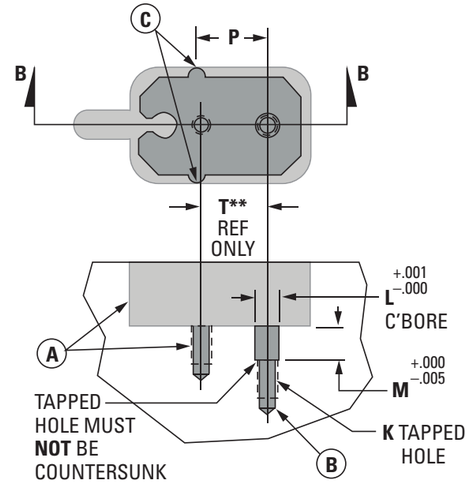
NOTES:

1. Dimension F, the distance from dowel pin centerline at end of slide travel and centerline of shoulder screw, is important. Overtravel of dowel pin beyond clearance provided at back of jaw area could result in damage to retainer.

SLIDE ACTION COMPONENTS
Slide Retainer Assemblies

NOTES:

1. Lubricate all metal-to-metal contact areas before first use and every 100,000 cycles (or more frequently as required). Use a good grade of moldmakers' non-melting type grease rated for the operating temperature to be encountered.
2. **Do not operate at temperatures exceeding 225°F.**
3. If two or more retainers are used, mount them uniformly to provide a balanced operation. Retainer sizes should not be mixed in a multiple retainer application.
4. Surface to which retainer is mounted should not prevent retainer from pivoting freely.
5. Replace retainer assembly and/or dowel pin when total wear in jaw area or on dowel pin exceeds .010.
6. Replace compression spring every 1,000,000 cycles or as required, following procedures packaged with retainer.



Section B-B

Retrofit Data for Molds with Previous Design Slide Retainers

ITEM NUMBER	K TAPPED HOLE AND TAP DEPTH BELOW C'BORE	L C'BORE	M C'BORE DEPTH	P	T** REF ONLY	FOR REPLACEMENT OF SLIDE RETAINER ITEM NUMBER

Dimension **T is for reference only. See charts and application drawings to determine specific installation dimensions.

HOW TO ORDER: Use Item Numbers in charts for ordering. **All items in stock.**

NOTES:

A. Existing pocket and tapped hole for previous slide retainer (MRT22, 44 or 88).
B. Drilling, tapping and counterboring for shoulder screw at new location is required per drawing and chart dimensions.
C. Existing pocket must provide support for retainer positioning guides in areas designated by dimension P or centering guide blocks must be added.

SLIDE ACTION COMPONENTS

Slide Retainer Actuation Sequence Section Views

Mold Closed

Step 1: Mold is closed, Sliding cores are in position for molding parts

Mold Open

Step 2: Mold is fully open. Movement of the B-side of molds causes A-side angle pins to push sliding cores away from stationary cores. Sliding cores must lock in position via slide retainers to ensure proper mate with angle pins when mold closes.

Ejection

Molded part ejects. After ejection the mold may close. Angle pins will mate up with angle pin holes in sliding cores, pushing sliding cores towards the stationary cores.

Installation Notes

1. Ø A dimensions specified for hole will provide approximately .000 to .001 clearance with the Ø P or press fit area of the angle pins. Moldmaker to adjust Ø A hole dimensions to obtain specific fit required.
2. Cut angle pin to length as required to achieve desired travel on slide.
   Typically, a spherical radius or cone shape with a spherical radius is machined on end of angle pin (opposite the head).
3. Spherical radius on head is suitable for angles up to and including 20°.

Additional machining and installation data is available. Contact DME.

All items in stock.

HOW TO ORDER: Use Item Numbers in charts for ordering.

SLIDE ACTION COMPONENTS

Angle Pin Inserts

DME Angle Pin Inserts are pre-machined with 10°, 15° or 20° angle holes and are supplied with a flat machined to facilitate keying to prevent rotation. They are sized to accommodate DME standard angle pins.

- Pre-machined with 10°, 15° or 20° angle hole... eliminates costly angle set-ups and machining
- 51 size/angle combinations to suit most applications

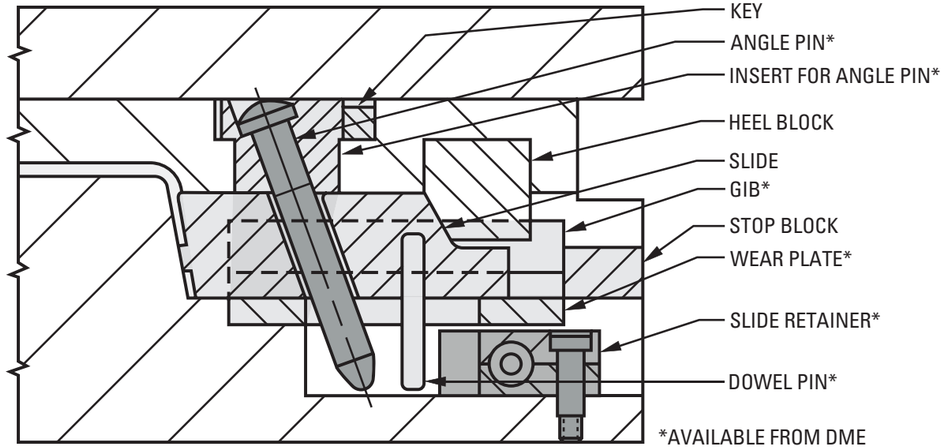
HOW TO ORDER: Use Item Numbers in charts for ordering.

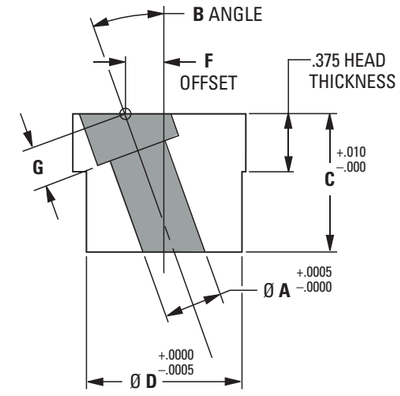
SLIDE ACTION COMPONENTS

Angle Pin Inserts



Typical Application

Material: AISI 420 Type Stainless Steel **Hardness:** 32-38 HRC



NOTE: Mold machining and installation data is available. Contact DME.

All items in stock.

SLIDE ACTION COMPONENTS

Metric Angle Pins (Guide Pins)

Can be used as angle (CAM) pins or as straight leader pins.

Material: DIN 1.7131 (AISI 5115 Type) Steel
TYPE: APD

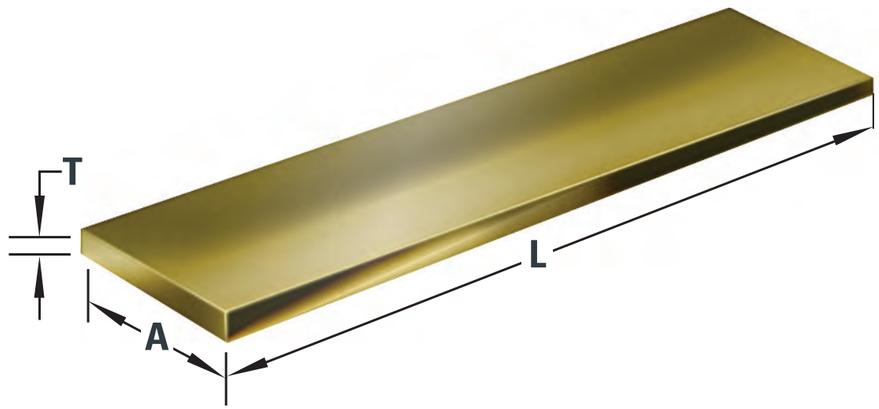
Bronze-Plated Wear Plates

Bronze-Plated Wear Plates – WPB



DME Bronze-Plated Wear Plates provide a long-lasting wear surface for Bronze- Plated molds requiring slides, cams or flat surfaces where frictional wear is a factor.

- Bronze plating of .008 to .010 thickness applied to the top surface of flat steel plates
- Close tolerance on thickness of +.000/-.002
- Easy to machine, saving time and tools
- No pre-drilled holes – allows flexibility in mounting patterns

1. **Item Numbers from tables**
2. **Plate length**
3. **Number of pieces**
4. **Method of shipment**

*To calculate weight, multiply the weight per inch by the number of inches (length) desired.

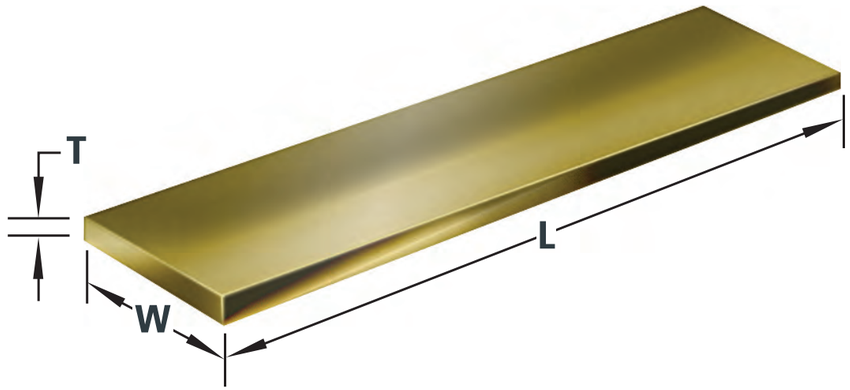
NOTE:

Wear Plate lengths are available in one-inch increments.
Cut length is provided with an additional 1⁄16 to 1⁄8 inch in length for machining. Minimum cut length is 3 inches (76.2mm)..

SLIDE ACTION COMPONENTS

Bronze-Plated Wear Plates – Metric

Bronze-Plated Wear Plates – WPM Metric



DME Bronze-Plated Wear Plates provide a long-lasting wear surface for Bronze-Plated molds requiring slides, cams or flat surfaces where frictional wear is a factor.

- In order to be flat this material must be fastened to a flat surface
- Parallel 0.025in. (0.635mm) within 47.992in. (1219mm)
- Thickness of bronze: 0.20in. to 0.25in. (5.08mm to 6.35mm)
- Milled edges

Standard wear strips are plated on one side only. Up to four sides can be plated, call DME for a cost quotation.

NOTE:

Machining may cause distortion which can result in the loss of flatness of the part. Once altered, DME will not replace wear strips.

DME offers custom wear strips that meet your application needs. Please send your prints to DME@dme.net to receive a cost quotation.

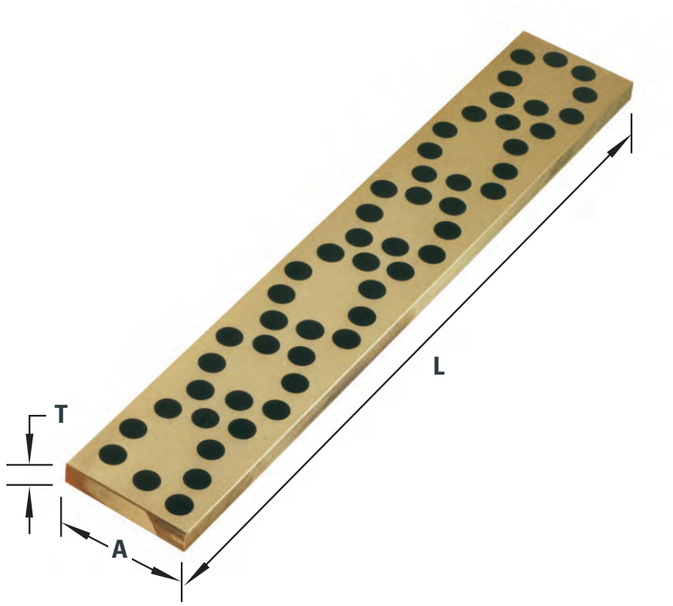
Self-Lubricating Wear Plates

Self-Lubricating Wear Plates – SLP



Material: Aluminum Bronze with Graphite Plugs **Hardness:** 179 Bhn

DME Self-Lubricating Wear Plates provide a long-lasting wear surface for molds requiring slides, cams or flat surfaces where frictional wear is a factor.

- Low coefficient of friction
- No pre-drilled holes – allows flexibility in mounting patterns
- Standard plug pattern designed for maximum surface lubrication
- Close tolerance to ease installation

HOW TO ORDER: Use Item Numbers in charts for ordering.

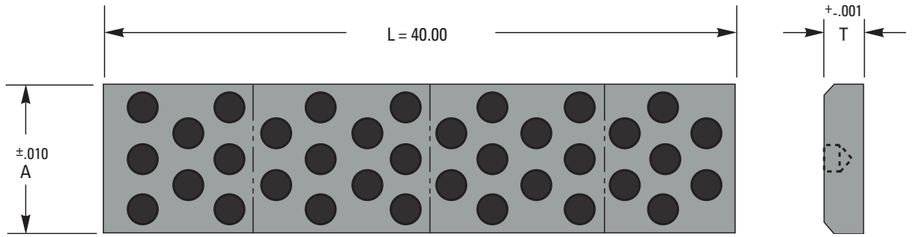
SLIDE ACTION COMPONENTS

Self-Lubricating Wear Ways

Self-Lubricating Wear Ways – SLW

- Well-suited for custom applications
- Standard plug pattern facilitates cutting to a variety of lengths
- No pre-drilled holes – allows flexibility in mounting patterns

Material: Aluminum Bronze with Graphite Plugs
Hardness: 179 Bhn



NOTE: All DME Self-Lubricating Wear Ways are supplied in 40" lengths.

DME Self-Lubricating Wear Ways are supplied in 40-inch lengths. The plug pattern is consistent throughout the surface of the Wear Way, so that the Wear Way may be cut to a variety of lengths. Mounting holes are not supplied so that they may be drilled to suit custom applications.

Typical mounting procedure is to machine out the plug location to use for mounting screws. (See "Suggestions for Fastening" below.)

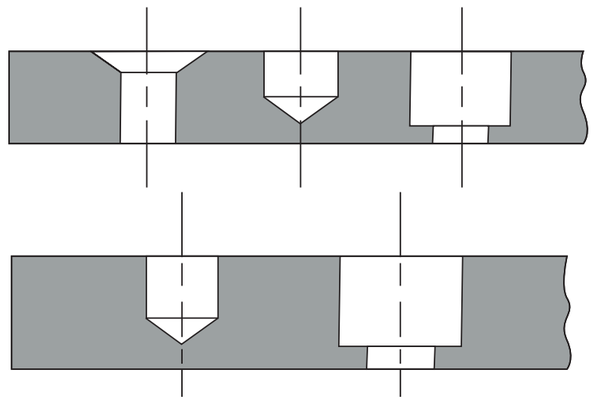
DME

SLIDE ACTION COMPONENTS

Self-Lubricating Wear Ways

Suggestions for Fastening

Typical mounting procedure is to use plug location for screw location.



NOTE: For 3⁄8" thicknesses, the suggested screw is a 1⁄4 flathead screw (or 1⁄4 socket head screw max).

NOTE: For 1⁄2", 5⁄8", 3⁄4" thicknesses, the suggested screw is a 3⁄8 socket head screw max.

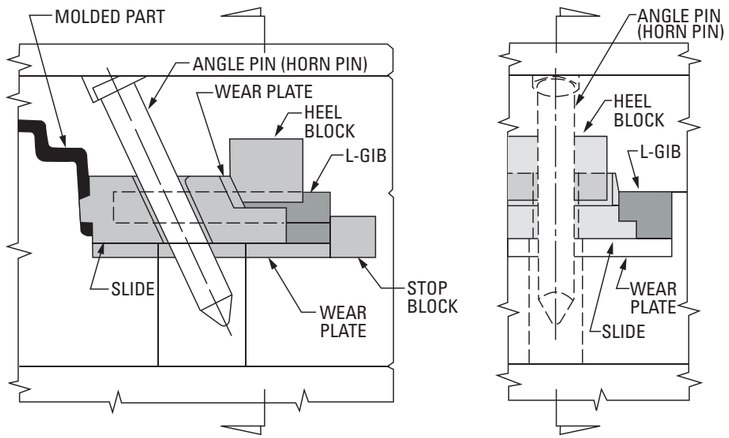
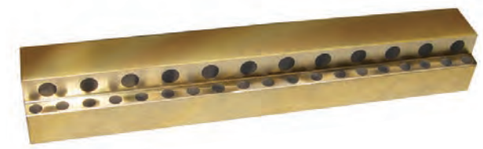
Typical Applications of L-Gibs and Wear Plates

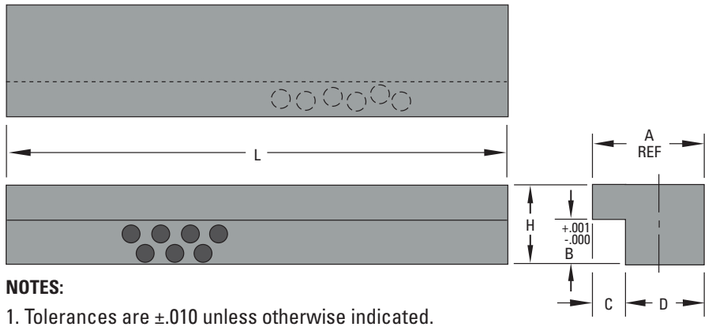


SLIDE ACTION COMPONENTS

Self-Lubricating L-Gibs



- Low coefficient of friction
- No pre-drilled holes – allows flexibility in mounting patterns
- Close tolerance



NOTES:

1. Tolerances are ±.010 unless otherwise indicated.
2. Graphic plug pattern varies by product size.

DME Self-Lubricating L-Gibs provide a long-lasting wear surface for high-production molds using slides and cams. L-Gibs are easy to machine and can be shaped to any configuration, requiring no special tools.

They are supplied with no pre-drilled holes, providing the designer with flexibility in mounting patterns. This allows the designer to work around water lines and other components in the mold.

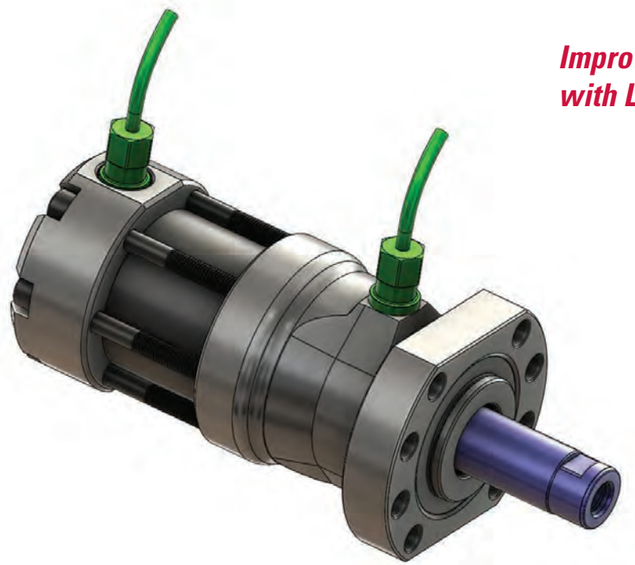
DME HYDRAULIC LOCKING CORE PULL CYLINDERS FOR PLASTICS AND DIE CAST TOOLS

ENABLING COST-SAVING MOVEMENT OF SLIDING CORES

HYDRAULIC LOCKING CORE PULL CYLINDERS

Benefits, Cost Savings and Product Overview



Improved sensor design with LED indicator

Product Benefits

- Withstands high loads
- Large locking surfaces promote extended service life
- Pulls sliding cores in injection molds and die cast tools
- Withstands temperatures up to 356°F (180°C)*
- Proximity sensors recognize full forward and full reverse

*Refer to Note #1.

System Cost Savings

Cost savings achieved when the Hydraulic Locking Core Pull Cylinder is used instead of traditional methods:

- Mold design and manufacturing time
- Mold fitting and assembly time
- Mold maintenance time
- Material cost (smaller mold base required)
- Cycle time reduction

NOTES:

1. When using proximity sensors standard to Core Pull Cylinders, the cylinder assembly will withstand temperatures up to 212ºF (100ºC).
2. When an external method for sensing sliding core position is used, the cylinder assembly will withstand temperatures up to 356ºF (180ºC).
3. Proximity sensors are replaced by plugs - Item# (WD81NANON)

HYDRAULIC LOCKING CORE PULL CYLINDERS

Benefits, Cost Savings and Product Overview

Product Overview

When designing molds with sliding cores, the mold designer is often faced with the challenge of fitting all traditional components in as small a mold base as possible. There are different methods of actuating a sliding core, the most common of which uses horn or angle pins (Fig. 1) to move the slide when the mold opens or closes. Heel blocks are normally used behind the sliding core to withstand injection pressure acting on the sliding core. Not only do these components use up precious mold space, but they are tied to the movement of the platen. Some molded parts also require that the sliding core be moved prior to opening a mold. While it is possible to use standard cylinders (Fig. 2) to actuate the sliding core or heel block, typical designs require additional mold design and machining, and waste mold space.

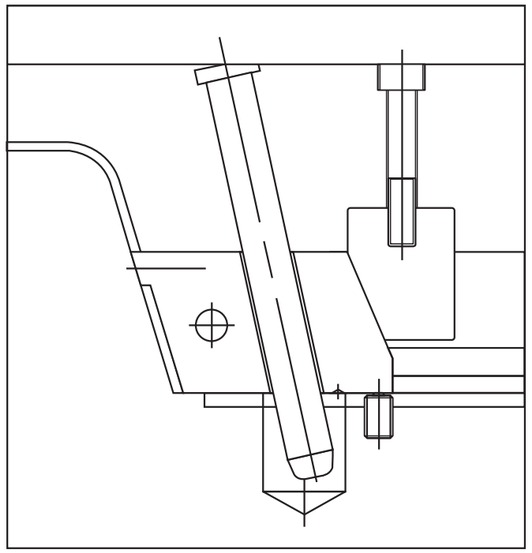


Fig. 1. Slide Movement example using an angle pin and locking with a heel block (wedge).

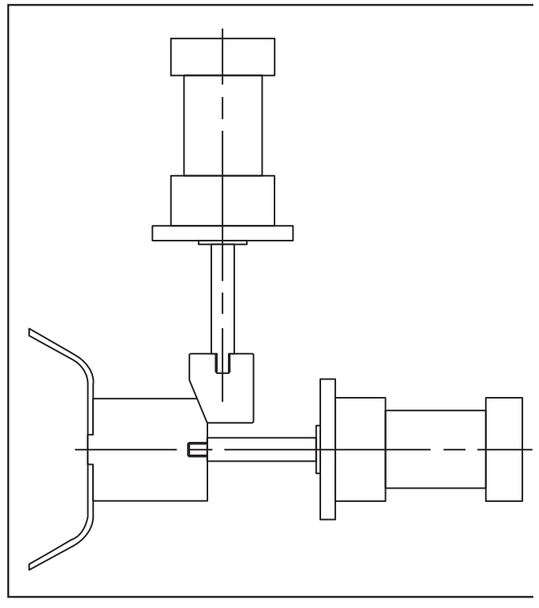

Fig. 2. Slide Movement example using a hydraulic cylinder to actuate slide, and a separate cylinder to actuate the heel block.

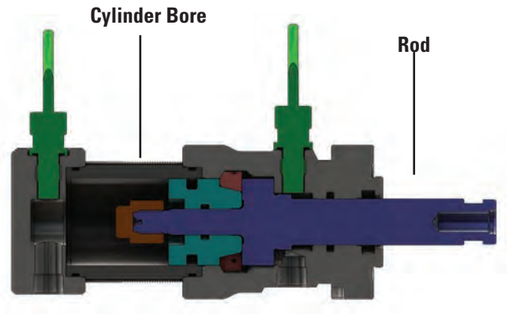
HYDRAULIC LOCKING CORE PULL CYLINDERS

The HLCP Cylinder Advantage

The Hydraulic Locking Core Pull (HLCP) Cylinder replaces traditional slides and heel blocks, enabling independent movement of the sliding core while eliminating the need for a heel block. By using a segmented ring that presses into an internal groove inside the cylinder assembly while in closed position, the injection pressure from the part cavity acts against the cross section of the segmented ring, eliminating the need for heel blocks.

Eliminating separate heel blocks or additional cylinders can result in a smaller mold base size, simplifying mold designs and increasing cost savings!

The HLCP Cylinder is a robust, compact design. Available in seven sizes, each size has two available standard strokes. Due to the modular design of the HLCP Cylinder, special strokes are available upon request with quick delivery. The cylinder is constructed of hardened steel for extra long service life. Because of the cylinder's special design and breadth of assembly sizes available, a wide range of holding forces are possible with a hydraulic holding pressure of only 870 PSI minimum.



NOTES:.....

Special stroke lengths are available upon request.
Shown with required spacer used for setting preload when shutting off on core face.

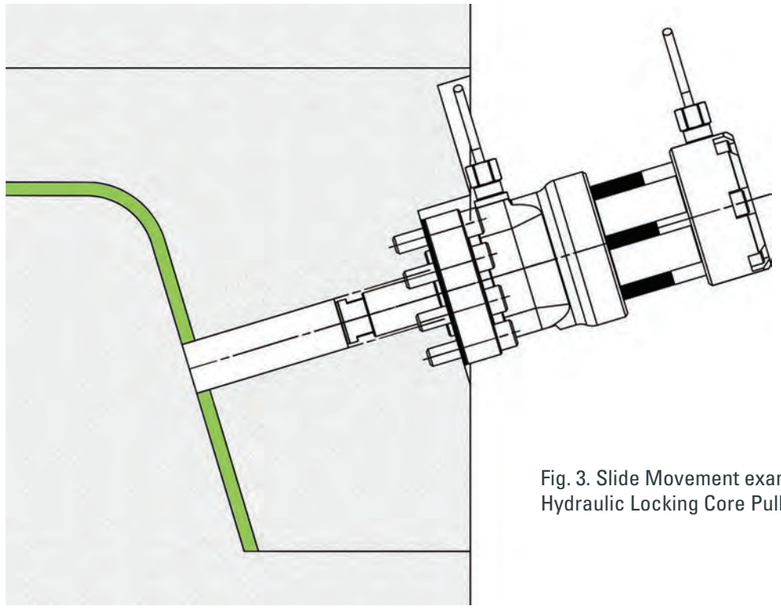


Fig. 3. Slide Movement example using the Hydraulic Locking Core Pull Cylinder.

HYDRAULIC LOCKING CORE PULL CYLINDERS

The HLCP Cylinder Advantage

The HLCP Cylinder operates between fully opened and fully closed positions, both of which are sensed by high pressure proximity sensors without any mechanical contact. The HLCP Cylinder has a built-in cushion at the fully retracted end of the piston stroke, extending the service life of the cylinder.

The HLCP Cylinder's integral flange allows easy installation and mounts to the mold using socket head cap screws. Socket head cap screw sizes used for mounting the HLCP Cylinder to the mold are UNC-type. A spacer plate (shim) is supplied with the HLCP Cylinder for installation beneath the HLCP Cylinder flange, enabling fine adjustment in the mold. The spacer plate also provides important preload on the cylinder rod, particularly when the sliding core must shut off against the opposing wall of the core. Hydraulic fittings are NPTF-type fittings.

Due to the nature of the flange mounting design, the same size HLCP Cylinders are easily interchangeable. The cylinder's flange and screw mounting method ensures that the proximity sensors will always be positioned in the same orientation when the HLCP Cylinder is installed to the side of the mold.

NOTES:

Sensors require power.*

* NPN and PNP sensors function in a similar manner, except the power supply polarities are reversed for each type. NPN inductive sensors are more common in North America, while PNP is more common in Asia and Europe. If PNP is not requested, the cylinders will be delivered with NPN sensors, even for special orders.

HYDRAULIC LOCKING CORE PULL CYLINDERS

Mold Design & Installation Considerations

Available in seven sizes, each size of the Hydraulic Locking Core Pull Cylinder has two available “standard” stroke lengths. If a stroke is required that is different than the available standard strokes, then a non-standard stroke design is required. When ordering this product, specify the required stroke if the available standard strokes are not suitable for the intended application.

HYDRAULIC LOCKING CORE PULL CYLINDERS

Mold Design & Installation Considerations

The HLCP Cylinder maintains a sliding core in full back (retracted) or full forward (extended) positions. In order for the cylinder assembly to "lock", the piston must be fully extended forward. This product's provided spacer plate is placed between the front of the body flange and pocket installation. The spacer plate must be properly ground to ensure suitable fit at the desired mold operation temperature. The adjustment of the spacer plate is important for when the sliding core must "shut off" against an opposing core wall or face, so that plastic flashing is avoided.

Positional alignment of the cylinder assembly is achieved by aligning the forward collet of the cylinder body (protrudes forward of the mounting flange) into the mold plate via the outer diameter of the collet. The collet will protrude past the spacer plate. Rotational alignment of the overall assembly is achieved via the mounting screws, as rotational alignment is only used to position the proximity sensors and hydraulic fitting connections and/or hoses within the overall installation. The piston may freely rotate; therefore, if rotational alignment of the sliding core is required, rotational alignment of the sliding core must be achieved via other means.

While recommended installation pocket details are based on the cylinder assembly being recessed into the side of the mold plate, it is possible to have the cylinder assembly mounted fully "proud" of the side of the mold plate. However, positional alignment of the cylinder assembly to the mold plate requires the forward collet (protruding forward of the mounting flange of the cylinder body) to be recessed partially into the side of the mold. An overall installation adjustment is required to fit each application, while maintaining minimum clearances for the hydraulic fitting connections and/or hoses, as well as maintaining clearances for the proximity sensors.

Cylinder size required:

Select Size Option:

☐ 060 ☐ 100 ☐ 150 ☐ 200 ☐ 300 ☐ 500 ☐ 750

Please refer to the DME Mold Components catalog for more details on the rated load capacity for each cylinder size.

Note: Load capacity is reduced if preload is required.

Piston rod stroke required:

_____ [inches]

Please refer to the DME Mold Components catalog for standard stroke lengths available.

Note: For proper operation, the piston rod needs to be actuated over the full stroke. If you require a stroke length that is different than what is offered as standard for the desired cylinder size, then a special HLCP cylinder is required.

Type of Inductive Proximity Sensor required:

Please select one:

☐ NPN ☐ PNP

Note: The inductive proximity sensors supplied are standard NPN, unless otherwise specified at the time of order. Both NPN and PNP inductive proximity sensors require power to generate a signal. If your injection molding machine has only dry contacts, please refer to the packing slip (installation instructions) for a suggested alternative wire-up using a 3rd party DC relay, or use external limit switches in your mold.

☐ *All of my requirements are standard; I do not require Engineering to review my application, and I do not need to complete the rest of the form.*

Area of sliding core face (in the molded part):		[square inches]
Peak injection pressure in the molded part cavity:		[PSI]
Does your application require preload? (Are you intending to form a "window" in your molded part?)	☐ Yes	☐ No
If "yes", what is the shut-off area on the sliding core?		[square inches]
Piston Rod Load capacity required:		[pounds]

☐ *I have special requirements; I need Engineering to review my application and the entire form is complete.*

KRYTOX™ TM7 GREASE

The "Stay-Put" Lubricant

Extreme Conditions. Extreme Performance.
Chemour Krytox™ TM7 grease is specifically designed for the lubrication of segmented molds, both electrically and steam-heated. This lubricant eliminates carbon residue buildup on the molds associated with hydrocarbon and hydrocarbon-based synthetic greases. It exhibits excellent adhesion and will not bleed out to the parting line due to high heat tolerance, allowing the operator to significantly increase production by extending lubrication intervals.

Krytox TM7 is a fluorinated grease with polytetrafluorethylene (PTFE) thickeners and selected additives. It has excellent thermal stability and load-carrying abilities. TM7 has a high degree of chemical inertness and extremely high hydrolytic stability. Contact with boiling water or steam has no effect on this product, it will stay in the location it was applied, providing the best lubrication possible.

UNILIFTER® UNDERCUT RELEASING SYSTEM

UniLifter® Design Guidelines

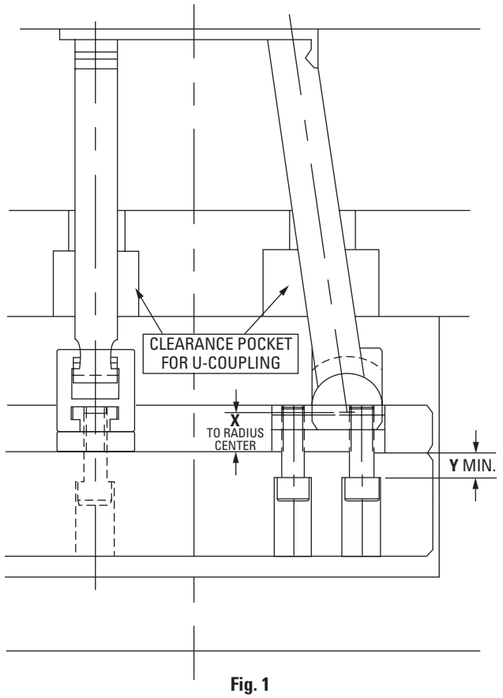

Fig. 1

Design Guidelines

1. **General Installation**

   It is recommended that lifters be installed as shown in **Fig. 1**, with T-Gib mounted to top of ejector plate. The appropriate **X** and **Y** dimensions are as follows (min. Y dimension prevents mounting screws from interfering with U-Coupling travel):

SERIES	X	Y MIN.
.250	.469	.78
.500	.406	.37

SERIES	X	Y MIN.
1.000	.375	71
10	12mm	11mm

2. **Angles**

   Designs using angles from 5 to 10 degrees will typically yield the best results. Angles up to 15 degrees are permissible by using lifter guides in the bottom of the support plate. (Lifter guides to be made by moldmaker).

3. **Lifter Guides**

   Lifter guides are recommended for designs with angles of 15 degrees (see 2 above) or whenever less than half of the core blade is bearing in the core insert.

4. **Guided Ejection**

   It is recommended that guided ejection be used in all designs.

5. **Fit and Finish**

   Recommended clearance for core blade is .001–.0015" (.025–.038 mm) where permissible. Although standard core blades are approximately 10 Rc above P-20 and 10 Rc below hardened tool steel, additional performance can be obtained by treating after finish machining (TiN coating, chrome flash, etc).

6. **Locking Angles**

   Locking angles (see **Fig. 2**) may be designed in if required to provide a locking surface to counter against molding pressure.

7. **Non-Standard Shapes/Materials**

   L-shaped core blades as shown in **Fig. 3** may be machined by removing stock from thicker core blades. Material from the heel area should not be removed. The bearing dimension **T-1** should be on the same center as radius **R**.

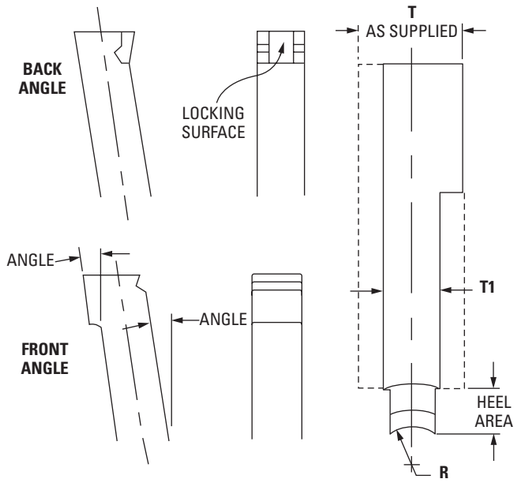

Fig. 2

Fig. 3

L-shaped core blades, or blades made from other materials can also be supplied on special order. Contact DME for details.

DME VECTORFORM LIFTER SYSTEMS

TAKING LIFTER SYSTEMS TO THE NEXT LEVEL

Table of Contents

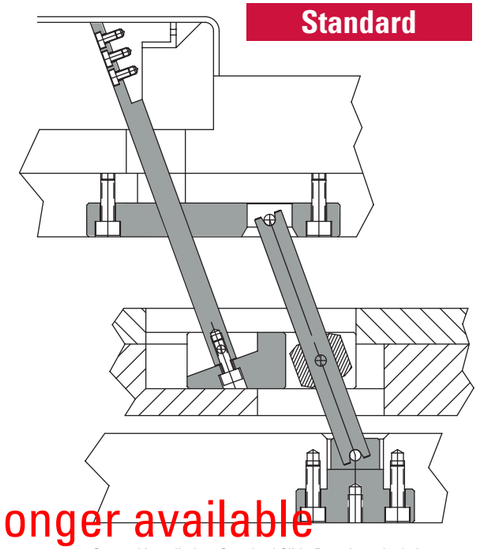
VECTORFORM LIFTER SYSTEMS

Overview

VectorForm Lifter Advantages

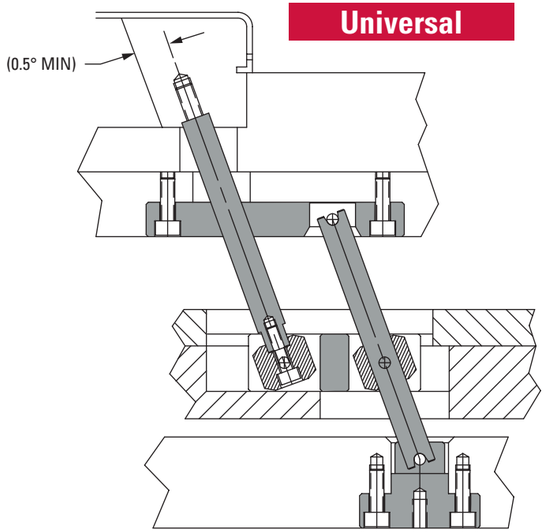
- 30˚+ Angle – Half the stroke for the same undercut
- Simple plate machining
- Easy installation
- May be ganged
  - Multiple systems may be “ganged” to lift a large lifter core
  - A single system can lift multiple lifter cores
- Accelerate or decelerate the motion of the lifter core relative to the ejector plate
- Cooling may be added
- Design flexibility is improved

Standard



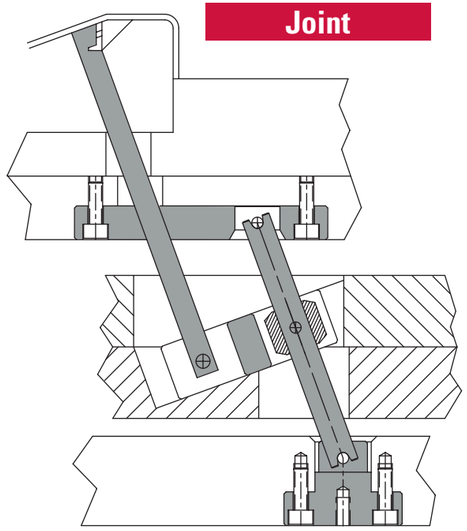
General installation. Standard Slide Base in typical ejector plate installation shown.

Universal



Universal Slide Base shown in typical ejector plate installation.

Joint



Angled Slide Base installation may be used to accelerate or decelerate the action of the VectorForm Lifter System. In this example, the VectorForm Lifter System movement is decelerated relative to the movement of the ejector plate.

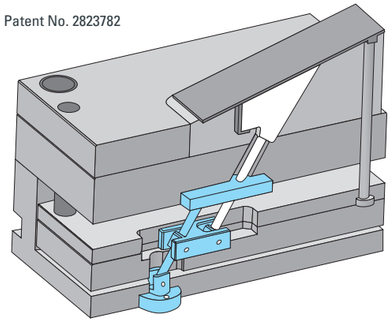
VECTORFORM LIFTER SYSTEMS

Overview

VectorForm Lifter System Features & Benefits

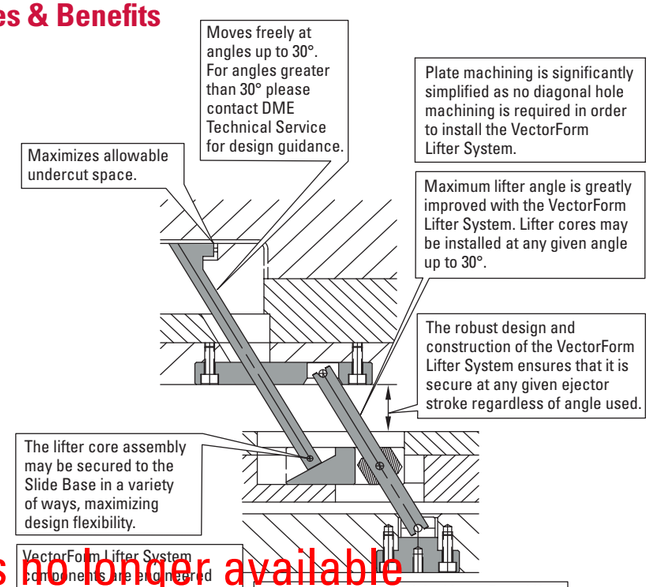
Patent No. 2823782



DME Supplied

Customer Supplied

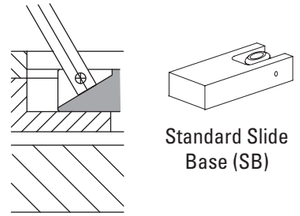
VectorForm Lifter Systems maximize design flexibility and offer ease of installation into most lifter applications.



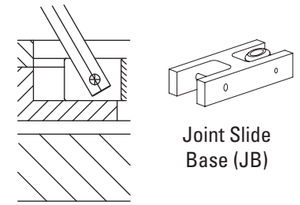
VectorForm Slide Bases

VectorForm Lifter Systems offer three types of slide bases to meet the needs of your applications.

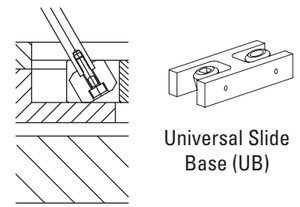
- The **Standard Slide Base** (SB) is the most flexible and the most economical slide base. The Standard Slide Base can be custom machined by the mold builder to meet specialized application requirements. The Standard Slide Base is also the most robust slide base with respect to loads and forces.
- The **Joint Slide Base** (JB) permits the lifter core assembly to be retained with a single pin.
- The **Universal Slide Base** (UB) is similar to the Joint Slide Base, although the single pin is replaced by a universal joint which offers greater flexibility than the Joint Slide Base (JB) while still requiring only one screw to retain the lifter core assembly.



Standard Slide Base (SB)



Joint Slide Base (JB)



Universal Slide Base (UB)

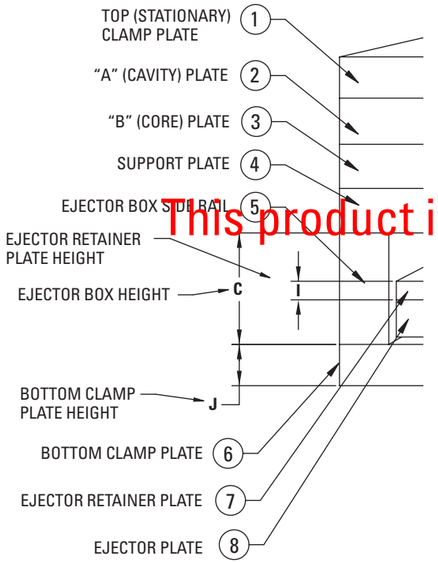
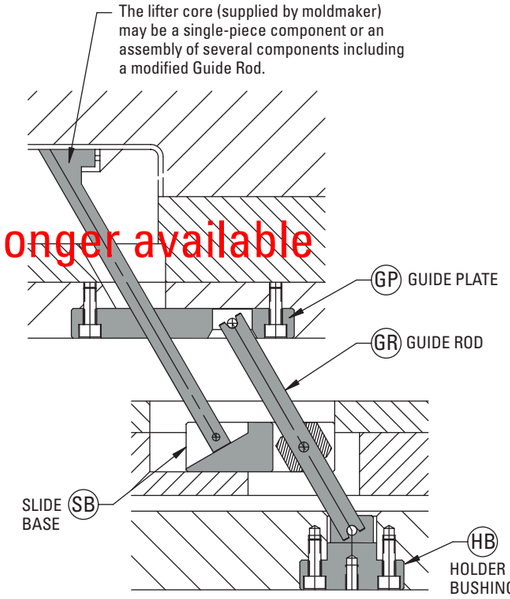
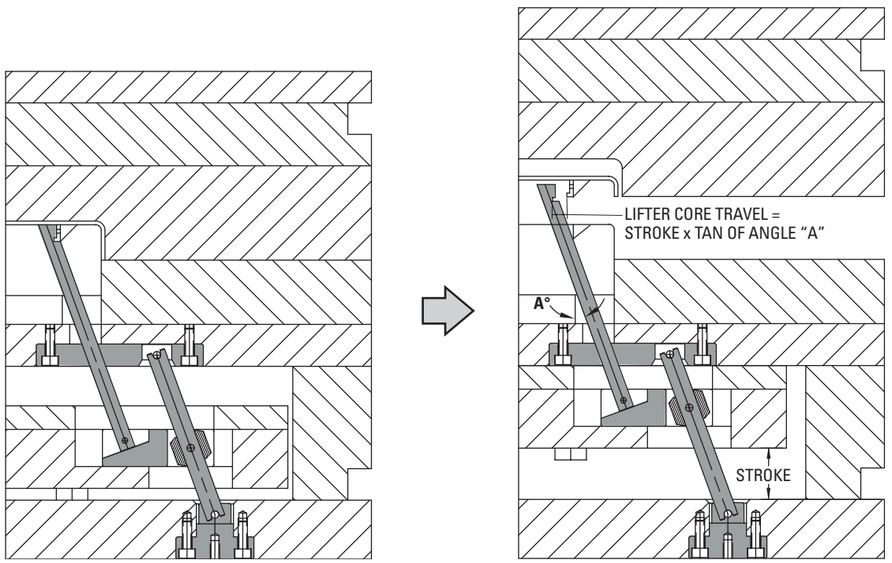
Mold Base Overview



VectorForm Lifter Overview



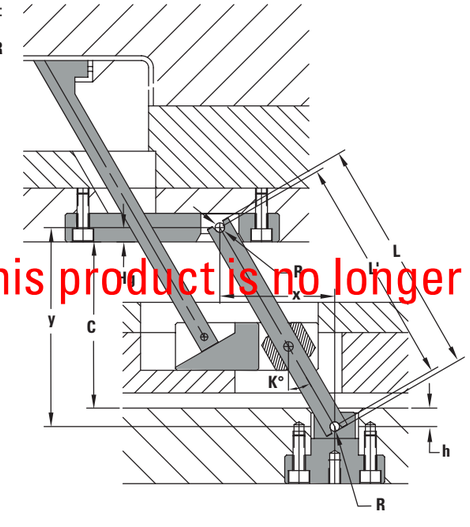
VectorForm Lifter Operating Sequence



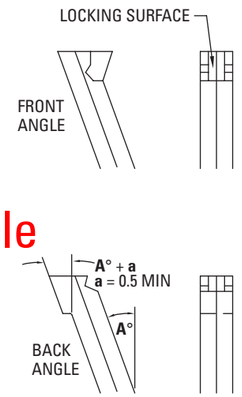
VECTORFORM LIFTER SYSTEMS

Design Guidelines

LENGTH OF GUIDE ROD:
y = C + Hg + h
L' = y/cosK° **L = L' + 2R**



Locking Angles



1. General Installation

- It is recommended that the VectorForm Lifter System be installed as shown above.
- For each given VectorForm set, all components MUST be of the same size. However, separate sets of different sizes may be installed in the same mold.
- Actuation of VectorForm Lifter Systems can be accelerated or decelerated by an inclined sliding surface on the ejector plate and ejector retainer plate.

2. Angles

- The VectorForm Lifter System may be used with angles ranging from 5° (minimum) to 30° (maximum).
- Deep undercuts in the molded part can be obtained by using a larger angle in the lifter core and by increasing the ejector plate stroke.

3. Lifter Core Guidance

- The lifter core must have sufficient guidance in the tool. For multiple lifter cores installed in tandem in the tool, additional guidance in the core inserts is recommended.
- If resistance in actuation is great, an additional Guide Plate may be placed directly below the core insert.

4. Guided Ejection

- Guided ejection is recommended for all designs.

5. Fit and Finish

- Standard component dimensions and Rockwell hardness are provided in the component specifications section of this brochure. Should the standard components need to be modified, additional performance can be obtained by treating after finish machining (TiN coating, flash-chrome, etc.). Component installations can be fitted to suit.
- Ensure a loose fit on the Holder Bushing and Guide Plate installation. Ensure a precise fit between the lifter core and the Guide Plate. The Holder Bushing will automatically align prior to bolting the bushing to the clamp plate.
- Lubrication is not generally required nor recommended. If lubrication is used, it should be low-viscosity.

6. Locking Angles/Component Back-Up

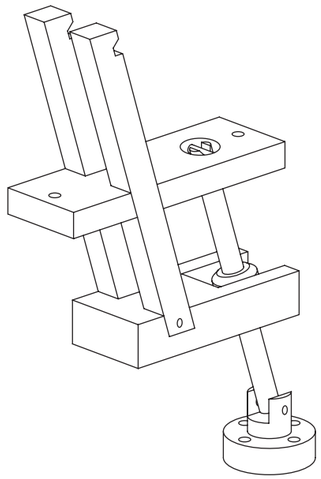
- Locking angles may be designed to provide a locking surface to counter against molding pressure.
- A block construction using a square lifter core can also allow the resin pressure to be backed up by the core insert.
- If the axial load acting on the lifter core exceeds the limit allowed for the slide base pin (used in JB and UB Slide Bases), use a Standard (SB) Slide Base and back the lifter core on the slide by machining a ledge that is perpendicular to the axis of the lifter core. The lifter core must then seat firmly against the angled face of the Slide Base.

7. Non-Standard Shapes/Materials

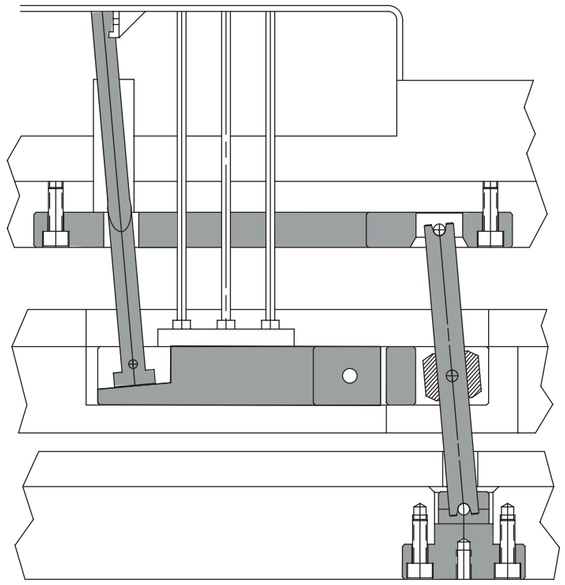
- Lifter core blocks may be machined to any desired shape and size, provided the chosen number and size of the VectorForm Lifter System core standard components will support the lifter core blocks. Lifter core blocks are to be supplied by the moldmaker.

VECTORFORM LIFTER SYSTEMS

Advanced Applications

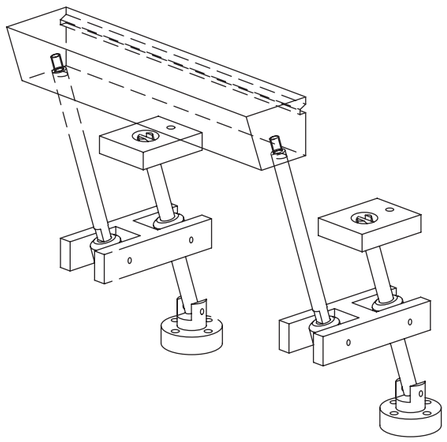


Example of multiple lifter cores being actuated in parallel by a Standard Slide Base (SB).

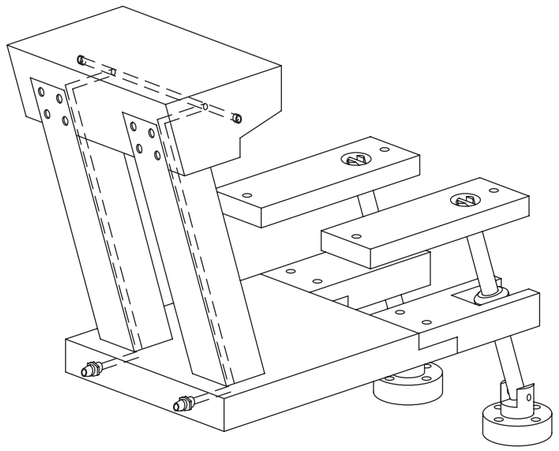


VectorForm Lifter System example with tandem ejector pins in close proximity to slide base. Joint Slide Base (JB) shown.

NOTE: Ejector pins are secured to, and move with, the ejector plate assembly, not the VectorForm System Slide Base.



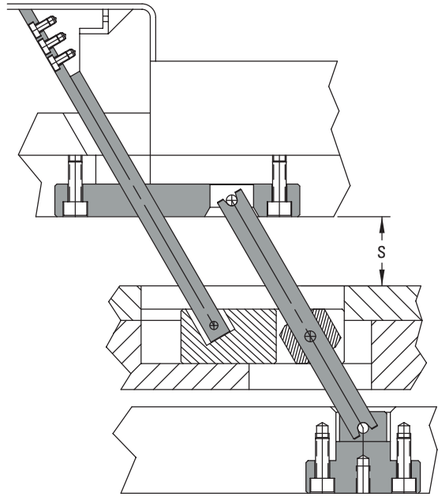
Example of two VectorForm Lifter System assemblies being used in parallel to lift a large lifter core assembly (UB shown).



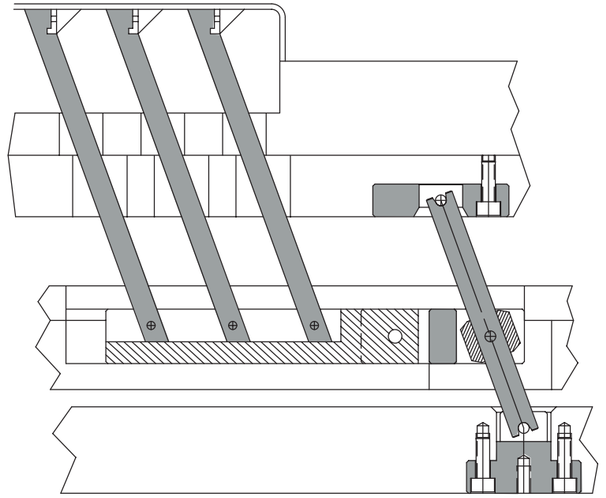
Multiple VectorForm Lifter Systems shown in parallel, actuating a large water-cooled lifter core through an extended Standard Slide Base.

VECTORFORM LIFTER SYSTEMS

Advanced Applications

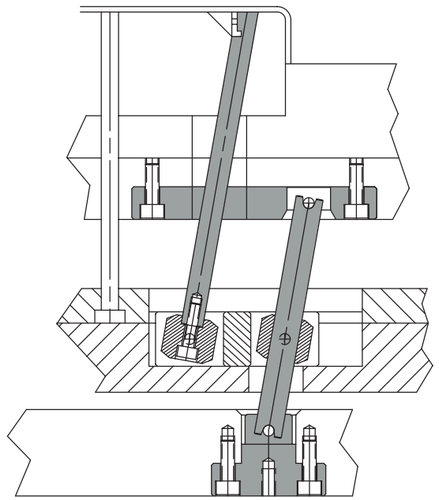


Deep undercut attained by increasing the shift angle and by having sufficient stroke "S". Standard Slide Base (SB) shown.

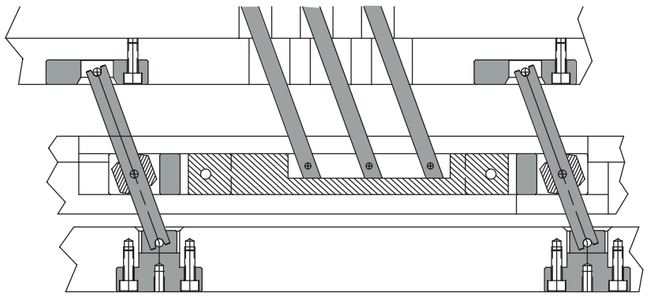


Multiple VectorForm Lifter Systems can be operated in tandem by a single Guide Rod assembly with the use of a simple extension coupled with a standard slide plate. Joint Slide Base (JB) shown.

This product is no longer available



Avoid interference with the adjacent components by using a small section lifter core and by using reverse installation. Universal Slide Base (UB) shown.



In cases of high ejection resistance, serial tandem guidance can be aided by using two or more Guide Rod assemblies. Joint Slide Base (JB) shown.

VectorForm Component Specifications

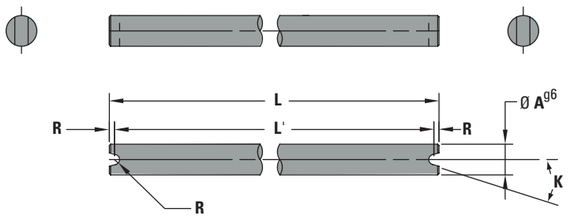
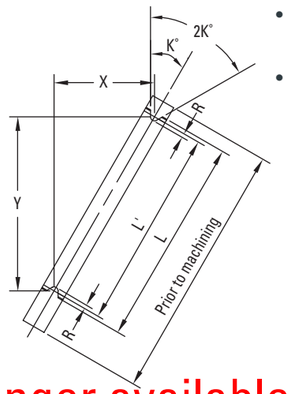
Guide Rod – GR

Material: S-UJ-2 / DIN 100Cr6 / AISI-52100
Hardness: 58-60 HRC
Heat Treatment: Induction hardening completed; heat treat is not required

Additional Machining:

- Center distance:
  L' = Y/coxK°
  L = L' + 2R
- All dimensions shown are to be held after any additional machining has been performed
- Non-designated tolerance: +/- 0.1
- Non-designated chamfer "C" tolerance: 0.5 ~ 1.0





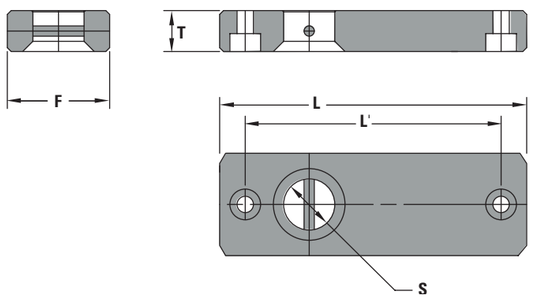
NOTE: Moldmaker to add grooves and chamfers per specifications shown.

Guide Plate – GP

Material: S-50-C / DIN C50 / AISI-1049
Hardness: 15-20 HRC
Heat Treatment: Gas nitriding is permissible after additional machining has been performed

Additional Machining:

- Lifter core hole or slot
- As required to accommodate the lifter core assembly



VECTORFORM LIFTER SYSTEMS

Dual-Rod Design Benefits

A New Approach to Designing Lifter Cores: Dual-Rod Design

Benefits of using a secondary guide rod on lifter core assemblies

Conventional lifter cores have been somewhat limited in their performance given the large mold foot-prints they create. Reactionary forces and bending moments within conventional lifter core rods require smaller rod angles, which can increase mold die height and footprint.

A new approach to designing lifter cores utilizes a second guide rod that is parallel to the lifter rod. This formation eliminates the bending moment seen in conventional single-rod lifter configurations, allowing for a greater lifter angle and reducing overall die height and mold footprint.

Single-Rod Lifter Systems

When designing mold cores for undercuts and side-action molding, the designer has several lifter system options. The first is using sliding cores and angle pins. This option requires consideration and can result in selecting a lifting core with a smaller platen size at the expense of a larger die height.

Conventional lifter cores also have limits on the angles allowed. If the molded undercut is large, the mold footprint may need to be increased to accommodate the required side travel of the lifter core, increasing the required die height even further.

The single-rod lifter system is designed with the core, sliding plate and gib plates within the ejector plate assembly. Close alignment of the core is accomplished through tight tolerance entrance and exit holes in the core plate. This results in additional cost and added processing problems. An overriding problem of the conventional configuration: bending moment acting on the lifter rod, which leads to increased friction, abrasion and side loads.

If the lifter rod is not sized properly, premature wear or even breakage can result. Therefore, designers often over-design the lifter rod to account for additional loading. This increases component costs and limits the number of applications for the lifter mechanism.

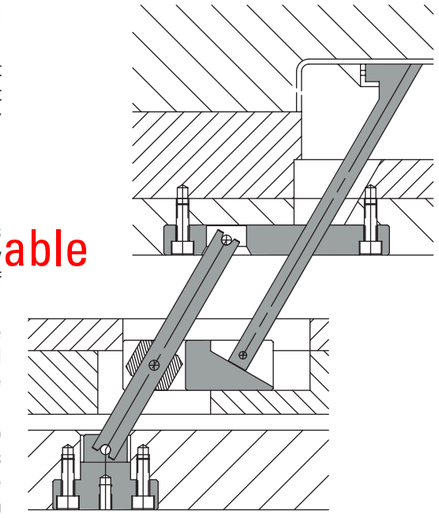

Fig. 1
Example of a preferred embodiment for designing a lifter core assembly. A second guide rod is used to create a parallelogram that significantly reduces moments acting on the lifter rod.

Dual-Rod Lifter Systems

Use of a second guide rod parallel to the lifter core is a relatively new and under-utilized method. The additional guide rod ensures proper alignment of the sliding base within the ejector plates. It also eliminates the bending stresses that occur as a result of the typical load distribution described within the conventional setup.

The new configuration creates a parallelogram within the ejector plate assembly between the primary lifter core, secondary alignment rod, alignment plate and sliding alignment base, as shown in **Fig. 1**. The structurally sound parallelogram eliminates the bending moment that occurs in single-rod systems.

Mold designers should note that the strength of the assembly will be that of the weakest link.

The use of a fixed secondary pin eliminates friction between the secondary pin and the upper alignment plate. The actuating load transferred to the primary lifter core is now centered on the axis of the lifter core and in the same direction as the motion of the core. The reduction in friction and bending moment permits a greater lifter angle, allowing the designer to reduce both the necessary die height and the mold footprint on the platen (see **Fig. 2**).

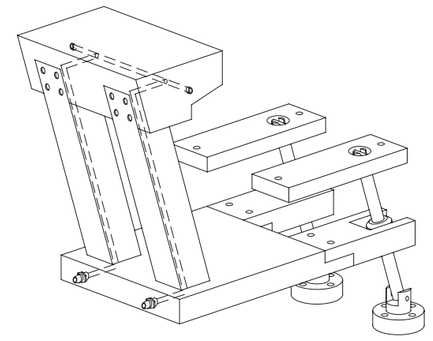

Fig. 2
Reduction in bending stress in lifter rod allows for larger angle, thereby reducing die height.

VECTORFORM LIFTER SYSTEMS

Dual Rod Design Benefits

This product is no longer available

How to Incorporate Dual-Rod Technology

As shown in **Fig. 1**, an ejector housing cross-section must be designed with the desired plate thickness and necessary ejector stroke. By increasing the lifter core angle, mold designers can achieve faster part ejection and a larger undercut feature. A guide plate is used to retain the second guide rod, as well as align the lifter core rod. Sufficient space around the lifter core rod is needed when placing and sizing the guide plate. Starting from the retaining feature for the guide rod in the guide plate (in this case, a dowel), a line parallel to the centerline of the lifter core rod should be drawn into place.

Ideally, standard components for these lifter systems will be developed ensuring all guide rods feature a round design, as opposed to one with a rectangular cross-section. A sliding assembly, such as a block base, may be used to reciprocate along the plane of the ejector plate assembly as the machine's ejector rod moves though the extent of the ejector stroke.

Both the primary lifter core rod and the second guide rod are aligned and retained by the sliding base within the ejector plate assembly. Since the second guide rod must not move, it is retained further down in the base of the ejector box assembly, as seen in **Fig. 1**. To retain the second guide rod, use a pivoting guide bushing, held in with a pin to the sliding plate. Since the loads acting on the pin are minimal, the pin can be small.

Next, the lifter core must be physically connected to the sliding plate. A mold designer has several options, each with different benefits. If the anticipated loads acting axially on the lifter core will be excessive (the weight of the lifter core itself may even qualify as excessive), then making a tapered surface cut into the sliding plate will enable sufficient backup and support behind the lifter core rod.

By increasing the lifter core angle, mold designers can achieve faster part ejection and a larger undercut feature.

If the expected axial load in the lifter core rod is moderate to low, then a pin or similar device is sufficient to retain the lifter core rod. Mold designers should note, however, that the strength of the assembly will be that of the weakest link; in this case, the joint pins retaining the lifter core rod. Make sure the joint pin and the overall lifter are sized accordingly.

In the final stages of lifter system design, the mold designer adds clearances for the slot used to retain the sliding plate, as well as clearances for the guide and lifter core rods. Use of a guide plate, slide plate and base-mounted retainer bushing eliminates the need of machining tightly toleranced, angled holes into the mold plates themselves.

By using a pivoting guide bushing with sufficient close-fit tolerance to the guide rod, in combination with a loose-fit installation on the base-mounted retainer bushing, the guide rod and sliding base assembly will effectively self-align. When the assembly technician is satisfied that the ejector plate assembly and lifter core system all move freely, the base-mounted retainer bushing can finally be bolted in place, providing the necessary guide rod retention for normal use.

Another benefit to the sliding base design is the rigid backup to the lifter core rod, which allows the use of lifter core cooling (provided the lifter core rod and overall assembly is large enough to accommodate the diametrical size of the intended waterlines, seals and fittings without affecting the lifter rod rigidity required to move the intended lifter core mass). Refer to **Fig. 3** for more detail regarding the addition of cooling to the lifter core assembly.

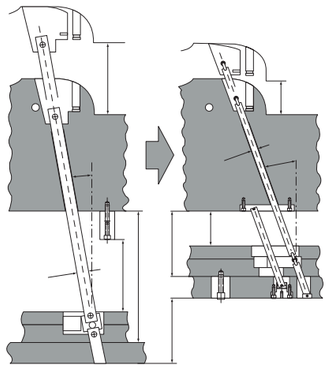

Fig. 3
Example of lifter core assemblies with internal cooling features. This example also shows how two slide base assemblies may be "ganged" together to actuate and support a single large lifter core.

The use of a guide rod to guide the slide base in the moving ejector plate assembly reduces stress on the lifter rod and allows for use of a smaller lifter core assembly. This also means that multiple lifter rods and the attached cores can be ganged together, and are actuated by either more or less slide base and guide rod assemblies, depending on the needs of the application. The level of flexibility and functionality offered by this approach can lead to increased competitive advantage for both the moldmaker and end user.

Many Advantages to Dual-Rod Design

Through incorporating a second guide rod in lifter core assemblies, mold designers can reduce reactionary forces in the mold and enable smaller assemblies. Without the conventional drawback of increased friction and loading due to bending moments, the dual-rod design allows deeper undercuts using steeper lifter core angles – leading to increased cost savings. The ease of design and assembly make it simple to add lifter cores to molding applications, as well as increase the molder's capabilities when a small mold footprint is critical.

HYDRAULIC UNSCREWING DEVICE

Calculations/Specifications

Thread Lead = 1/(Threads per inch) = 1/Pitch = Inches/Thread

Thread Length = Length of threads to be removed from the cap

A. Stroke (Inches)

NOTE: Limit switches should be used if possible to limit full cylinder travel. This will extend the seal life inside the hydraulic cylinder.

a) Required revolutions (thread core)

$$= \frac{\text{Thread Length}}{\text{Thread Lead}} + \text{Safety (.5 revolutions minimum)}$$

b) 1. Required stroke – Inches

= Gear Pitch Diameter x π x Required Revolutions

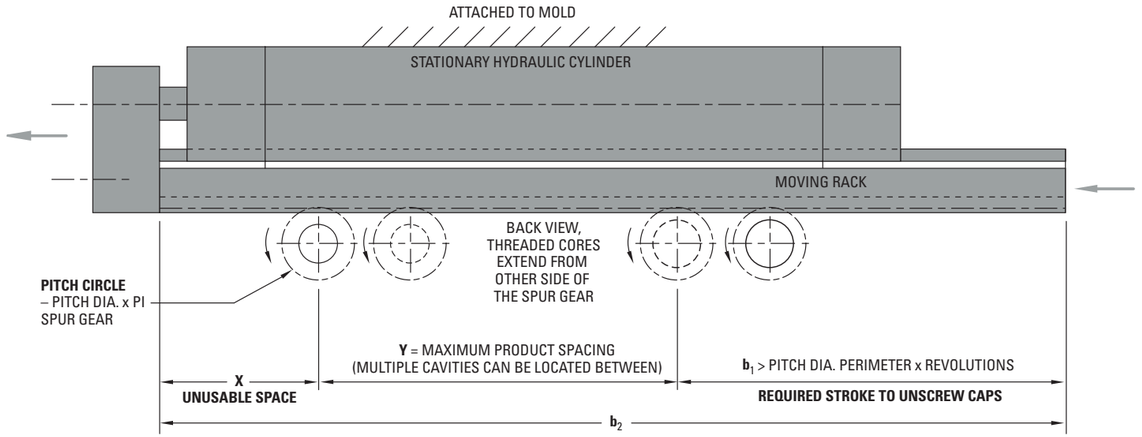
If required stroke is too long, a cogwheel transmission should be used.

2. Length of Rack

$b_2 = x + y + b_1$

c) Stripper stroke (Inches)

= Cylinder Stroke – Required Rack Stroke



DME

HYDRAULIC UNSCREWING DEVICE

Calculations/Specifications

B. Control Cam Calculation

d) Moving Cam (α)

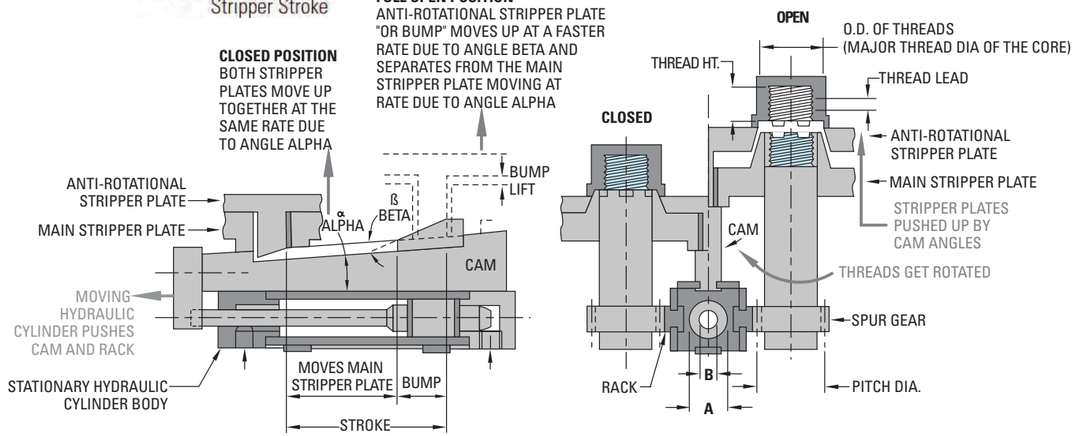
NOTE: Moves Main Stripper Plate in sync. with unscrewing thread.

$$\tan \alpha = \frac{\text{Thread Lead}}{\text{Gear Pitch Diameter x } \pi}$$

e) Stripper Cam (β)

NOTE: Moves Anti-Rotational Stripper Plate or provides "BUMP" to shake part off.

$$\tan \beta = \frac{\text{Stripper Height}}{\text{Stripper Stroke}}$$



C. Unscrewing Force

These figures should only be used as a guideline, as many other factors will affect the calculation (material, variation of dimensions, material shrinkage, core surface area, temperature, lubricants, friction, etc.).

f) Residual Pressure (PSI)

= 1/100 of maximum injection pressure

g) Effective core surface area (Square Inches or in^2, Outer Core Cylinder Shell)

Flat end of threaded core neglected, x 2 value for 45° triangle thread shape

= major thread dia. of the core x π x thread height x 2

h) Unscrewing torque ($in\text{-}lb_f$)

= Residual Pressure x Effective core surface area x major thread radius of core

i) Unscrewing force rack (lb_f)

$$= \frac{\text{Unscrewing Torque}}{\text{Gear pitch radius}} \text{ X number of cavities}$$

k) Hydraulic force (lb_f)

NOTE: x 1.5 is 50% Safety Factor, if x 1.0 there would be no safety factor.

= Unscrewing Force x 1.5

HYDRAULIC UNSCREWING DEVICE

Calculations/Specifications

ZB-xx-y	1	Flange-Version 2
ZZ-xx-yy	1	Cam Riser
ZF-yyyy	2	Guideways for Cam

NOTE:
Moldmaker should provide limit switches for fully closed and for cylinder extended. Full cylinder extension should be avoided to improve internal cylinder seal life.

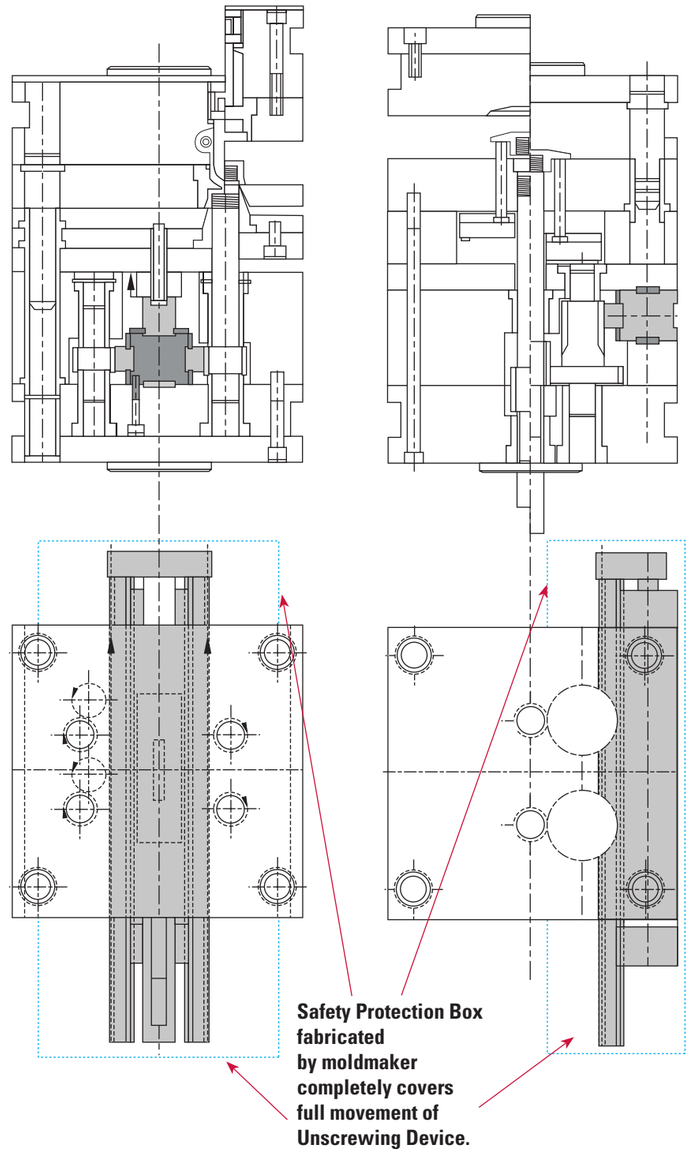
A complete Engineering Design Guide, plus separate example, are available at www.dme.net/hud

Application A

Without guiding thread with cam

Application B

With guiding thread

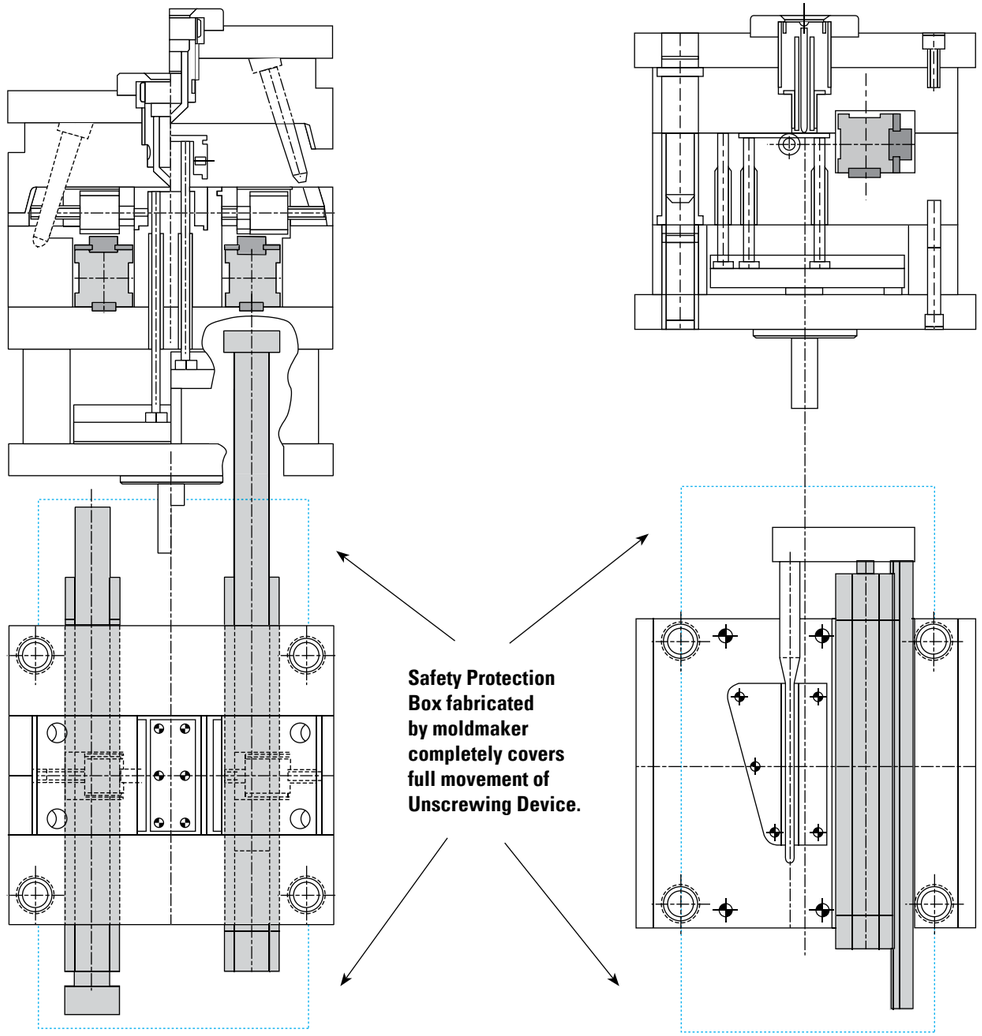


HYDRAULIC UNSCREWING DEVICE

Applications

Application C

With guiding thread



Application D

Long guiding cores

Safety Considerations: Moldmaker must fabricate boxes over the rack areas which move to protect against injury to personnel. Moldmaker must also use safety interlocks to prevent movement of unscrewing device if these protection boxes are removed for any reason. Also, sheet metal should be used to cover areas where the gears are, to prevent damage from loose debris falling between the gears and racks.

COLLAPSIBLE CORES

DURA Core Collapsible Cores

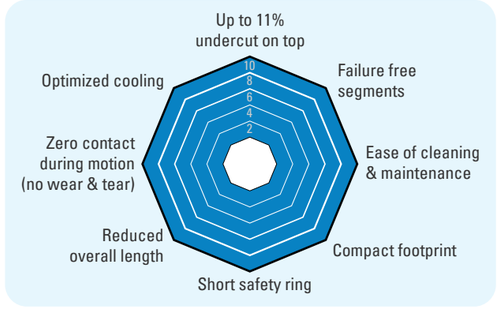
ADVANCED SOLUTION FOR MOLDING THREADS

Introducing DURA CORE, an innovative collapsible core solution: a ground breaking two-piece spring collapsible core designed for precision and longevity. This advanced collapsible core features a unique sequential collapse mechanism, where the larger and smaller segments operate independently. This distinct design ensures stress-free movement of the smaller segments, significantly enhancing the life-span of the DURA CORE. Our team of DME engineers will meticulously review each part model to tailor-design a DURA CORE that perfectly aligns with your unique application requirements. Utilizing our exclusive patented design, every DURA CORE purposefully eliminates interaction between the larger and smaller segments throughout the collapsing process. This ground breaking characteristic not only prolongs the core's durability but also promotes the production of premium quality parts.

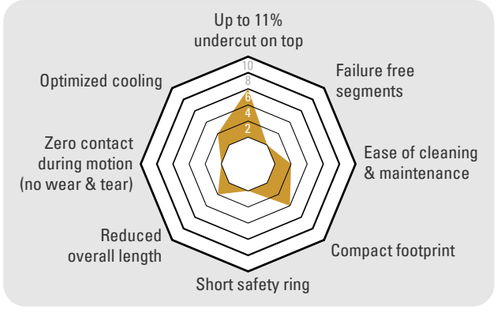
DURA CORES, with their compact design and shorter safety ring, enable effortless cleaning and maintenance. The innovative construction enhances cooling, reduces the overall length, and results in a more compact footprint. Ultimately, the DURA CORES lead to the creation of smaller, simplified molds and elevate part quality. The DURA CORE's two-piece design drastically reduces collapsible core maintenance, a common challenge with traditional spring collapsible cores.

SPRING COLLAPSE COMPARISON

DURA CORE



OTHER SPRING COLLAPSIBLE CORES



COLLAPSIBLE CORES

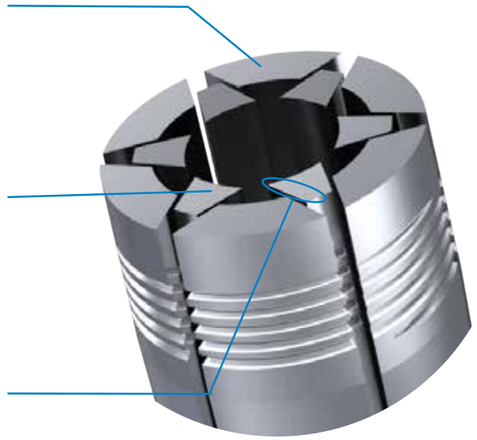
DURA Core Collapsible Cores

ADVANTAGE - ZERO CONTACT DURING SEGMENT MOVEMENT

LARGE SEGMENTS LEAD
During the mold closing phase, the center core first engages larger segments, designed to make contact before the smaller ones. This allows larger segments to smoothly lead the opening, ensuring efficient and contact-free movement.

SMALL SEGMENTS FOLLOW
Following the larger segments, the center core smoothly engages the smaller ones, ensuring their synchronized and coordinated efforts. This designpre-vents contact and additional load on the smaller segments during the mold closing phase.

ZERO CONTACT DURING MOTION
In the DURA CORE, the absence of physical contact between large and small segments markedly decreas-es wear and tear. This essential innovation is key to ensuring a longer operational life for the DURA CORE.



WITH PATENTED TWO-PIECE DESIGN

The two-piece design of the DURA CORE is an innovative feature that significantly enhances the usability and maintenance of the collapsible core in injection molding.

- **Effortless Disassembly:** Simplifies the process, enabling quick access to each component.
- **Easy Inspection and Cleaning:** Offers enhanced accessibility for thorough maintenance
- **Rapid, Secure Reassembly:** Ensures quick and correct reassembly after maintenance
- **Minimize Maintenance Downtime:** Reduces maintenance time, boosting production

ADDITIONAL DESIGN FEATURES

- **Short Safety Ring:** A compact safety ring, securely mounted on a safe plate
- **Straight Core Pin:** The straight core pin design is a key element in optimizing both manufactur-ing and cooling. By facilitating more efficient cooling, it leads to improved overall performance of the core, enhancing the quality of the molded parts.
- **Reduced Overall Length:** The DURA core's reduced length offers considerable space-saving advantages. This design aspect is particularly beneficial in minimizing the mold base stack height, leading to more compact and efficient mold designs.
- **Compact Footprint:** A space-efficient design allows for more cavities in the same-sized molds or the same number of cavities in a smaller mold, thereby maximizing production output per cycle.

COLLAPSIBLE CORES

DURA Core Collapsible Cores

LARGE SEGMENTS LEAD
(Outer part of DURA Core)
Material: **S136/420/Equivalent**
Hardness : **50-54HRC**

SMALL SEGMENTS
(Inner part of DURA Core)
Material: **S136/420/Equivalent**
Hardness : **50-54HRC**

STRAIGHT CORE PIN
(Mounted on a fixed plate)
Material: **D2**
Hardness : **58-60HRC**

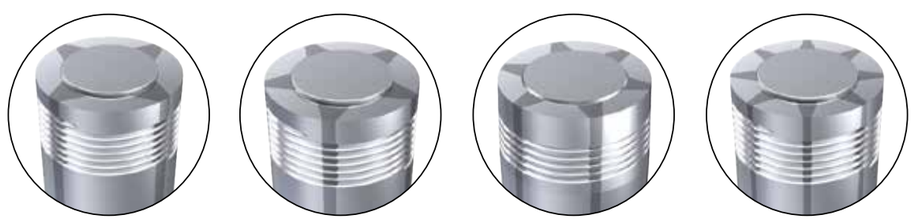
SAFETY RING
(Mounted on a safe plate)
Material: **D2**
Hardness : **58-60HRC**

Note: **Safety ring is not necessary if the collapsible core diameter is equal to or greater than 40mm.** Omitting the safety ring in these cases simplifies the mold design and the ejection process.

DURA CORES CAN BE ORDERED WITH OR WITHOUT DLC COATING AND CORE MATERIAL CAN BE CHANGED BASED ON THE APPLICATION.

MULTIPLE VERSIONS DEPENDING ON PART GEOMETRY

The DURACORE can be designed with diverse segment options, providing design flexibility to ensure sufficient collapse for undercuts. The number of segments required is determined by the part size, part shape and the undercut. We offer options of 8, 10, 12, and 16 segments to accommodate a broad spectrum of part sizes, with diameters ranging from 15mm to 150mm.



8 SEGMENTS | 10 SEGMENTS | 12 SEGMENTS | 16 SEGMENTS

COLLAPSIBLE CORES

S-ore Collapsible Cores

DME S-CORE TYPES

AN ADVANCED SOLUTION TO MOLDING THREADS AND UNDERCUTS

More options more capabilities. The New DME S-Core is a dynamic design that can be produced in 6, 8 or 12 segments enabling parts to be produced as small as 6mm and as large as 400mm. The length and depth of the part feature dictates the number of segments required to release the undercut.

DME Engineers will review each part model and design a DME S-Core for your specific application. Each DME S-Core utilizes **patented safety stops** preventing the folding segments from touching each other during ejection or over travel. This results in a longer lasting collapsible core that produces higher quality parts.

The DME S-Core Dovetail Cores allow for: simplified smaller molds, faster cycle times, improved part quality and reduced mold maintenance over traditional devices. It also helps reduced mold maintenance over traditional unscrewing devices. Making it a better choice for your threading or undercut application.

THE DME S-CORES CAN BE MANUFACTURED IN DIFFERENT VERSIONS.

The DME S-Cores can be manufactured in multiple versions depending on part geometry.

6 Segments

Three (3) large and three (3) small slide segments each. Provides sufficient collapse for undercuts up to 600mm.

Ready to Mold Collapsed for Ejection

8 Segments

Four (4) large and four (4) small slide segments each. Used for intermediate (medium) undercuts.

DME S-Core's can be designed in Oval and Square shapes to compensate for part deformation/shrink.

Ready to Mold Collapsed for Ejection

12 Segments

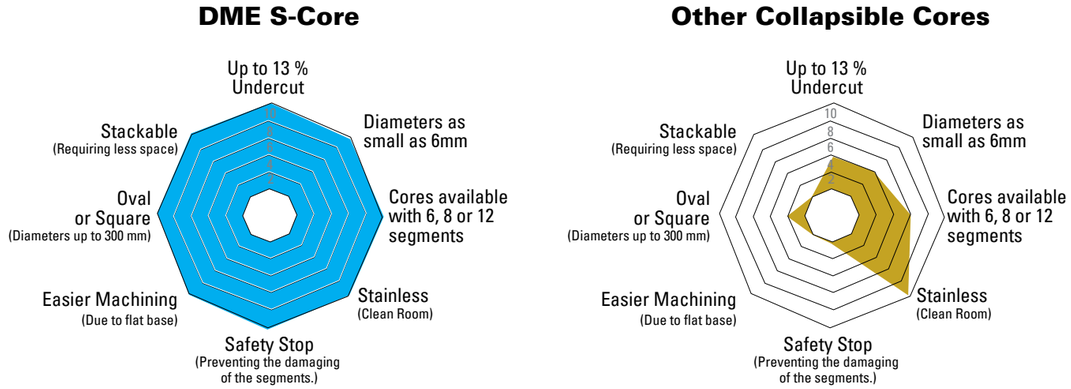
The smallest possible collapsible core available. Design optimized for producing undercuts on diameters as small as 6mm.

Ready to Mold Collapsed for Ejection

COLLAPSIBLE CORES

S-Core Collapsible Cores

COLLAPSIBLE CORE COMPARISON



DME S-CORE
WITH PATENTED SAFETY STOP

DME S-Core Safety Stop protects the folding segments from colliding when fully opened or over traveled.

- Unlike other products on the market, the DME S-Core has safety stops built into the corners of the folding segments to prevent them from colliding with one another in the event of over travel.
- The safety stop is incorporated in all of the folding core segments in the head area (between the three retaining rings).
- Folding segments are made from 420 stainless steel and the center guide is made from H13.
- **Safety stops come standard on all DME S-Cores.**

COLLAPSIBLE CORES

S-Core Collapsible Cores

RETAINING RINGS

Want to produce more parts in a smaller space? The DME S-Core Rack System allows for cores to be placed closer together by utilizing a common retaining ring. This is an important feature when space in the mold is limited. This allows designers to create smaller molds to run on smaller presses - saving time and money. Rack systems can be made with up to 8 cores and a minimum spacing of 30mm, however this is dependent on the size of the product being produced and the required under cut depth.

ADDING DETAIL MADE EASY

DME can provide the DME S-Core ready to install with the complete thread or undercut detail already machined in, however in some cases customers like to complete this detailed work. The new DME S-Core is designed with a flat bottom (shown below). When the core is positioned flat it is at location "zero" or "molding position" allowing for ease of setup to perform final machining or EDM.

NOTE: Manufacturing fixture available upon request at no additional cost when purchasing all DME S-CORES.

COLLAPSIBLE CORES

EX_CAV Standard Expandable Cavities

The Expandable Cavity (EX-CAV®) simplifies design and cuts costs to reliably mold and release external profiles on circular plastic parts. The product is ideal for parts such as bottle caps, threads, snap rings, barbs, convex grooves, protrusions, logo details, etc.

Expandable Cavities eliminate the need for traditional slide action assemblies, thereby allowing higher cavitation within the same mold footprint to increase productivity. Depending on the part configuration, the Expandable Cavity's striker insert can be used in the "A" or "B" side of the mold.

- Expandable Cavities with an "A" side striker insert mold the complete part, enabling details such as an outer thread or a snap ring to be released from the mold.
- Expandable Cavities with a "B" side striker insert are for part configurations where undercuts such as barbs and protrusions are located under the part surface.

Cost Savings that Maximize Value

- Simplified mold design
  - Eliminates traditional slides; allows molding of details once considered "un-moldable"
  - Uses existing ejector system for actuation; either mold open or ejection stages the Expandable Cavity forward to release the molded undercut
- Reduces maintenance costs
- Maximizes cavities per mold
  - Compact; often enabling more cavities in the mold and/or the use of a smaller mold base
- Improved mold balance and flexibility in design
- Easily accommodates family molds
- Detail is machined in a one-piece unit eliminating the risk of error or mismatch that can occur with mating slides
- Manufactured with certified alloy steel (A-2) and proprietary processing techniques to ensure long life and dependable performance

Frequently Asked Questions

Q. What are the material types from which an Expandable Cavity can be made, and how much hardness and wear resistance is expected?

A. A-2 tool steel is the default material. It has a hardness of 54-57 HRC. Wear resistance is very good.

Q. Are surface treatments recommended?

A. It depends on the application. The DME engineering staff will review potential options, if needed.

Q. Are there any temperature limitations?

A. Maximum temperature is 260°C/500°F.

Q. What is the expected life cycle of an Expandable Cavity and what maintenance is required?

A. Customers have run millions of cycles. The biggest factor for performance is not the flexing aspect or fatigue as much as cleanliness of the tool over the life of the mold.

STANDARD EXPANDABLE CAVITY SYSTEMS

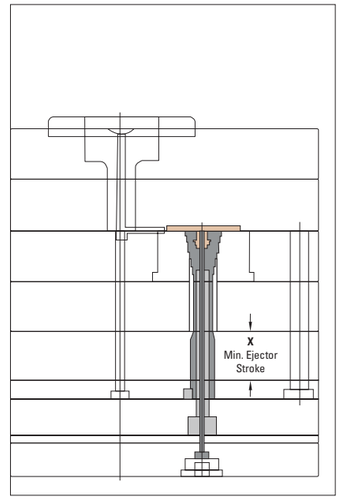
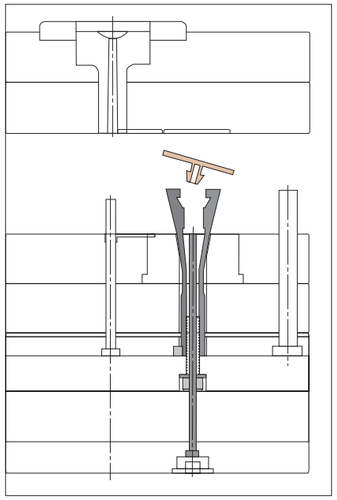
Technical Information

Expandable Cavities simplify tooling design to effectively mold undercuts such as threads, dimples, and protrusions on parts such as snap O-ring caps, plumbing supplies, industrial flanges and valves, electrical fixtures, and much more. The patented Expandable Cavity design eliminates the engineering, maintenance, and machining required for slide action mechanisms which results in smaller molds or higher mold cavitation.



Mold Closed



Mold Open

Technical Information:

- Available in four standard sizes to satisfy a wide range of applications.
- The Expandable Cavity expands along a conical shape; 10° per side.
- Manufactured from A-2 tool steel (54-57 HRC) for repeatable expansion. For optimal performance, the Expandable Cavity should ride against a hardened insert.
- Expandable Cavities are capable of operating without lubrication. However, treating the Expandable Cavity with an additional coating for wear reduction or corrosion resistance is beneficial.
- Expandable Cavities can be ordered with molding detail for a 'mold ready' component.

Expandable Cavity System – Features and Benefits

Lowers development and processing costs

The Expandable Cavity saves money at every step – from initial tooling to processing to maintenance. Intelligent engineering reduces or eliminates many costly factors such as complex design details, core slides and required mechanical components, added maintenance and replacement of high-wear items often found in traditional slide action molds.

The Expandable Cavity is maintained under compression during molding.

As the mold opens, segments are released automatically to the expanded position, and the part is released.

U.S. Patent Numbers
5,387,389 D 356,320

Broad range of benefits

Simple design

The revolutionary design and engineering of the Expandable Cavity saves steps and solves problems that have complicated plastics molding for years. In addition to simplifying new tooling design, it can be retrofit to existing molds.

More reliable

Complete reliability of the Expandable Cavity is assured, not only by the simplicity of the design, but also by the use of superior materials and proven proprietary processing techniques. You can count on minimal downtime and higher productivity. The Expandable Cavity has been field tested over several million cycles.

More compact

Using the DME Expandable Cavity allows you to design more cavities in each mold.

Speeds molding process

The Expandable Cavity concept eliminates the need for slide-action mechanisms and the additional machining steps they require. Various part ejection methods can be employed.

Speeds development

The Expandable Cavity concept simplifies the engineering required to design and manufacture a new cavity. This means that your new products go into production in less time than was previously possible.

CUSTOM EXPANDABLE CAVITY SYSTEMS

Components

Typical Expandable Cavity for "A" Side Striker Insert

Typical Expandable Cavity for "B" Side Striker Insert

General maintenance

After 100-200 initial shots, the Expandable Cavity should be rechecked to ensure proper mechanical function.

A routine maintenance program of your Expandable Cavity System is recommended after 50,000 to 100,000 cycles. Thoroughly degrease and demagnetize system components. Observe for signs of abnormal wear. A light lubricant such as a P.T.F.E. should then be applied to the Striker Insert, Center Pin and the Expandable Cavity. This will increase the life of the system components. Never use a heavy grease. Re-install Expandable Cavity System.

If this maintenance procedure is performed as described above, several million cycles are easily obtainable.

Expandable Cavity

The Expandable Cavity is typically made of A-2 tool steel, hardened to 54-58 Rockwell "C". The typical tool has four segments which expand radially away, under their own spring force, from the center axis of the tool. In the closed molding position, the precision fit between each segment permits flash-free molding.

Striker insert

The striker insert is made from different types of tool steel. It is typically hardened to 32-45 Rockwell "C" scale, depending on the application. The striker insert has a lower hardness than the Expandable Cavity to ensure the eventual wear will occur on the striker insert and not the detailed Expandable Cavity. Depending on the part configuration, the striker insert can be used in the "A" or "B" side of the mold (see Figs. 1 and 2 for details).

The striker insert must be closely fit to the Expandable Cavity to ensure that in the **mold closed** position the segments are completely sealed against one another. The tolerance on this fit must be held to ±0.0005 inch to ensure flash-free molding.

Interchangeable center pin

The solid center mandrel is the most common type of center pin. It may have an inner cooling channel depending on its size. The center pin provides an internal shut-off with the Expandable Cavity.

Ejector sleeve

An ejector sleeve is commonly used to ensure part ejection from the cavity. The sleeve rides forward over the center pin, once the mold is opened and the cavity expanded. Many times the expansion needed is dependent on leaving clearance for the ejector sleeve.

Expansion limiter sleeve

If part design is such that it could tend to stick in the "A" side of the mold when the Expandable Cavity opens, an expansion limiter sleeve can be used. This sleeve will restrict expansion and retain the part until activation of a stripper plate allows additional expansion prior to part ejection (see **Fig. 3**).

CUSTOM EXPANDABLE CAVITY SYSTEMS

Typical Applications

CUSTOM EXPANDABLE CAVITY SYSTEMS

Expandable Cavity and Striker Insert Design

The Expandable Cavity can mold a full 360 degrees around. The most common configuration is four (4) segments that mold 90 degrees each. The Expandable Cavity can also be designed as asymmetrical, such as two segments that mold 90 degrees each and three segments that mold 60 degrees each. (Contact DME Applications Engineering for details.) The amount of expansion varies according to the part requirements and clearances needed.

The general calculations for total expansion necessary are:

1. Calculate the critical expansion per side

The critical expansion (CE) needed to release the undercut is not the radial difference between major diameter (D) and minor diameter (d). For a typical four segment Expandable Cavity, the formula for calculating critical expansion is (see **Fig. 4**):

$$CE = \frac{\sqrt{D^2 - (d^2/2)}}{2} - \frac{\sqrt{2} \times d}{4}$$

2. Calculate the loss of expansion

Loss of expansion = molding length x .050in

The loss of expansion is the amount of expansion the tool loses as you move back from the cavity's face. This is due to the fact that the segments expand radially outward from fixed points on the common base. The outward bend of a typical segment is about 2 to 3 degrees. The tool typically loses 0.050 inch per inch as you move into the Expandable Cavity from the tool's face (see **Fig. 5**).

3. Calculate the total expansion

Total expansion = critical expansion per side
+ loss of expansion + 0.005 clearance

When the mold is closed, the exterior of the Expandable Cavity must be supported by the Striker Insert at least 7/8 of the molding length plus the shut-off, to ensure no flash conditions. Allow for 0.200 inch of shut-off length below the molding length – any more is excessive (see **Fig. 6**).

CUSTOM EXPANDABLE CAVITY SYSTEMS

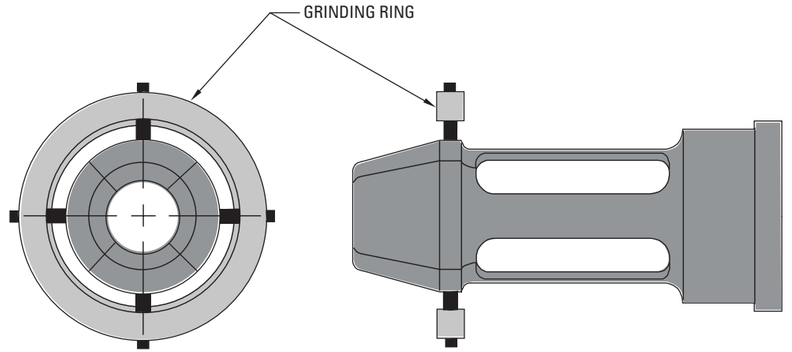
Application Guidelines



The possibilities are almost limitless

- Size Range: The Expandable Cavity is typically designed for parts with outside dimensions of 1/32 to 3 inches, but more custom designs are also available to suit your overall part size or undercut requirements
- Can be designed for retrofit to existing molds
- Can be designed for use in combination with DME Collapsible Cores, Collapsible Mini-Cores, unscrewing cores or straight pull outs for interior of part
- Can be designed in inch or metric sizes

The Expandable Cavity System may be subject to restrictions in its use for the molding of plastic tamper-indication closures in threaded caps under U.S. Patent No. 5,281,385 of Sunbeam Plastics Corporation. Roehr Tool disclaims any damages or responsibility for the use of its core when used in the method of such patent.

Detailing

Most Expandable Cavity details are usually ground or EDM'd. It is important when grinding to flood tool with suitable coolant for hardened tool steels. Do not grind with a loaded wheel (dress wheel frequently). The wheel must be of a soft grade (60J, 46J, etc.). When grinding make sure the Expandable Cavity is completely closed in a true circle by using the grinding ring supplied, as shown here.

After all finish grinding, polishing and EDM'ing work, be sure to demagnetize the Expandable Cavity to prevent adhesion of any metal particles that might find their way into the cavity during molding.

NOTE: DME does not provide the part configuration detailing or machining. We can direct you to an appropriate source for this service if required.

How to order

The Expandable Cavity is designed and constructed based on part configuration and mold design requirements. For a quotation, copy and fill out the Quote Request Form on the next page and mail, fax or email to the address or fax number shown on the form. If you also include a part print and/or mold design, DME can assist you in determining the feasibility of molding with the Expandable Cavity and review your overall mold design.

☒ Retrofit ☒ New Mold

EXPANDABLE CAVITY SYSTEMS

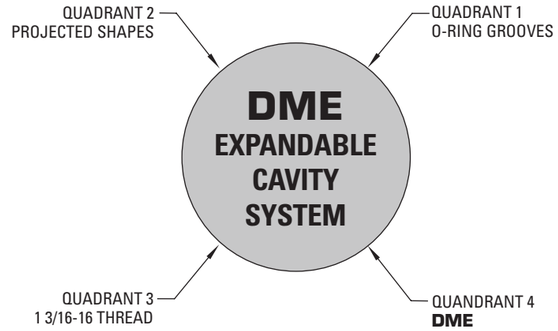
Plastic Part Design

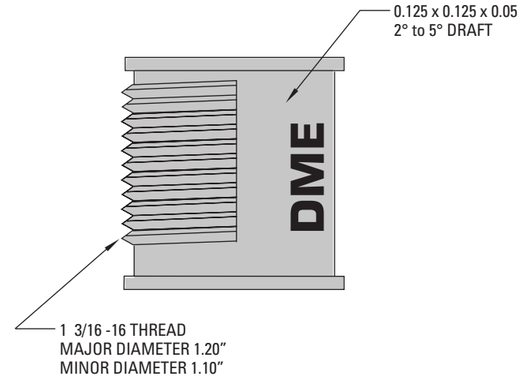
The Expandable Cavity was designed to produce external details. All commonly used thermoplastic molding polymers, including filled materials and engineering polymers, have been successfully molded with the Expandable Cavity. When using a corrosive polymer such as PVC, the Expandable Cavity must be surface treated with a protective coating. To prevent loss of expansion properties in the Expandable Cavity, the surface treatment process should not exceed a temperature of 600° F.

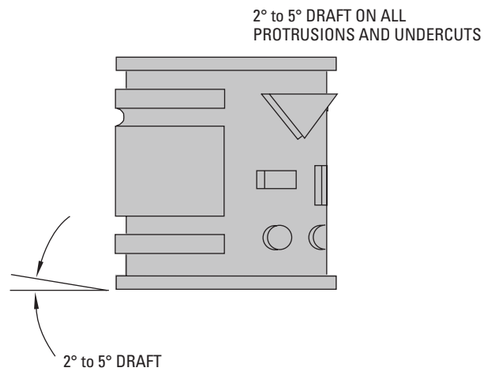
Good plastic design practice should be observed to avoid such conditions as distortion, sink marks, etc. These problems and their solutions are identical to those found in conventional moldings.

All undercuts, protrusions, windows, etc. will typically include two to five degrees of draft. The bottom edge of the part must also have approximately two to five degrees of draft. Also, if molding is required on the top of the Expandable Cavity, two to five degrees of draft needs to be included. This is necessary because the segments flex radially away from the molding position in an arc. The draft allows the segments to expand freely.

NOTE: The amount of draft varies with tool design. Changes in tool design (length, body diameter, etc.) can minimize draft requirements.







NOTE: Demo part has four (4) different quadrants of detail (call DME for a sample).

DME HELICAL GEAR STACK MOLD SYSTEMS

COST-EFFECTIVE SOLUTION FOR INCREASING CAPACITY

HELICAL GEAR STACK MOLD SYSTEMS

Comprehensive Options

DME delivers critical expertise with mold technology, while Milacron offers high-performance injection molding machinery when the application demands it.

The combination is unbeatable.

With DME Stack Mold Systems – the choice is yours. Our systems feature complete flexibility – built around a family of product standards that simplify implementation. Only DME gives you this wide range of choices. And, because they're from DME, you can expect reliability, advanced engineering, and outstanding performance.

Turnkey Systems Deliver a Total Solution

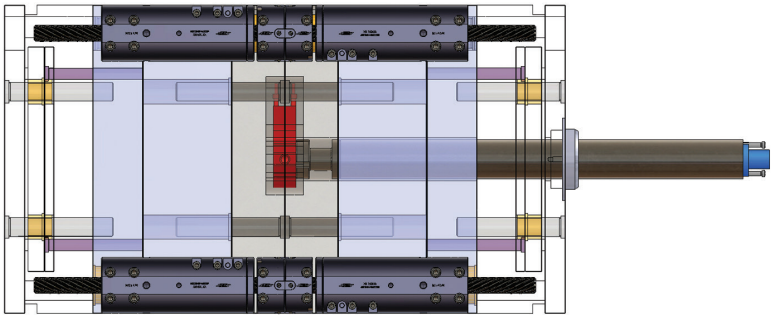
When you choose DME as your partner for Stack Mold Systems, you're choosing a total solution. How big that solution is, will be your choice. We can deliver a turnkey molding system (excluding the cores and cavities) including a molding machine.

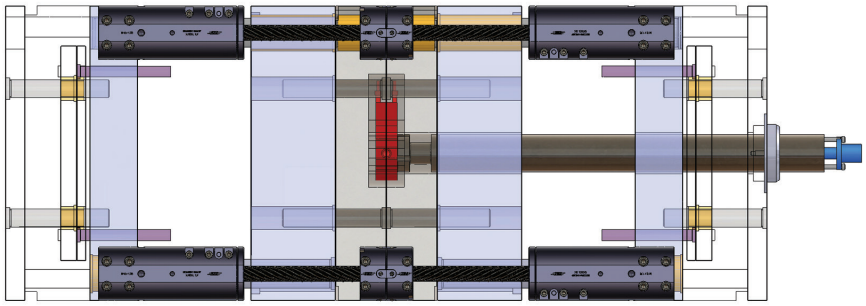
Our turnkey systems may include:

- Mold bases
- Hot runner systems and controllers
- Components – including centering and actuation devices
- System assembly
- Injection molding machines

HELICAL GEAR STACK MOLD SYSTEMS

Stack Mold Components





Mold is shown with Helical Gear centering device in closed and open positions.

Stack Molds

Today's plastics processor has to do more with less – less labor, less capital investment, less floor space, and less time. DME can help with comprehensive options for high productivity. Stack Mold Systems can double the output of standard, single face molds between the same tie bar distance. Because the cavity forces cancel each other out, the necessary clamping forces for stack molds are essentially the same as for single face molds.

Key benefits of Stack Mold Systems include:

- Cost-effective solution for increasing capacity
- Optimum use of shop floor space and machine capacity
- Expanded molding capacity without capital expenditures
- More output per unit of shop floor labor – higher productivity in your operation

Stack Mold Systems are ideally suited for automotive applications, housewares, packaging, caps and closures, cutlery and electronic industries. Any applications that require mating parts (container and lid, top and bottom, or left and right) or strict color matching are also candidates for increased molded part quality and molding productivity through stack molds.

Engineering Expertise Ensures Success

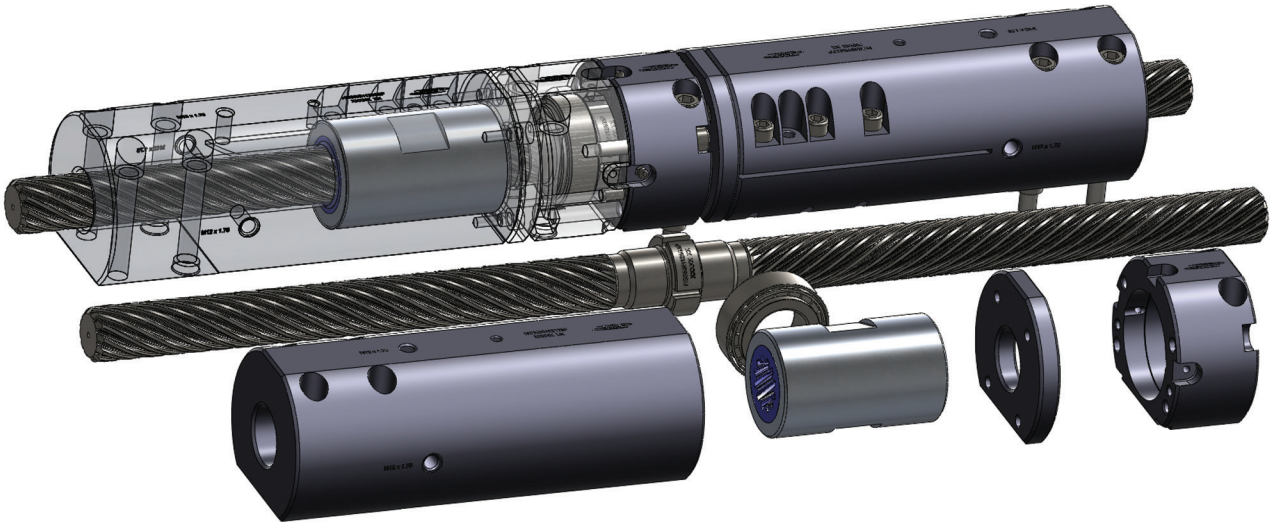
The DME design and engineering team delivers over six decades of experience with injection molding, and injection mold design. Our engineering services can quickly scale to meet the specific needs of your program. Our designers can assist in the choice and application of our rigorously engineered and proven Stack Mold Systems and Components. We can offer the entire stack mold design, configuration, and assembly – including the mold base, centering and actuating components, hot runner system, and temperature controller.

All DME Stack Mold components have been designed for optimal utility and reliability. Because DME delivers industry-leading expertise with Stack Mold Systems, we're able to provide a world class, integrated solution with all systems and components operating at optimum efficiency.

HELICAL GEAR STACK MOLD SYSTEMS

Stack Mold Components

HELICAL GEAR



Standard Stack Mold Systems

DME offers a centering actuation system, Helical Gear, to suit your specific requirements. A choice of center support configurations is available – including support on the tie bars (top, bottom, or both), on the machine ways, or on both the ways and tie bars.

Standard Stack Mold Components

DME also supplies a full line of standard Stack Mold Components. These standard components are available off-the-shelf and can be ordered for immediate shipment to meet your needs. Experienced mold designers can customize any Stack Mold System to meet their needs by using our easy-to-follow standards.

Pre-Engineered Subassemblies

Centering Devices – to synchronize two or more parting line openings.

- Helical Gear

Center Supports – to support the center portion of the stack mold while the mold is open.

- Low-cost bronze shoes
- Frictionless Smart Line Center Support System

Hot Runner Systems – to deliver the plastics from the machine barrel to the cavities.

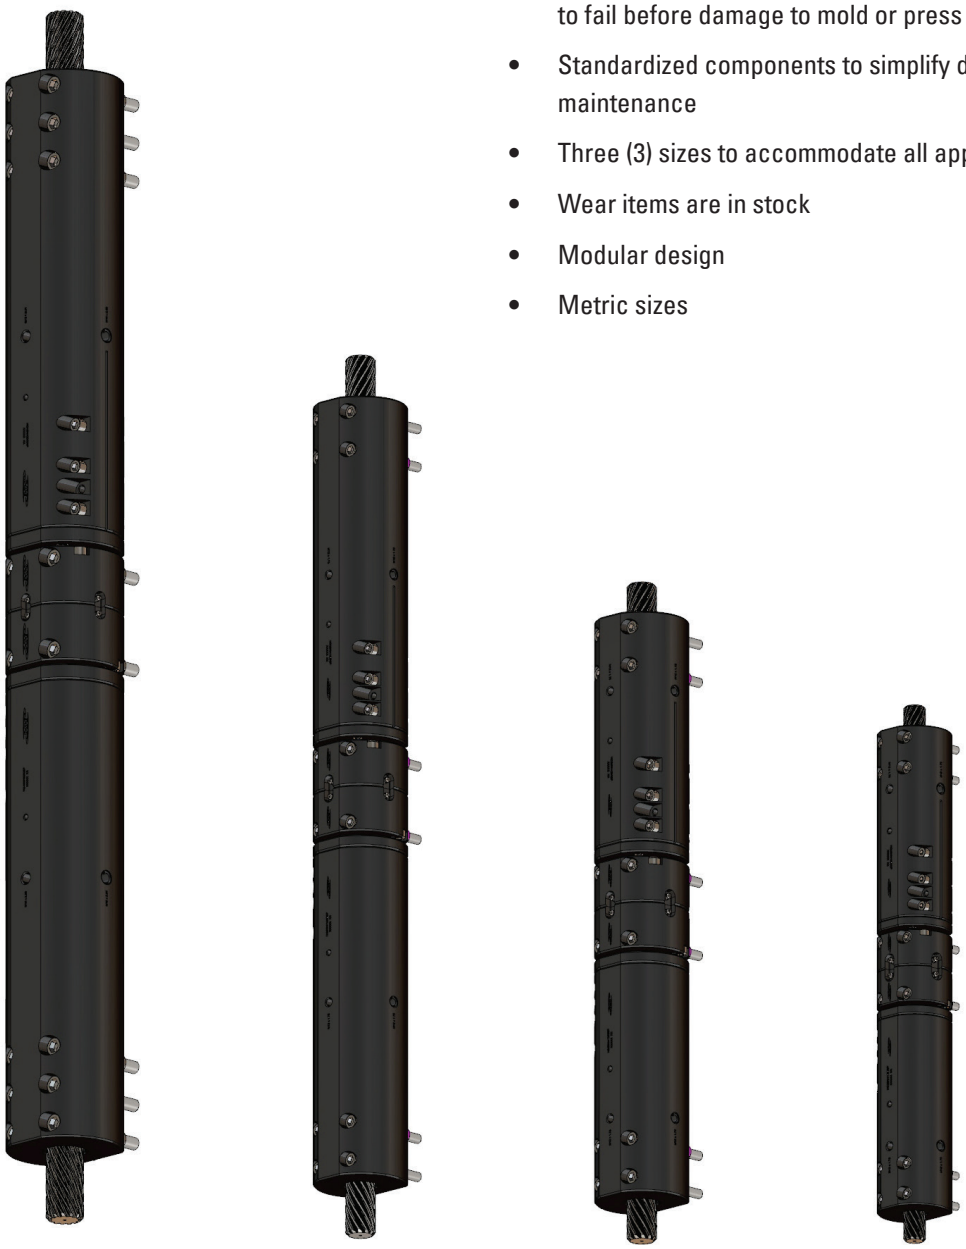
- Sprue bars
- Stack manifold
- Nozzles

HELICAL GEAR STACK MOLD SYSTEMS

Helical Gear Systems

Helical Gear Centering Device Advantages

- Easily adjustable to compensate for machining inaccuracies or stack height adjustments
- Small footprint to accommodate side entry robots and/or secondary injection units
- Light-weight assemblies with aluminum housings for easy assembly and maintenance
- Built-in mold seizing safety mechanism: Nylon thread designed to fail before damage to mold or press
- Standardized components to simplify design, build, and maintenance
- Three (3) sizes to accommodate all applications
- Wear items are in stock
- Modular design
- Metric sizes



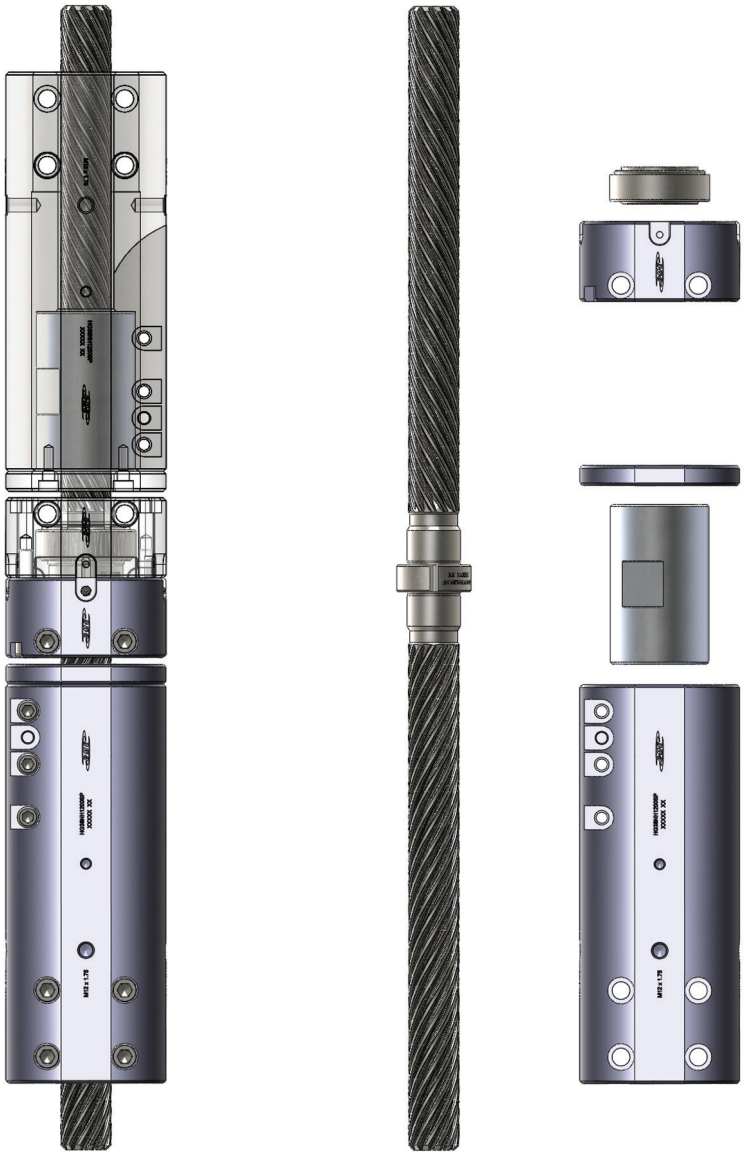
HELICAL GEAR STACK MOLD SYSTEMS

Helical Gear Components

DME Helical Gear housings and assemblies greatly simplify the design and development of stack molds – leaving you more time to concentrate on core and cavity details.

HELICAL GEAR CENTERING DEVICE – complete assembly

HELICAL GEAR SHAFT – available in (3) sizes



ROLLER BEARING

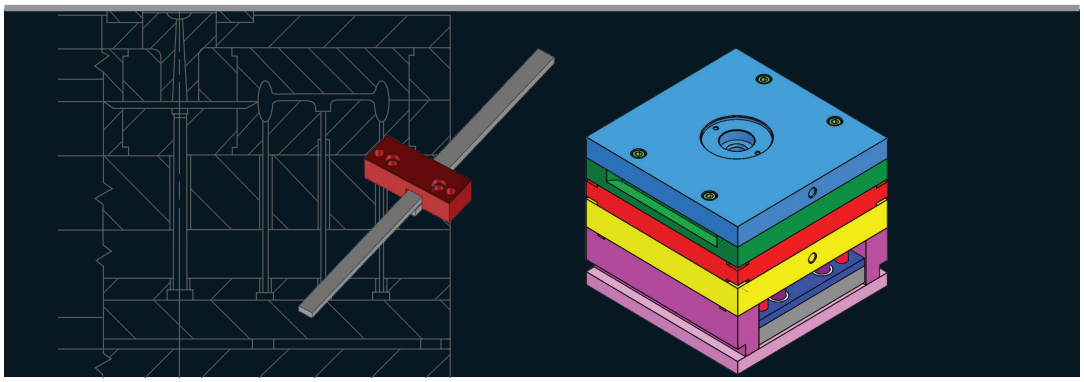
The DME CAD Imbedded Parts Library

DME has over 65,000 CAD files available for everything from mold bases and MUD inserts to hot runner components, temperature control connectors as well as thousands of mechanical components. **With 150 native and neutral file types available, this means you have access to 9 million different file options.**



The DME CAD Imbedded Parts Library is accessible throughout www.dme.net. This new imbedded library does not require any login or password. When you locate a product or item within our online website, direct links to CAD data are now incorporated into the page. However, for those who are familiar with our prior PARTcommunity or PARTserver libraries, they are still available for your use. All of these CAD libraries are based on a single library foundation which is managed by DME with the assistance of PARTsolutions.

You can also access the complete CAD library at: https://www.dme.net/cad-data/

DME 2-STAGE EJECTORS

POSITIVE, PRECISION CONTROL
OF TWO-STAGE EJECTION

Table of Contents

2-STAGE EJECTORS

Benefits

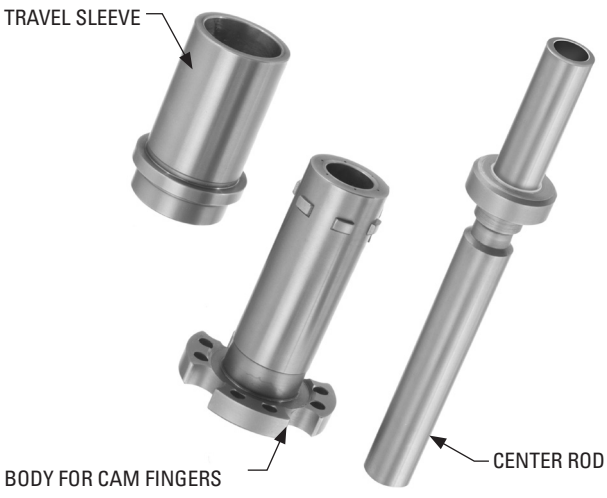
Positive, Precise Plate Control

DME 2-Stage Ejectors (TS) adapt to a number of mold base sizes and plate thicknesses. They are available in two ejection sequences: Top Last (TL) and Bottom Last (BL). Each ejection sequence is available in three sizes to accommodate most standard DME mold bases. The stroke range for each ejection stage is determined and fixed by the customer by cutting the Center Rod to the desired length (both TL and BL types) and by also cutting the Travel Sleeve to the desired length (BL type only). Once installed, the DME 2-Stage Ejector ensures positive, precise control of the sequence and distance of each stroke of the two ejector plates. Once installed, there are no adjustments that can be accidentally changed.

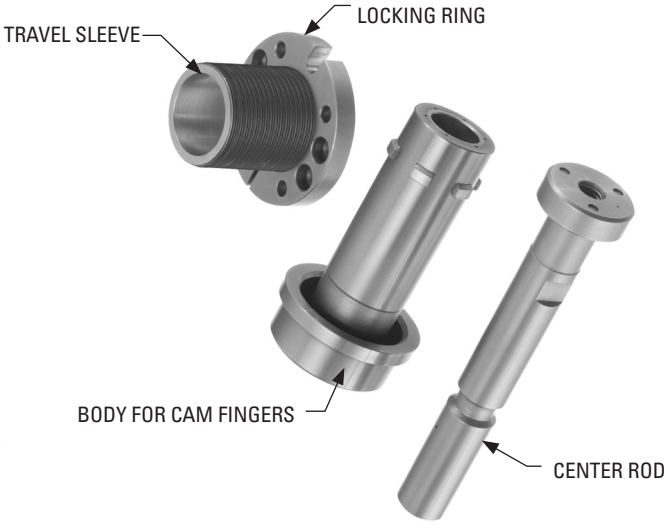
Benefits

- Both the first stage and second stage strokes are set independently
- Easy set-up and installation
- Fixed strokes cannot be tampered with or accidentally modified
- Internal installation – avoids interferences with water line connectors and externally mounted components
- Utilizes latching mechanism similar to DME Internal Latch Lock for smooth operation and guidance
- Three sizes to choose from for each style, to accommodate most standard DME mold bases
- Hardened steel components for long life

Top Last Subcomponents



Bottom Last Subcompo-



NOTE: Puller Pins are not shown. Puller Pins must be purchased separately.

2-STAGE EJECTORS

Size and Quantity Selection Guidelines

- Select 20mm diameter (small), 26mm diameter (medium), or 32mm diameter (large) 2-Stage Ejector based on the width of the mold base (large molds, thick plates or heavy load applications may require the next size assembly).
- Determine the travel range for each ejection stroke (first and second), being careful not to exceed the maximum stroke specified for the chosen 2-Stage Ejector style and size. This selection is based on the specific application.
- In general, a minimum of two 2-Stage Ejectors are required. For larger molds, thick plates, or an application where loads are near maximum, additional assemblies and/or larger assemblies may be required. An application must never exceed the maximum recommended load values.
- A balanced load must be maintained to avoid cocking and binding which could cause severe overloading. Only one size of 2-Stage Ejectors should be used in each mold base.

2-STAGE EJECTOR ASSEMBLY ITEM NUMBER	BASIC CENTER ROD DIA	STROKE 1		STROKE 2		RECOMMENDED MAXIMUM MOLD BASE WIDTH	MAXIMUM RECOMMENDED LOAD VALUES (PER ASS'Y)

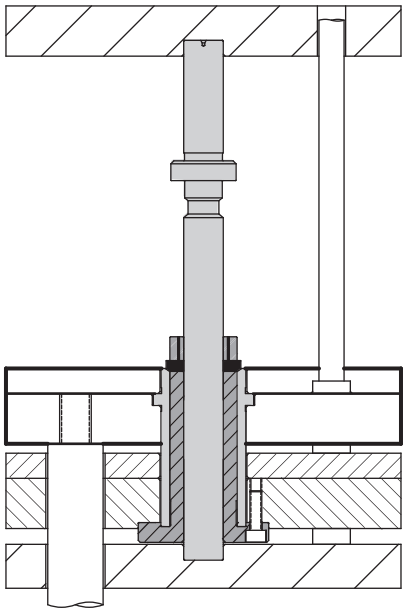
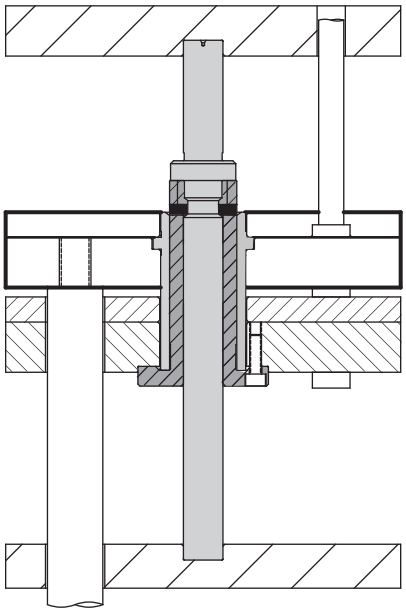
2-STAGE EJECTORS

Top Last Sequencing

Patent No. 6.575.730
Patent No. 6.106.271
(Additional patents pending)

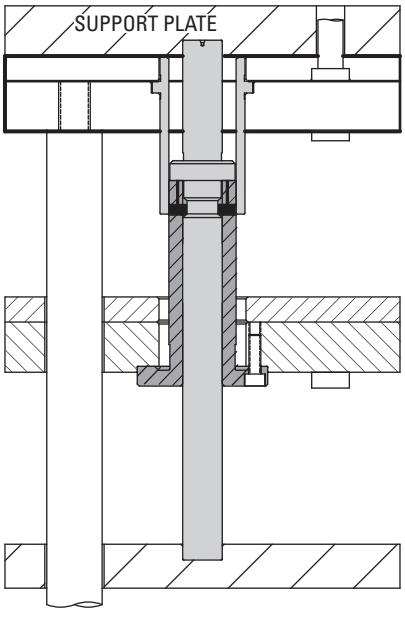


1. Ejector Plates Back



2. First Ejector Stroke

After a predetermined amount of travel, the latch mechanism latches onto the Center Rod, thereby fixing the position of the bottom (moving platen side) ejector plate assembly.



3. Second Ejector Stroke

The top (stationary platen side) ejector plate assembly continues to move through the "second" (or remaining) stroke until the top ejector plate assembly contacts the bottom of the support plate.

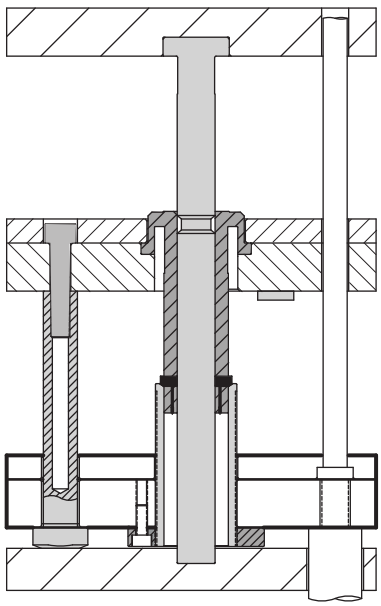
2-STAGE EJECTORS

Bottom Last Sequencing

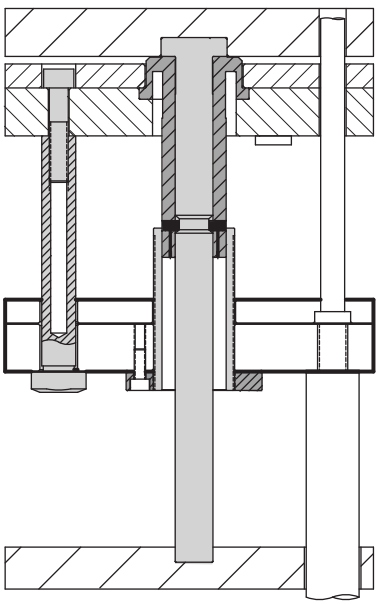
Patent No. 6.575.730

Patent No. 6.106.271

(Additional patents pending)

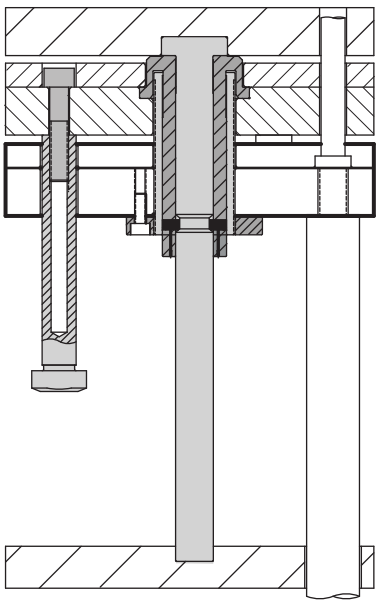


1. Ejector Plates Back



2. First Ejector Stroke

After a predetermined amount of travel, the latch mechanism latches onto the Center Rod, thereby fixing the position of the top (stationary platen side) ejector plate assembly.



3. Second Ejector Stroke

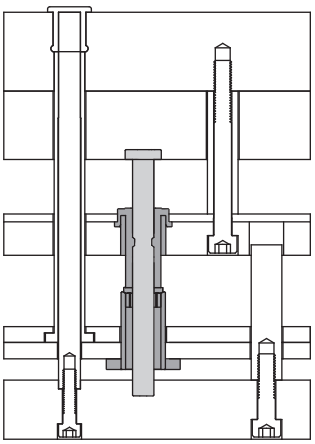
The bottom (moving platen side) ejector plate assembly continues to move through the "second" (or remaining) stroke until the bottom ejector plate assembly contacts the top ejector plate assembly.

2-STAGE EJECTORS

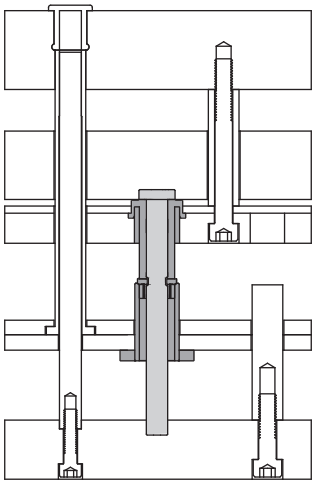
Application Examples

2-Stage Ejector Bottom Last – TSBL
Application Example 1

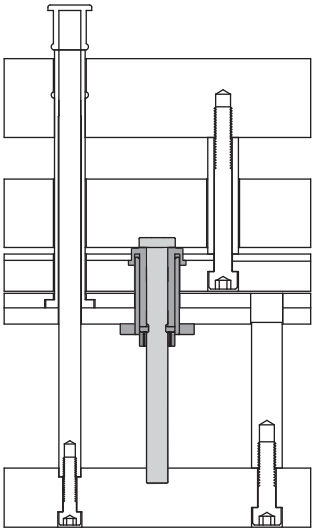
1. First ejector stroke lifts cavity plate and ejector sleeve. Center pin remains back. Part is free to be ejected.
2. Second stroke moves the ejector sleeve, releasing the part from cavity. **This configuration is recommended for parts with outside details with smooth or round edges.**



1. Ejector Plates Back



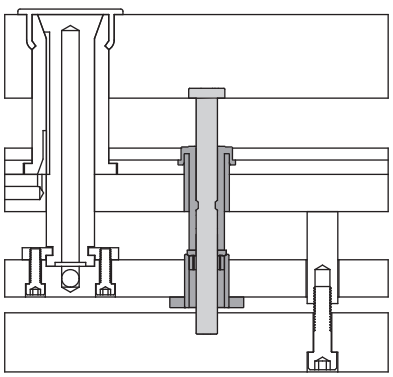
2. First Ejector Stroke

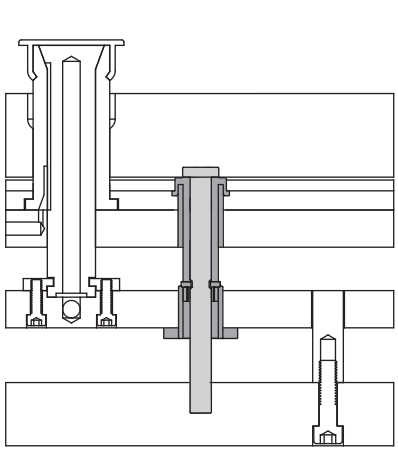


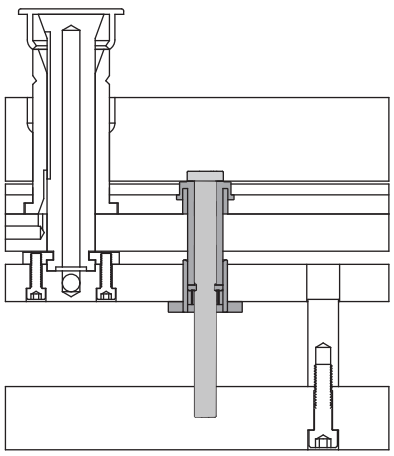
3. Second Ejector Stroke

2-Stage Ejector Bottom Last – TSBL
Application Example 2

1. First ejector stroke pulls the central core pin and sleeve forward. Part is released from cavity.
2. Second stroke pulls the center pin and part forward. Because of plastic elasticity the part is stripped from core. **Recommended for parts with an inner undercut – a circular detail placed on the edge (for example, inward undercut).**





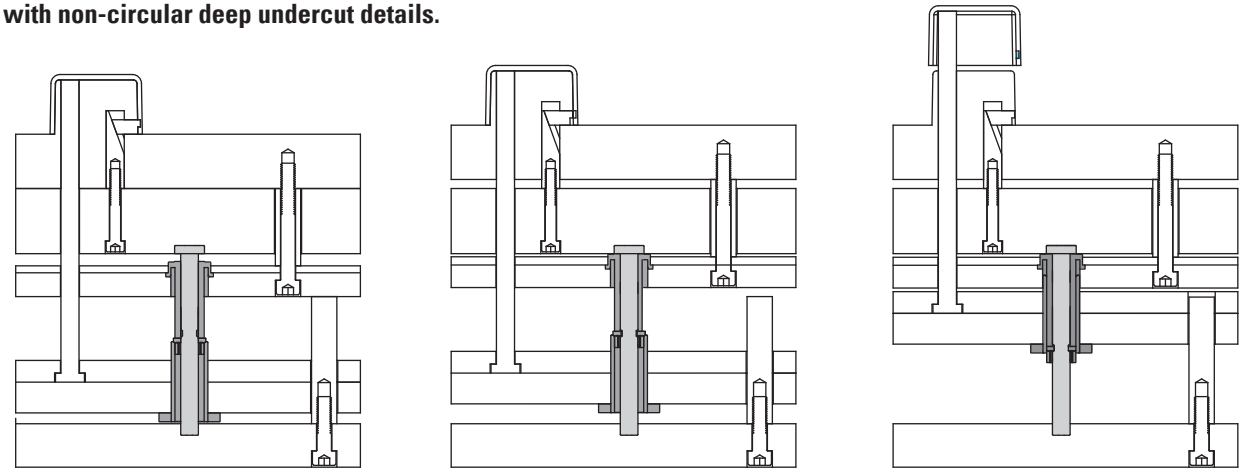


2-STAGE EJECTORS

Application Examples

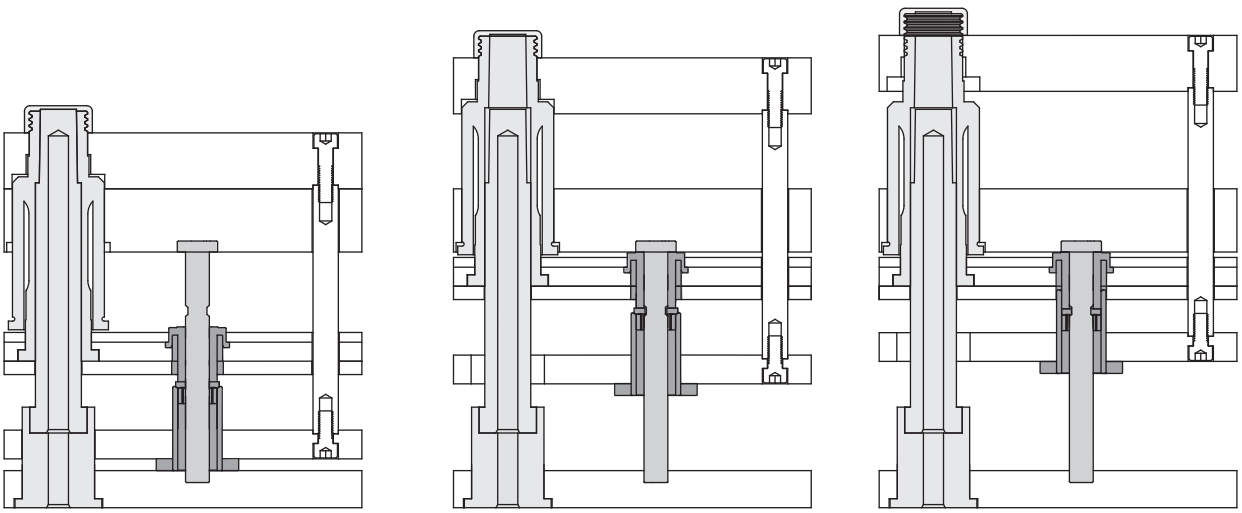
2-Stage Ejector Bottom Last – TSBL
Application Example 3

1. First ejector stroke moves forward the cavity plate with inner plate. This movement is forcing the edge to move inward. At the end of the stroke the edge clears the inner undercut.
2. Second stroke actuates the ejector pin. This releases the part from the core. **This configuration is recommended for parts with non-circular deep undercut details.**



2-Stage Ejector Bottom Last – TSBL
Application Example 4

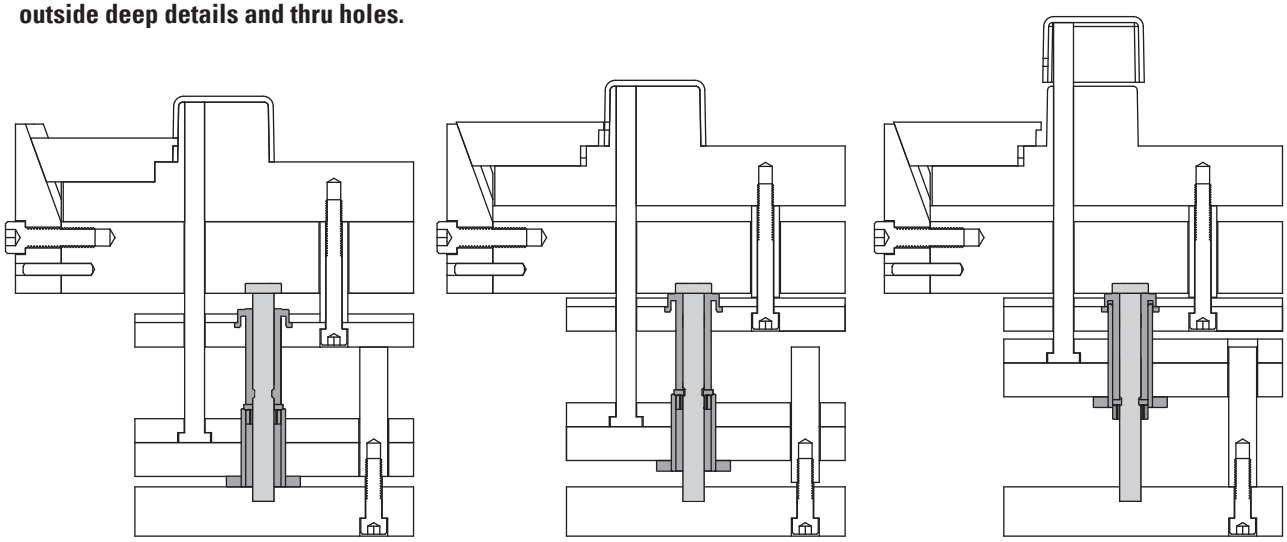
1. First ejector stroke lifts the collapsible core off the center pin. Collapse segments retract. After a certain traveling distance, when puller pin is clearing the inner side of segments, the positive collapse sleeve is actuated for positive collapse.
2. Second stroke moves the stripper plate past the end of the core so the part can be ejected from the mold.
   This configuration is recommended for complex undercuts, collapsible core applications.



2-STAGE EJECTORS
Application Examples

2-Stage Ejector Bottom Last – TSBL
Application Example 5

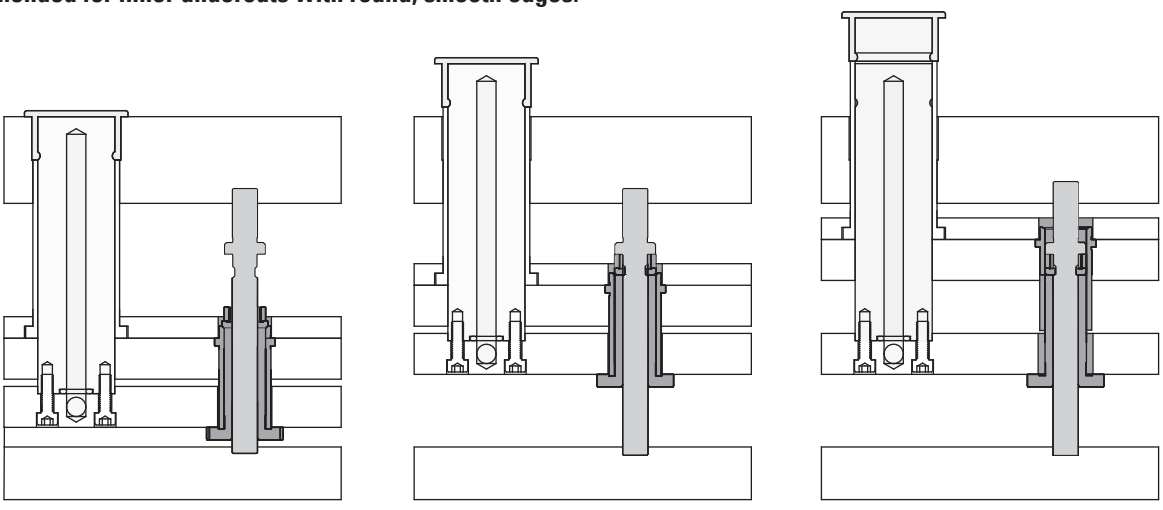
1. First ejector stroke moves the angle slide up. As a result the horizontal slide with the exterior detail pulls away from the part.
2. Second stroke actuates the ejector pin. Part is lifted behind the inner cavity. **This configuration is recommended for outside deep details and thru holes.**



1. Ejector Plates Back | 2. First Ejector Stroke | 3. Second Ejector Stroke

2-Stage Ejector Top Last – TSTL
Application Example

1. First ejector stroke lifts part, central pin and ejector bushing out of "B" plate.
2. Second stroke actuates the ejector bushing and the part is pushed out of the central pin core. **This configuration is recommended for inner undercuts with round, smooth edges.**



1. Ejector Plates Back | 2. First Ejector Stroke | 3. Second Ejector Stroke

Assembly and Installation Guidelines

- At end of first stroke, Body for Cam Fingers must seat firmly against Center Rod flange.
- The Body must not apply full static pressure against Cam Fingers at end of first stroke.
- The moldmaker must cut and/or grind the Center Rod to the required length prior to installation of the 2-Stage Ejector assembly into the mold base. Do not cut off more than the minimum stroke (H2). The recommended tolerance on the Center Rod length after the customer has cut the Center Rod is +0/-0.02mm or less.
- Stroke 1 (H1) is reduced by cutting and/or grinding the moving platen end of the Center Rod.
- Stroke 2 (H2) is reduced by cutting and/or grinding the stationary platen end of the Center Rod. Minimum H2 specified in table does not include additional stop pins to stationary-side spacer plate. To reduce H2 even further than what is specified in table, add stop pins.
- All 2-Stage Ejectors in a mold must be cut to the same strokes.
- It is recommended that guided ejection be used.
- Ejector speed must be controlled, ensuring that excessive shock loading does not occur.
- 2-Stage Ejectors are not suitable for severe load conditions.
- 2-Stage Ejectors must not be exposed to temperatures that exceed 150˚C (300˚F) at any time.
- Lubricate all metal-to-metal contact areas initially and periodically as required. A good grade of moldmakers non-melting type grease for the appropriate temperature should be used.

Assembly and Installation Guidelines

- At end of second stroke, Body for Cam Fingers must seat firmly against Center Rod head or spacer plate.
- The moldmaker must cut and/or grind the Center Rod to the required length prior to installation of the 2-Stage Ejector assembly into the mold base. The recommended tolerance on the Center Rod length after the customer has cut the Center Rod is +0/-0.02mm or less.
- The moldmaker must cut and/or grind the Travel Sleeve to the required length prior to installation of the 2-Stage Ejector assembly into the mold base.
- Stroke 1 (H1) is reduced by cutting and/or grinding the moving platen end of the Center Rod.
- Stroke 2 (H2) is reduced by cutting and/or grinding the moving platen end of both the Center Rod and the Travel Sleeve.
- All 2-Stage Ejectors in a mold must be cut to the same strokes.
- It is recommended that guided ejection be used.
- Ejector speed must be controlled, ensuring that excessive shock loading does not occur.
- 2-Stage Ejectors are not suitable for severe load conditions.
- 2-Stage Ejectors must not be exposed to temperatures that exceed 150˚C (300˚F) at any time.
- Lubricate all metal-to-metal contact areas initially and periodically as required. A good grade of moldmakers non-melting type grease for the appropriate temperature should be used.
- A minimum of (4) Puller Pins should be used with each mold. Larger molds may require additional Puller Pins.
- The moldmaker must cut and/or grind the Puller Pins to the required length.
- Puller Pins are **not** included with Bottom Last Assemblies and must be ordered separately.

2-STAGE EJECTORS

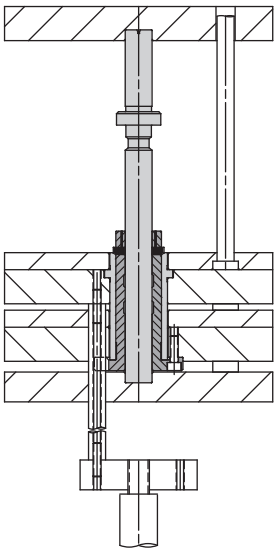
Component Information

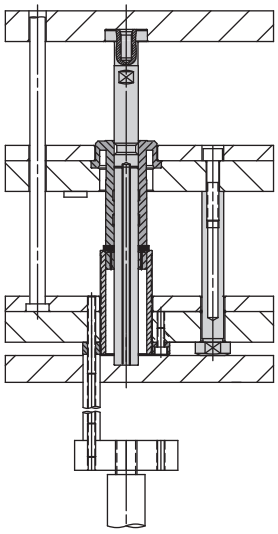
Alternate Configurations System Configuration for Central Ejector Rod Location

The illustrations below show one 2-Stage Ejector assembly that has been centrally located on the ejector plates.

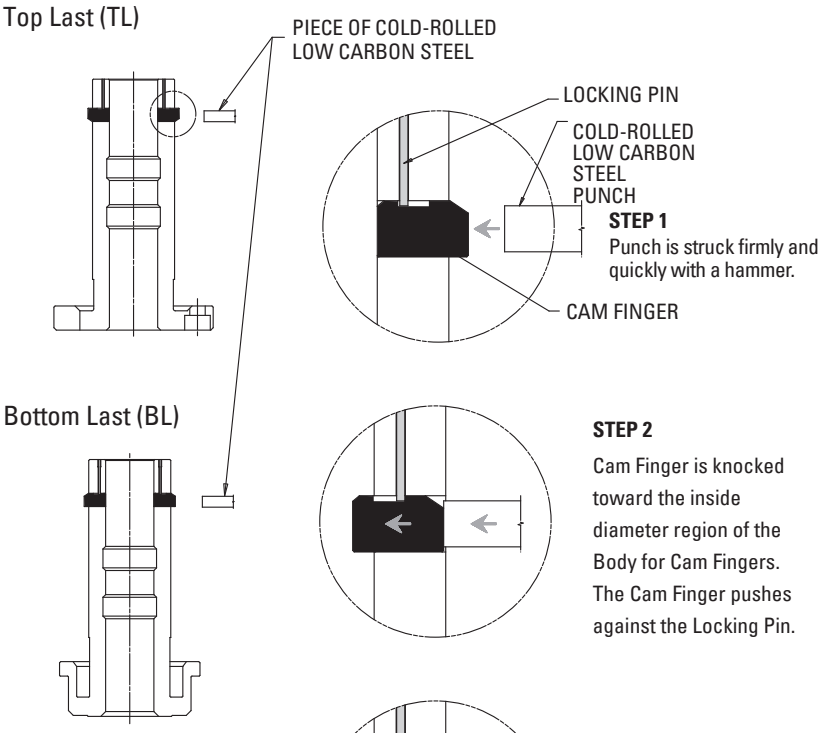
TL Assembly



BL Assembly



TL and BL 2-Stage Ejectors – Cam Finger Removal



STEP 1
Punch is struck firmly and quickly with a hammer.

STEP 2
Cam Finger is knocked toward the inside diameter region of the Body for Cam Fingers. The Cam Finger pushes against the Locking Pin.

STEP 3
A portion of Locking Pin breaks cleanly away and travels with the moving Cam Finger toward the inside diameter of the Body for Cam Fingers.

STEP 4
Both the Cam Finger and broken piece of Locking Pin drop into the inside diameter of the Body for Cam Fingers.

NOTES:

- Cold rolled, low carbon steel must be used as a removal punch to avoid damaging the Cam Fingers and/or Body.
- The contact surface of the punch (where it rests against the Cam Finger) should be profiled with a curved surface that matches the exposed surface of the Cam Finger.
- Ensure that Body for Cam Fingers is firmly retained before attempting Cam Finger removal.

*l_0: Length of ejector plate

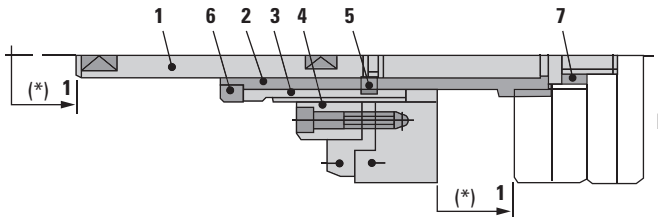

Fig. 2

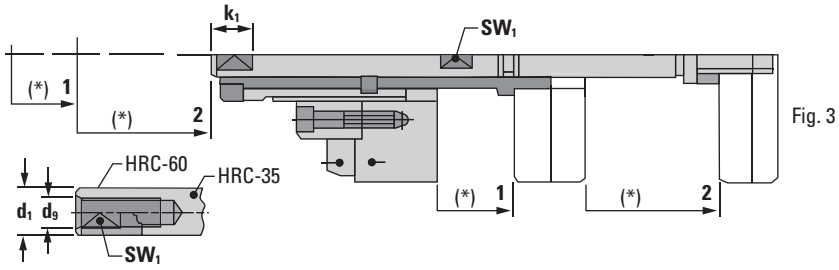

Fig. 3

1. Ejector rod
2. Ejector sleeve
3. Adjusting bush
4. Assembly flange
5. Segments
6. Stop ring
7. Spacer

Fitting:

1. Mount ejector rod #1 together with ejector plate. For safety please use LOCTITE C 242.
2. Move over parts #2, 3 and 4 together and tighten up part #3 (SW2 see chart).
3. Tighten up adjusting bush #3 with assembly flange #4.
4. Fix assembly flange.

Recommended lubricants: C 135, C 160, C 170, etc.

Installation Instructions:

This device is preferably screwed together with the hydraulic machine ejector. The required internal or external thread of part #1 has to be made adequately. The ejector rod #1 may not be shortened by more than length k1, if the total stroke h3, including a possible deeper run in of part #1 into part #2, is not maintained. By rotating adjustment of bush #3 the first stroke h1 is continuously adjusted. With stroke h1 both ejector pin plates are moved simultaneously. On the following stroke h2 only the second ejector pin plate movement is continued. Choose the thickness of the spacer ring #7 so that there is at least 0.05mm clearance between the ejector pin plates (see **Fig. 1**).

TWO-STAGE EJECTORS

Two-Stage Single-Stroke Ejector | Adapter with Screw

Two-Stage Single-Stroke Ejector – FW 1850

The two-stage single-stroke ejector can be integrated into ejection molding tools. This ejector automatically divides the motion into two sequential strokes.

The functional sequence associated with this makes it possible to create new mold ejection mechanisms.

INTERNAL LATCH LOCK

Benefits and Selection Table

DME's Internal Latch Lock Allows Precision Control of Mold Plate Latching

U.S. Patent No. 5,494,435

DME's unique internally-mounted latch lock mechanism adapts to a number of mold base sizes and plate thicknesses. It is available in four sizes to accommodate most standard DME stripper plate mold bases. Two travel ranges and two center puller pin lengths are available for each of the three latch lock sizes. Once installed, DME's Internal Latch Locks control the sequence of one parting line opening after the first parting line has traveled a predetermined distance. After installation there are no adjustments that can be accidentally changed. The Internal Latch Locks are most commonly used on DME AX-Series stripper plate mold bases but can be used on other DME stripper plate mold bases as well.

- Four diameter sizes to choose from – 28mm, 34mm, 45mm and 60mm – depending on the size of the mold and the application
- Two travel ranges and two center puller pin lengths to choose from for each of the four sizes
- Hardened steel components for longer life
- Latching mechanism has built-in travel limitation
- When latch is released, latching cams hold released stripper plate in fully traveled position
- Easy set-up of timing for latching mechanism
- Internal installation avoids interferences with water line connectors and externally mounted components

DME's Internal Latch Lock allows control of the mold plate opening sequence on mold bases with stripper plates. It enables one plate or group of plates to be latched together while the first parting line opening occurs. Then, after a predetermined amount of travel, the latch lock releases the latched plate or group of plates for the remaining parting line or parting lines to open.

INTERNAL LATCH LOCK

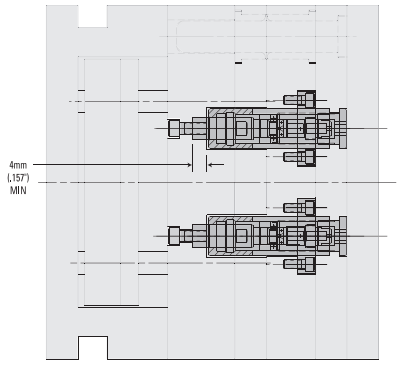
Typical Application Design Guidelines

Basic Selection and Application Design Guidelines

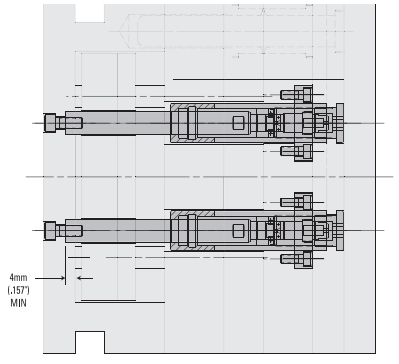
1. Select the appropriate Internal Latch Lock size – 28mm diameter (small), 34mm diameter (medium), 45mm diameter (large) or 60mm diameter (extra) based on the width of the mold base, as indicated in the chart on page 123. However, large molds, thick plates or heavy load applications may require the next largest size assembly than is specified.
2. Select the appropriate travel range from the two choices for each size in the table on page 123. This selection is based on the specific application requirements for the amount of travel that must occur at one parting line prior to the latch being released. The total travel requirements are based on the amount needed for the application as explained above, plus 3mm (.12") minimum additional allowance. This added 3mm minimum will make sure the full required travel has occurred before the latch lock starts its releasing action.
3. Select the appropriate length for the center puller pin from the two choices for each size in the chart. The length of the pin is determined by the specific application including the mold base plate thicknesses, where the pin will be mounted, etc. If possible, the center puller pin should be mounted in the support plate. However, some applications require the center puller pin to be mounted in the bottom clamping plate. This will depend on the travel or the length of the split sleeve component which controls the travel and the plate thicknesses in the mold base.
4. The answers to the above items (1-3) should establish a specific item number assembly from the table on page 123.
5. A minimum of four assemblies are recommended per mold. However, for larger molds, thick plates, or an application where loads are near maximum, additional assemblies and/or next largest size assemblies may be required. An application must never exceed the maximum recommended load values. A balanced load must be maintained to avoid cocking and binding which could cause severe overloading. Only one size latch lock assembly should be used in each mold base.
6. The center puller pin should be counterbored into its mounting plate 4mm (.157") minimum for most applications, as shown in the drawings at right. This counterbore aligns the center puller pin with the other components in the assembly.

U.S. Patent No. 5,494,435

7. The most common applications for the latch locks are for the DME AX-Series stripper plate mold bases. However, many other types of stripper plate mold bases can also be used with this internal plate latching mechanism. It is important to make sure that the leader pin lengths in all applications are long enough to fully engage the stripper plate through its full travel. The latch lock mechanism latches two plates together but is not intended to provide guidance. Instead, it relies on the leader pins in the mold for proper alignment and support of the actuated stripper plates.
8. In the fully latched position the Internal Latch Lock mechanism will allow movement of approximately 0.4mm (.016") for the 28mm diameter and 34mm diameter assemblies and approximately 0.5mm (.020") for the 45mm and 60mm diameter assemblies.
9. Injection molding machine mold opening speed may have to be reduced in order to make sure that excessive shock loading does not occur.
10. The Internal Latch Lock is not recommended for severe load applications.
11. The Internal Latch Lock must not be exposed to temperatures that exceed 150°C (300°F) at any time.
12. Lubricate all metal-to-metal contact areas initially and periodically as required. A good grade of moldmakers non-melting type grease for the appropriate temperature should be used.
13. An optional sleeve can be added to the latch lock that provides two additional functions. However, this optional sleeve is not required for the latch lock function. The optional sleeve can be added to incorporate guided ejection and/or normal ejector assembly return functions in the mold. Refer to page 127 for specific information regarding this sleeve option.



Internal Latch Lock application with center puller pins mounted in the support plate. This is typically done in applications where the travel is shorter and/or when mold plates are thicker. DME AX-Series mold base is shown in this typical application.



Internal Latch Lock application with center puller pin mounted in the bottom clamping plate. This is typically done in applications where the travel is longer and/or when mold plates are thinner. (Some applications may require a thicker than standard bottom clamping plate.) DME AX-Series mold base is shown in this typical application.

INTERNAL LATCH LOCK

Set-Up Dimensional Information

(1) Supplied to provide maximum travel with no cut off. To reduce travel between maximum and minimum, cut off slotted travel limiting sleeve on threaded end only per installation data. Cut off to no less than minimum travel; maintain close tolerances per installation data.

(2) This set-up dimension is critical and must be maintained as specified to properly locate pin and cam body to latch. Dimension W is from top of X-1 stripper plate to top end of center puller pin. See installation data for additional information.

(3) "Y" mounting plate dimension will be the "A" plate for AX-Series stripper plate mold bases.

(4) This counterbore depth is critical and must be maintained as specied to locate split sleeve, cam body, and pin to latch.

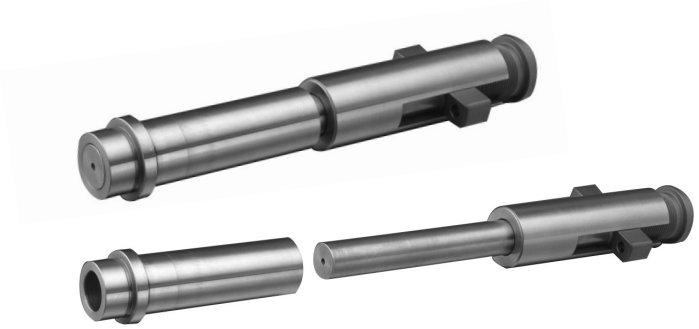
Cam Finger Replacement Kit includes: (4) cam fingers, (6) locking pins, and (6) rubber springs (two extra locking pins and rubber springs are included).

INTERNAL LATCH LOCK

Optional Guided Ejection and Return Sleeves



U.S. Patent No. 5,494,435

Optional Guided Ejection and Return Sleeves are no longer available

Add Guided Ejection and Return Pin Functions to Internal Latch Lock Mechanism with the Optional Sleeve

The optional Guided Ejection and Return Sleeves, although not required for the Internal Latch Lock, can add two functions to the mold base that are typically required in most molds. These optional sleeves can add guided ejection and ejector assembly return functions to the mold base. Additionally, these added functions fall within the space envelope of the plate latching mechanism. However, these optional sleeves do not create an early ejection return system that is occasionally required in some applications.

- Sleeves can add guided ejection function to mold base along with plate latching mechanism
- Sleeves can replace function of return pins in mold base for most applications using the plate latching mechanism
- Sleeves fit around the center puller pin of the plate latching mechanism and are mounted in the ejector assembly, thus eliminating the need for additional mold space usually required for the guided ejection and return pin functions

60mm DIA (Extra)	DKL6011, DKL6012, DKL6021 & DKL6022	OPTIONAL SLEEVES NOT OFFERED FOR THIS DIAMETER																				

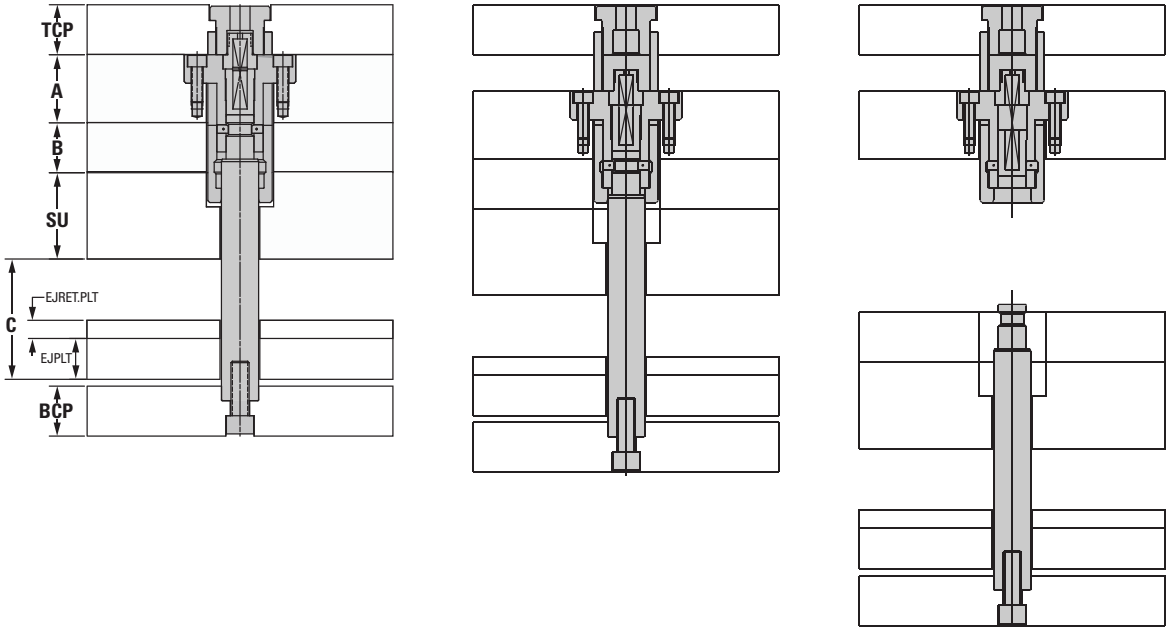
NOTE:

1. Choose the appropriate length sleeve so that it can be cut off to a length that will fully return the ejector assembly. See installation data.
2. The center puller pins must support and guide the sleeves, as well as the ejector assembly. The pins must have sufficient bearing surface contact as specified by dimension "L41" minimum.
3. Additional bearing surface contact for the center puller pins may require a thicker bottom clamping plate or the addition of another plate to the bottom of the mold for some applications. See installation data.
4. A minimum of four assemblies are typically recommended per mold. However, for larger molds, thick plates, or an application where loads are near maximum, additional assemblies and/or next largest size assemblies may be required. An application must never exceed the maximum recommended load values. A balanced load must be maintained to avoid cocking and binding which could cause severe overloading. Only one size latch lock assembly should be used in each mold base.

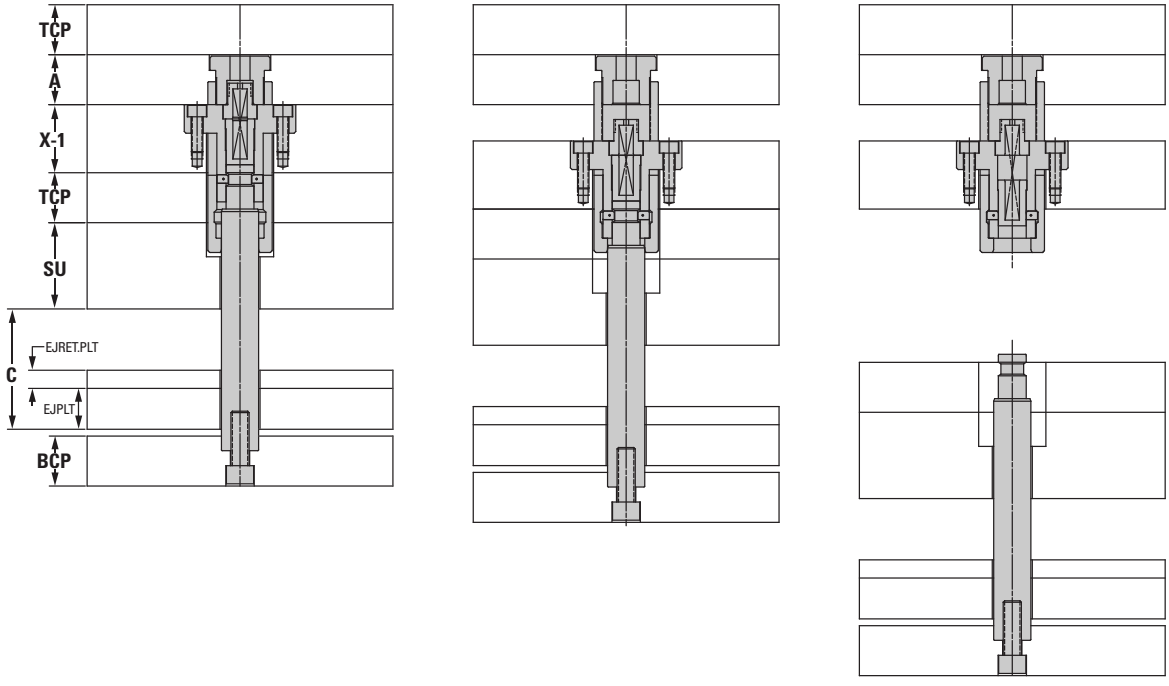
INTERNAL LATCH LOCK

Typical Applications

TO FLOAT “A” PLATE AWAY FROM TOP CLAMP PLATE WHILE LOCKING “A” AND “B” PLATES.
CENTER ROD TIED INTO BOTTOM CLAMP PLATE.



TO FLOAT “X-1” PLATE AWAY FROM “A” PLATE WHILE LOCKING “X-1” AND “B” PLATES.
CENTER ROD TIED INTO BOTTOM CLAMP PLATE.



EXTERNAL LATCH LOCK

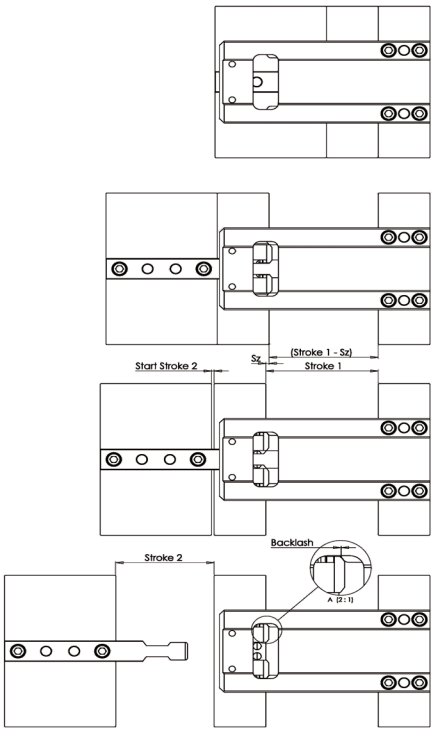
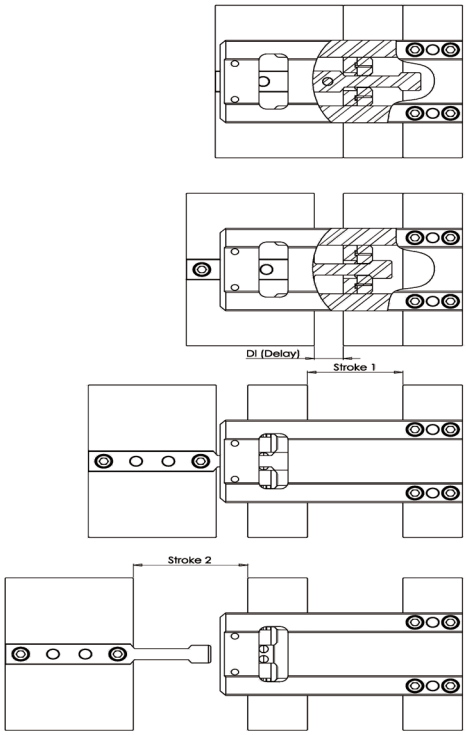
DME External Latch Lock Allows Precision Control of Mold Plate Latching Operation

- Ideal for molds with floating plates, including stripper plates & 3-plate molds
- Floating plates are positively locked in place during mold opening and closing, preventing potential mold damage
- Ensures floating plates will be where they should be throughout the life of the mold
- Positively and precisely positions plates every time the mold opens and closes, allowing molds to run faster
- Simplifies mold design while improving design flexibility
- Designed and engineered to hold large loads while saving space inside the mold
- Simple design reduces machining time & labor costs
- Standardized components simplify mold maintenance
- Eliminates springs & associated play in plates, and reduces mold maintenance
- Standard sizes accommodate most mold base sizes and stroke lengths
- (4) sizes of housings with (2) housing lengths each; (3) puller bar lengths
- Puller bars & housing may be shortened as desired
- Stroke may be with or without delay

Example without delayed stroke sequence



Example with delayed stroke sequence

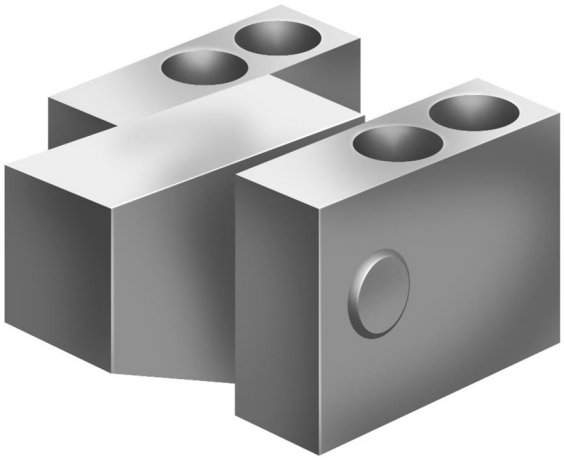


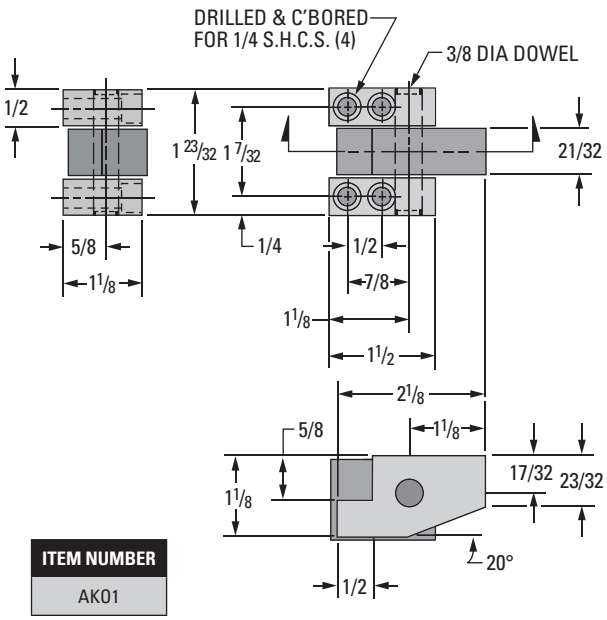
w1 (2PCS)	INTENDED MOLD SIZE	TR MAX. (TRACTION FORCE)	LF MAX.(LOCKING FORCE)	Sz	BACKLASH
55	246 x 246	20kN	1.5kN	2.0	0.25
65	396 x 396	35kN	2.0kN	2.3	0.25
80	646 x 646	50kN	3.0kN	2.7	0.30
95	796 x 796	80kN	4.0kN	3.2	0.35

SA..PU - shock absorber, buffer damper
DI - maximum delayed stroke
Sz - switching zone, stroke 2 begins slightly before the end of stroke 1
Backlash - Segments need clearance/play to allow the locking/unlocking sequence (built into the product)
TF - traction force (always retain the lowest)
LF - locking force (maximum holding force after stroke 1)

ACCELERATED KNOCK-OUTS

Accelerated Knock-Outs – Typical Application



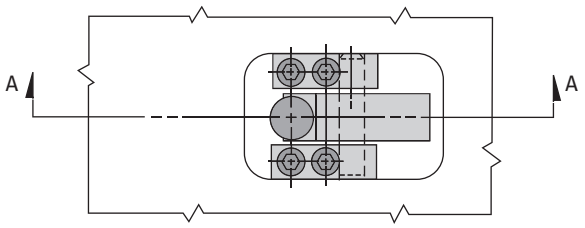


ITEM NUMBER
AK01

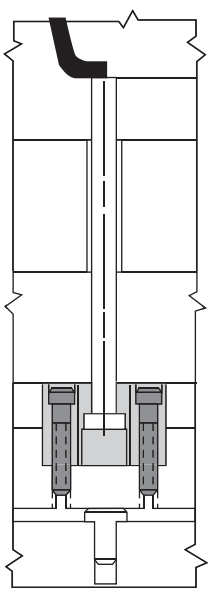
The DME Accelerated Knock-Outs are simple in design, using a pivot-type motion for accelerated ejection. Mechanical advantage is 1:1. They will accommodate ejector pins up to 3/8" in diameter. (Pins with head diameters greater than 5/8" can be ground down to fit.)

Simplicity of design permits DME Accelerated Knock-Outs either to be inserted into the ejector plate (as shown below) or top-mounted, depending on space available for the ejection movement.

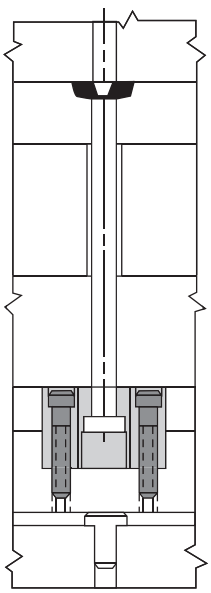
Typical Applications



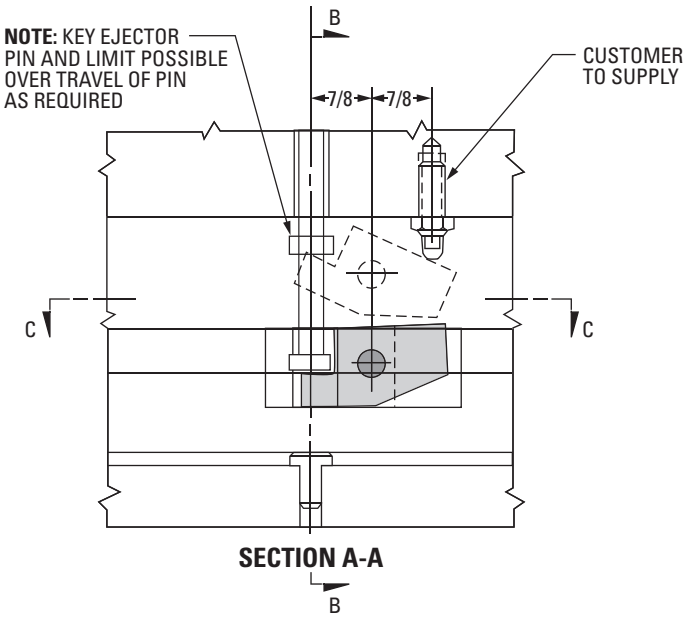
VIEW C-C



SECTION B-B
APPLICATION 1



SECTION B-B
APPLICATION 2



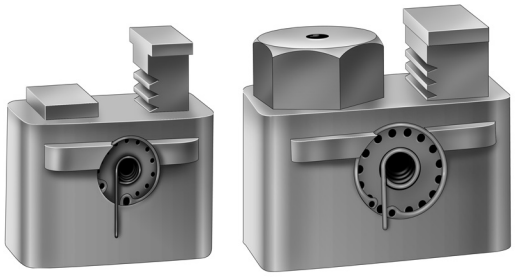
SECTION A-A

ACCELERATED EJECTORS

Accelerated Ejectors – General Information

DME Accelerated Ejectors use a rack and pinion mechanism to provide up to 5/8" additional ejector stroke. Their simple, linear movement can be used to increase the speed and stroke of ejector pins, ejector sleeves or entire ejector assemblies. The flanges and rounded corners on these units facilitate installation within the ejector assembly. The rectangular cross-section of the racks prevents them from rotating. Included with each unit is a bumper stud, which ensures positive return of the racks when the ejector assembly is fully returned.

DME Accelerated Ejectors are available in two sizes (small or regular) and two types (pin or bumper). The pin type units are used for individual ejector pin acceleration (one unit per pin). Bumper type units are used for accelerating the entire upper ejector assembly in a dual ejector assembly mold (a minimum of four units are normally used in this application).



U.S. Patent No. 3,893,644

Increase the speed and stroke of the entire ejector assembly. DME's Accellerated Plate Ejectors mount to the ejector assembly providing up to 11.6-32 mm of additional ejector stroke.

EARLY EJECTOR RETURN ASSEMBLY

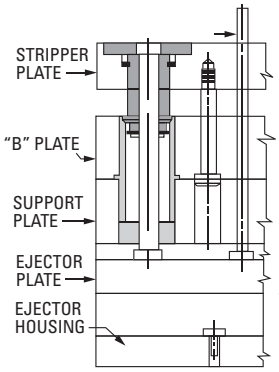
Early Ejector Return Assembly – Installation

Installation for Ejector Pin Travel

Beyond Stripper Plate

NOTES:

1. Care should be taken to ensure that the ejection assembly is evenly loaded. It is recommended that Guided Ejection be used.
2. Four (4) early ejector return assemblies are recommended per mold. Larger molds may require additional assemblies.
3. Timing of all units to be within ±.005 inch.



STRIPPER PLATE MOVES FORWARD UNTIL CAM FINGERS SLIP OUTWARDLY INTO C'BORE IN BUSHING AND EJECTOR PLATE CONTINUES TO TRAVEL

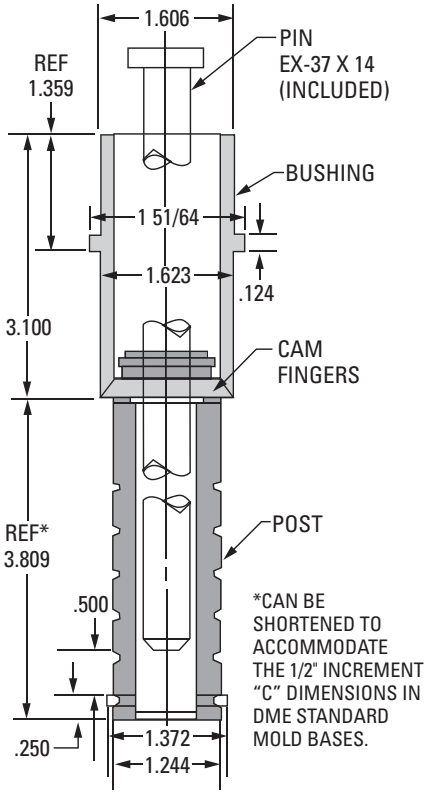
EARLY EJECTOR RETURN ASSEMBLY

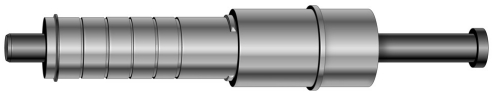
Early Ejector Return Assembly – General Information

DME Early Ejector Return assemblies are designed to save you time and money. Unique design permits simple, low-cost internal installation. Internal installation also helps control your maintenance costs as there are no outside projections to break or bend or to interfere with water line connections or slide movements. All wear surfaces are hardened to provide long life. The drawings below illustrate the simple, positive operation.

Early Ejector Return Unit Assembly



For returning ejector plate before mold is closed

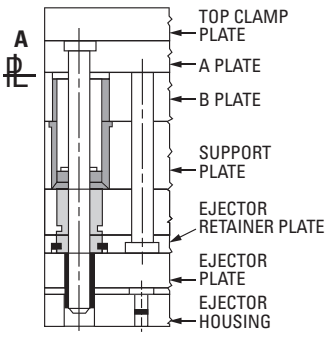


U.S. Patent No. 3,516,302

Early Ejector Return Operation Sequence

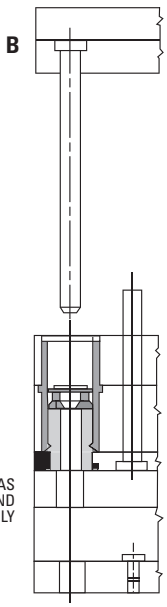
Normal Installation in Mold Base

VIEW 1



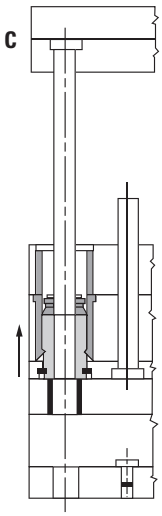
MOLD CLOSED IN MOLDING POSITION

VIEW 2



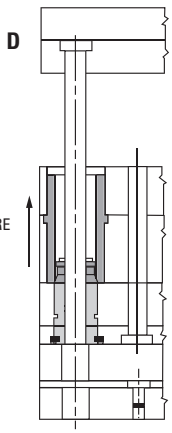
MOLD FULL OPEN – PRESS K.O. ROD HAS PUSHED EJECTOR PLATE FORWARD AND CAM FINGERS HAVE SLIPPED INWARDLY FROM C'BORE IN BUSHING ALLOWING EJECTOR PLATE TO MOVE FORWARD.

VIEW 3



MOLD CLOSING – EARLY EJECTOR RETURN CAM FINGERS HAVE JUST CONTACTED ACTUATOR PIN.

VIEW 4



MOLD CONTINUES CLOSING – EJECTOR PLATE HAS BEEN PUSHED ALL THE WAY BACK. CAM FINGERS HAVE SLIPPED OUTWARD INTO COUNTERBORE IN BUSHING ALLOWING ACTUATOR PIN TO SLIP BY. MOLD CONTINUES CLOSING UNTIL COMPLETELY CLOSED AS IN VIEW 1.

ITEM NUMBER	Early Ejector Return Assembly
ER101	

ITEM NUMBER	Replacement Parts Kit
ER101RK	Kit consists of: 1. (1) set of cam fingers 2. (1) guide washer 3. (1) snap ring (lower) 4. (1) snap ring (upper)

KNOCK OUT PUCKS

Knock Out Extension Pucks

KO Extension Pucks standardize mold ejector systems by unifying press knock out rod lengths. Wide range of thread configurations available for many different press types.

JIFFY LATCH-LOK™ ASSEMBLIES

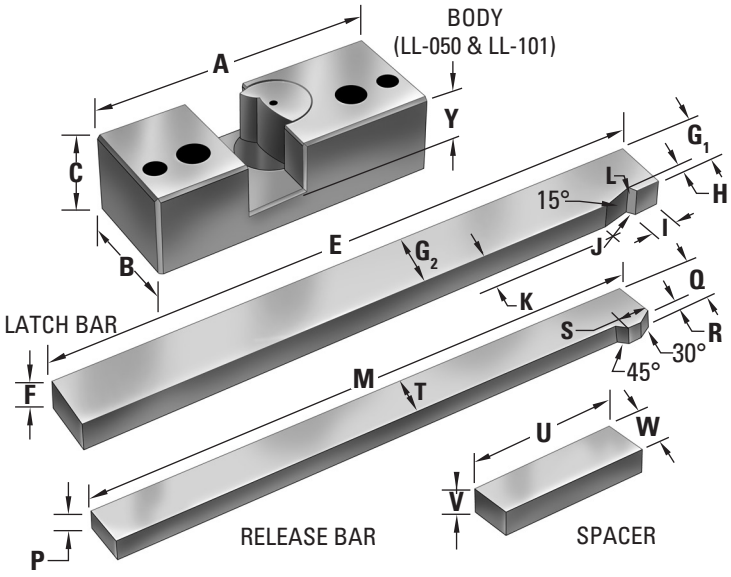
Jiffy Latch-Lok™ Assemblies – General Information

A Simple, Easy-to-Install Device to Mechanically Float Plates

The DME Jiffy Latch-Lok™ provides new freedom in design to mechanically float plates. There is no need for electric switches, pneumatic controls or timing devices with delicate adjustments. The action of the Jiffy Latch-Lok is positive.

Once properly installed, the Latch-Lok eliminates the possibility of smashing the mold because there are no adjustments that can change, or connections that can be accidentally knocked off. The Jiffy Latch-Lok is available in sizes for regular or heavy-duty operation. It also comes in regular or 90° (right angle) designs to provide maximum installation flexibility.

A minimum of four assemblies required per mold. Large molds may require additional assemblies.



RECOMMENDED USAGE BASED ON MOLD BASE WIDTH	
≤ 10"	LL050
11" to 15"	LL101 or LL151
> 16"	LL201

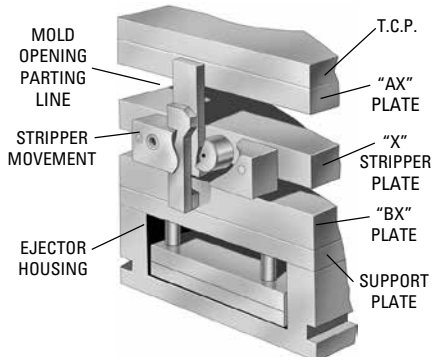
JIFFY LATCH-LOK™ ASSEMBLIES

Jiffy Latch-Lok™ Assemblies – Application Information

To Control Stripper Plate

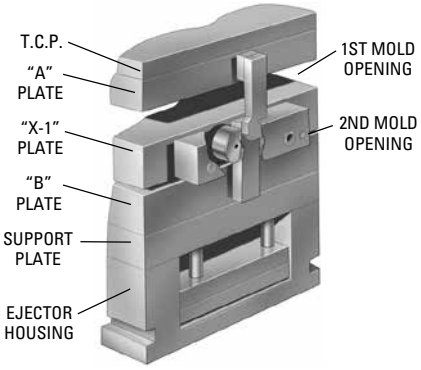
Cycle time is often wasted waiting for the press knock-out bar to function. With the application of the DME Jiffy Latch-Lok, as illustrated to the left, the stripper plate is moved in a secondary action of the mold opening without the aid of the press knock-out bar.

The Jiffy Latch-Lok permits you to shorten the ejection stroke, improve cycle time and increase the number of parts per shift.



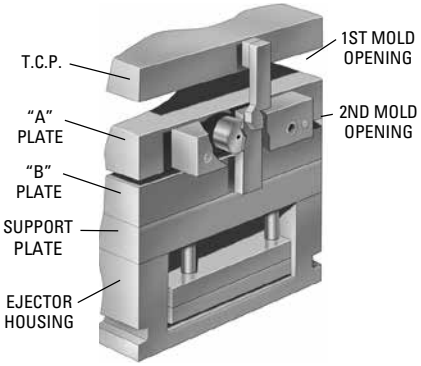
To Float "X-1" Plate Away from "A" Plate while Locking "X-1" and "B" Plates

In this application of the Jiffy Latch-Lok, the "X-1" plate is floated away from the "A" plate in the first mold opening sequence. At a predetermined opening (you determine the distance) the "X-1" plate is released from the "B" plate for the second mold opening. This application of the Jiffy Latch-Lok is particularly effective on "AX" or three-plate top runner molds.



To Float "A" Plate Away from Top Clamp Plate while Locking "A" and "B" Plates

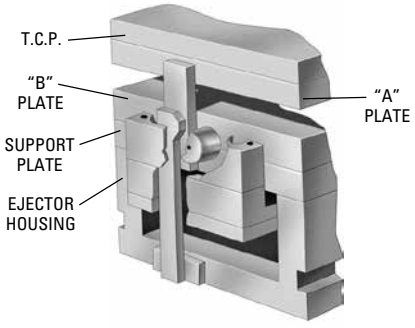
In the DME Latch-Lok application illustrated here, the "A" plate moves away from the top clamp plate in the first mold opening. During this portion of the cycle, the "A" and "B" plates are locked. As the release bar passes the rocker, the "A" and "B" plates part in the second mold opening.



Actuation of Ejector Assembly Without Aid of Press Knock-Out Bar (LL151 only)

For those mold applications where a shorter press stroke is required, the DME Jiffy Latch-Lok is extremely effective.

You can activate the Jiffy Latch-Lok at any time after the mold begins to open, and pull the ejector assembly forward. This simple action shortens cycle time and increases part production.



Can also be used for "Reverse" Ejection from the Stationary Side of the Mold.

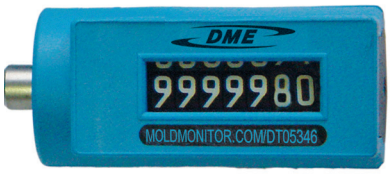
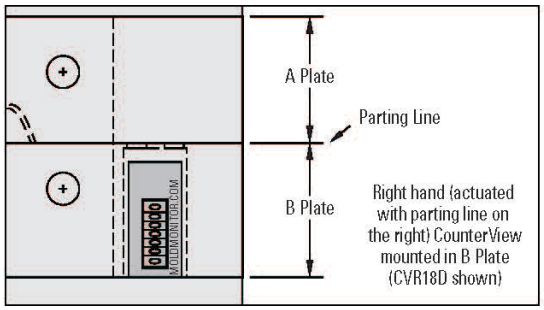
DME CYCLE COUNTER

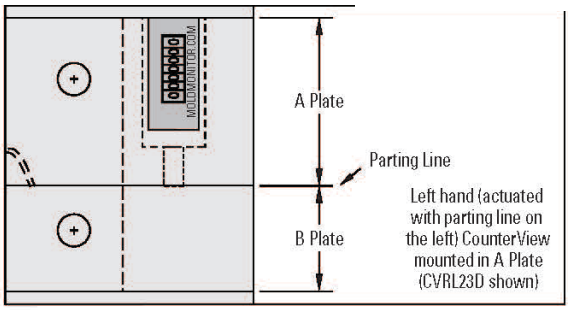
R-Series

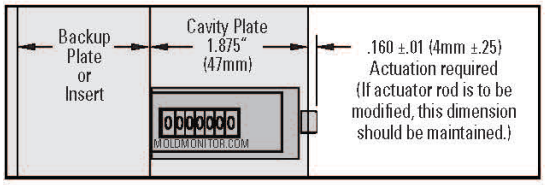
General Description

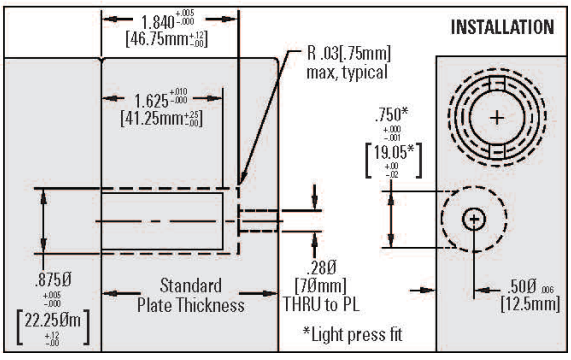
The DME Cycle Counter R-Series accurately monitors mold operation, validates process monitoring data, and assists mold maintenance procedures. With a maximum operating temperature of 250°F (121°C), this precise unit has a non-resettable, mechanical, 7-digit counter and a glass-filled nylon housing for rugged durability.





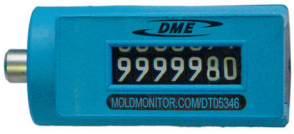






The R-Series can be installed in the A or B plates with a minimum thickness of 1.875" (47mm). Larger plates utilize a threaded rod (included with each) that is pre-machined to the appropriate length for standard plate thicknesses to provide consistent actuation.

Parting Line at Left



Each R-Series Counter includes the actuator. All except CVR18D and CVRL18D require attachment of the actuator rod to the threaded unit.

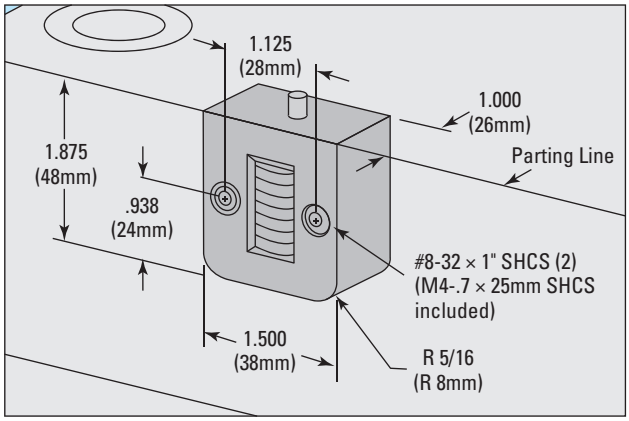
DME CYCLE COUNTER

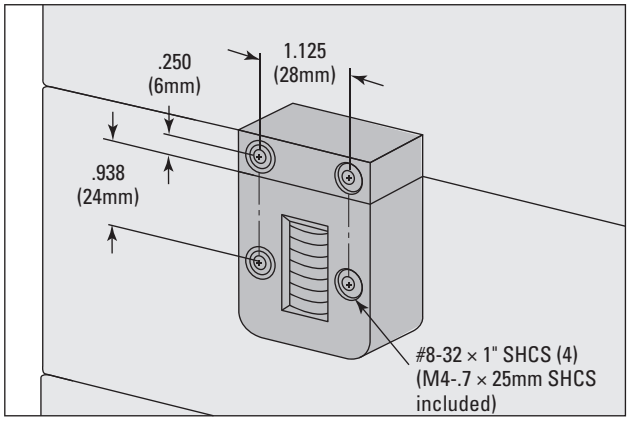
CCPL300/CCEM300 Series

General Description

The DME Cycle Counter accurately monitors mold operation, validates process monitoring data, and assists mold maintenance procedures. With a maximum operating temperature of 320°F (160°C), this precise device uses a non-resettable, mechanical, 7-digit counter to record the number of times a mold closes. Easily mountable to accommodate changeovers for different mold insert heights, the unit's counting mechanism relies on a sensor that detects when the mold has closed. Each mold cycle triggers the counting mechanism to increase the count on the display.



PARTING LINE MOUNT	
Parting line mount makes unit easily visible.	
CCPL300	INCH / METRIC Standard



EXTERNAL MOUNT	
Pocket machining not necessary. Designed specifically for retrofit applications.	
CCEM300	INCH / METRIC Standard

Benefits

- Positively monitors mold activity
- Confirms process monitoring data
- Maximizes mold maintenance procedures
- Glass-filled nylon housing for rugged durability

COUNTERVIEW® MOLD COUNTER

CVe Monitor®

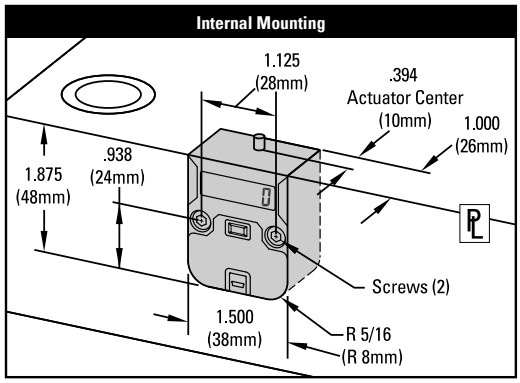
General Description

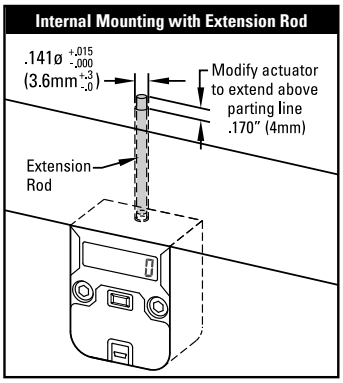
Expanding beyond the capabilities of the R-Series and 100/200 Series, the new CVe Monitor v2 tracks mold activity, allowing users to view the data on the display or from comprehensive reports using OnDemand software or the new CVe System.

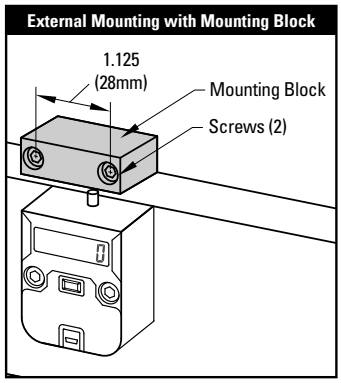
Benefits

- 7-digit LCD display with a push button to move through the display modes
- 4GB flash drive for file storage and 4+ year battery life
- Water resistant with an ingress protection rating of IP52
- Maximum temperature: 190° F (90° C)
- Dimensional compatibility with mechanical Counterviews.

Mounting Options







How to order:

- For installation below parting line (i.e. rails as shown in center drawing above), order (1) CVENTID or CVENTMD
- For installation outside of the mold (right drawing) order (1) CVEMBID or CVEMBMD

ITEM NUMBER	DESCRIPTION	MOUNTING STYLE	SCREWS (2)
CVEPLID	CVe Inch	Parting Line	#8-32 x 1" SHCS
CVEPLMD	CVe Metric	Parting Line	M4 x 25mm SHCS
CVENTID	CVe Inch (with 8"rod)	Extension (Includes 8" rod)	#8-32 x 1" SHCS
CVENTMD	CVe Metric (with 203mm rod)	Extension (Includes 203mm rod)	M4 x 25mm SHCS
CVEMBID	CVe Inch (with Mounting Block)	Parting Line	#8-32 x 1" SHCS
CVEMBMD	CVe Metric (with Mounting Block)	Parting Line	M4 x 25mm SHCS

REPLACEMENT PARTS	
ITEM NUMBER	DESCRIPTION
CVEINT	Internal Extension Rod (8"/203mm) including a hex key for CVe Monitor set screw removal
CVEXT	External Mounting Block including #8-32 x 1" SHCS (2)
CVEXT2	External Mounting Block including M4x25mm SHCS (2)

OEM-specific CVe Monitors are available with additional features. Contact DME for more information.

On-Mold Display Modes

Each device is provided at -25 cycles to allow for mold setup and initialization of the CVe Monitor. Once it reaches zero, all timers and data will reset on the monitor. During production, users can press the button on the front of the monitor and review the following information on the display:

Cycle Count
Total cycles for the life of the mold is presented on the main screen of the CVe Monitor.

Cycle Time
Since the first production cycle, the cycle time is shown in seconds for the life of the mold.

Cycle Time - Recent
Cycle time for the past 25,000 cycles.

Users can utilize the 4GB flash drive on the CVe Monitor by connecting the device to a PC using an industry-standard mini USB cable (see next page). Users press the button to get to the flash drive mode and then the storage area is represented on the PC by a new drive letter.

Efficiency Percentage
The percentage of time that the mold has been actively cycling vs being idle.

Efficiency Percentage - Recent
The percentage of time the mold has been active in the past 25,000 cycles.

Cycle Count Reset
A separate counter that can be reset to zero for interim monitoring of cycles when pressed and held.

COUNTERVIEW® MOLD COUNTER

CVe Monitor®

Alert Mode

Once data is initialized using the OnDemand software, users will be alerted to different modes on the device:

Preventive Maintenance

During initialization, the initial preventive maintenance point and the PM interval is entered and saved onto the CVe Monitor. Then, when the PM is within 10% of the initial point, the display will flash "PM Due" as shown at right. Users can then 'snooze' the alert by holding for 2 seconds, returning it to Total Cycles.

When a PM is performed using OnDemand software and noted as such, the date/time will be written to the CVe Monitor and then the alert is stopped until reaching 10% of the next PM point. If no PM is performed, the CVe Monitor will continue to alert the user until snoozed or the PM is ultimately recorded.

Low Battery

The CVe Monitor has a battery life of approximately 4.5 years in typical molding environments where temperatures are controlled. When the battery is within 6 months of its expected end of life, the display will flash as shown at right. Users can then 'snooze' the alert by holding for 2 seconds, returning it to the Total Cycles. The alert will appear every 30 days as a reminder to transfer the stored data to a new CVe Monitor.

Retrofitting and Removal

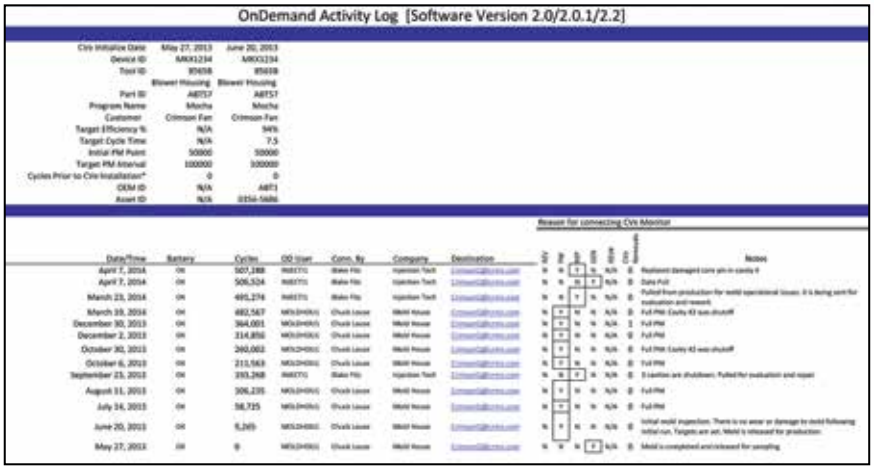
Users can view additional data by double-clicking the button on the monitor:

Retrofit CVe for CounterView Tools

During initialization, users can start the cycle count with the tool's actual cycle count from an existing CounterView or known cycles from maintenance records. Once entered, the user can see the total cycles for the tool, which includes the count of the cycles from the counter and those run with the CVe Monitor. In the screen at right, the tool had 1,000,000 cycles on it originally, but ran 507,288 cycles after the CVe Monitor was installed.

Removal Monitoring

When the CVe Monitor is removed from the tool for any reason (i.e. cleaning) the pins on the back of the device will record an event of its removal. After viewing the retrofit number above, the display will move into the screen shown at right, designating the number of times the monitor was removed from the mold.



Above: OnDemand software allows users to view data and keep a record of reports run, outlining the reason for the report generation including PM, general queries, revision changes, and repairs. Notes can be included and OnDemand records the person generating the document for accurate history.

FasTie®

Quick Ejector Tie-In System

Description & Use

In an injection molding press, the FasTie® system quickly "ties-in" the mold ejector plate to the press ejection system, dramatically reducing mold change time. The greatest time savings are realized in presses where space is limited and the ejector system is difficult to tie in using solid knockout bars.

The FasTie® coupler may be permanently mounted to the press ejector plate. The quick-connect locking mechanism in the coupler snaps mechanically onto the mold-mounted pull stud during mold installation.

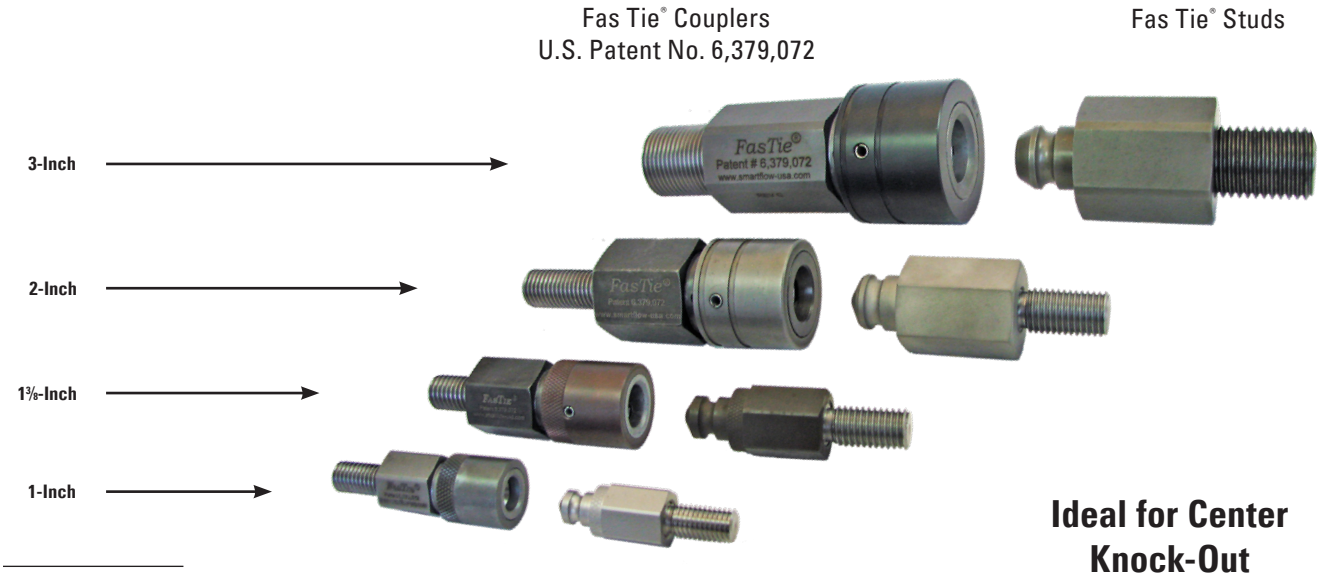
To release the knockouts, apply shop air to the coupler. The coupler opens to release the pull stud, disconnecting the press and tooling ejector plates. The coupler remains in the open position, ready for a new mold to be set.

For multiple knockout locations, an air manifold is recommended to release all couplers simultaneously. See the following catalog pages for installation examples.

The FasTie® couplers and pull studs are available in 4 sizes to suit various press sizes: 1", 1-3⁄8" 2"and 3". Mounting accessories such as center adapters and knockout bars are available to facilitate installation without additional machining to presses or injection molds

Features & Benefits:

- FasTie® installs easily into existing tapped holes; no additional machining is required
- FasTie® reduces mold setting time by quickly uncoupling, plus there are no loose parts to stow
- FasTie® remains coupled during mold cycling for increased "tie-in" reliability and reduced wear
- SpeedBar® adjusts quickly without tools to the exact length required [±1⁄2" (12.7 mm) from nominal in .006" (.15 mm) increments]*
- SpeedBar® relieves molders from the time and trouble of machining ejector bars to fit different molds*

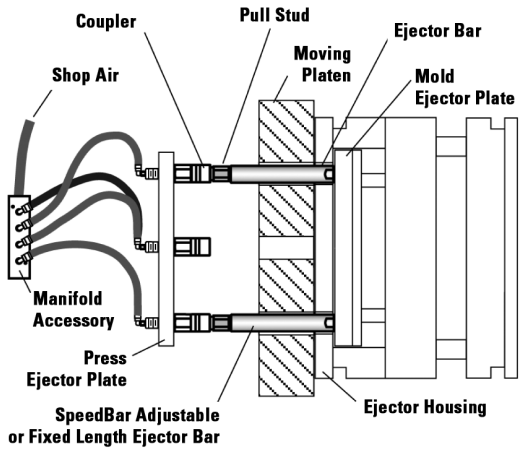


Ideal for Center Knock-Out

* 1-inch only

FasTie®

Quick Ejector Tie-In System Installation Examples



This setup is designed for custom molders who use a variety of injection molds with different knockout patterns and storkes.

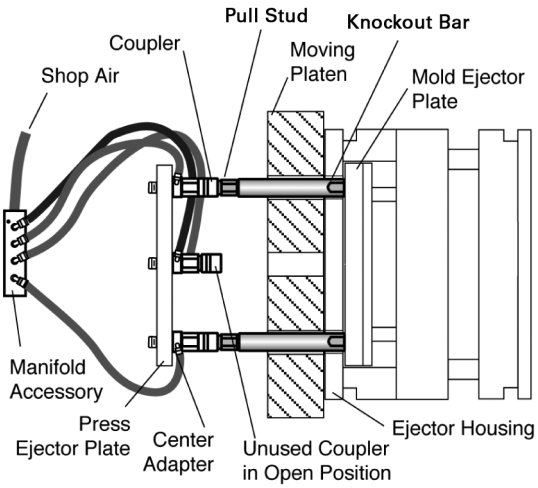
Typical Application - Couplers on Press Ejector Plate

Couplers are installed on the press ejector plate. Pull studs are placed at the end of the mold-mounted knockout bars for easy removal. Molds are changed quickly without accessing the back of the press knockout plate. For example, a press with 4 ejector positions may be running molds using only the horizontal positions, but the next mold may need the 2 vertical ejector positions. Ejector housing shown is 1.062" thick. Air manifold supplies air to each coupler for simultaneous coupler release.

Parts List

Qty	Part
2 or 4	FasTie Pull Stud
2 or 4	FasTie Coupler
2 or 4	Fixed Length Ejector Bars or SpeedBar® Adjustable Length Bars
1	Air Manifold with tubing

Animated Installation Examples appear on YouTube search for "burgerandbrowneng" or scan QR code



This setup is used where there is limited access to the back of the Press Ejector Plate. Custom molders using smaller presses will benefit from this application.

Alternate Application - Couplers and Center Adapters on Press Ejector Plate

Couplers are installed next to the press ejector plate. Pull studs are placed at the end of the mold-mounted knockout bars for easy removal. Molds are changed quickly without accessing the back of the press ejector plate.

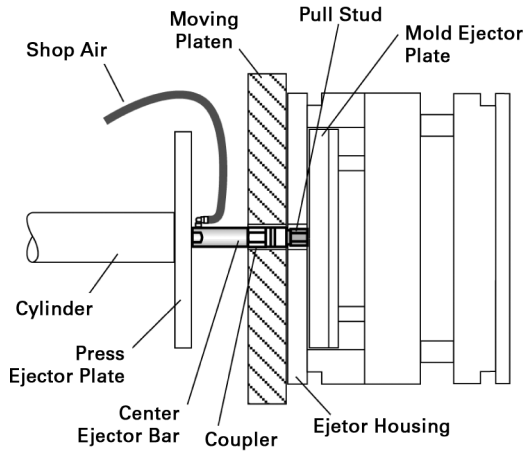
For example, a press with 4 knockout positions may be running molds using only the horizontal positions, but the next mold may need the 2 vertical knockout positions. Ejector housing shown is 1.062" thick. Air manifold supplies air to the mold side of the press ejector plate with the use of adapters.

Parts List

Qty	Part
2 or 4	FasTie Pull Stud
2 or 4	FasTie Coupler
2 or 4	Center Adapters
2 or 4	Fixed Length Ejector Bars or SpeedBar® Adjustable Length Bars
1	Air Manifold with tubing

FasTie®

Quick Ejector Tie-In System Installation Examples



For small presses with a center knockout, replace the cylinder bolt with a Center Knockout Bar and FasTie coupler.

Center Knockout Application - Coupler in Center Ejector Position

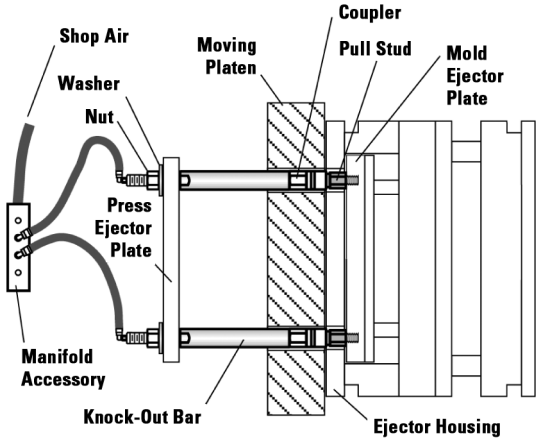
Center Bar and Coupler are installed into the press ejector plate. The pull stud is installed in the mold ejector plate. Molds are changed quickly without accessing the back of the press ejector plate. Ejector housing shown is 1.062" thick. Shop air is supplied to the side of the center adapter. No air manifold is needed. Fully-threaded Center Bar may be shortened to proper length on-site. In many small machines, there may not be room for an ejector bar.

Parts List

Qty	Part
1	FasTie Pull Stud
1	FasTie Coupler
1	Center Adapters

High Strength Couplers and Studs are recommended for 1" applications.

Animated Installation Examples appear on YouTube search for "burgerandbrowneng" or scan QR code



This setup is designed for captive molders, or shops with tools using a standard thickness ejector housing.

Captive Molder Applications - Couplers at the End of Ejector Bars

Couplers are located at the end of the knockout bars mounted to the press ejector plate. Pull studs are mounted to each mold in storage. Ejector connection is made without changing knockout bars. Ejector housing shown is 1.062" thick. Air manifold supplies compressed air to the end of each knockout bar for simultaneous coupler release. Fixed length bars are finished on-site, cut to length and tapped with ½-13 female thread.

Smartflow Blank Bars (fixed length) are threaded one end only to be cut to length and threaded on site.

SpeedBar Adjustable Length Bars may be manipulated without tools +/- .5" from nominal in increments of .006".

Parts List

Qty	Part

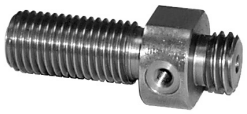
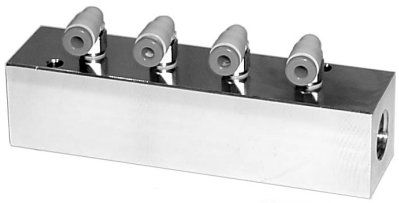
Fixed Length Ejector Bar

Center Ejector Bar

Center Adapter



Air Manifold



Accessories

Additional parts to aid installation and use:

- **Finished Bar Fixed Length Knockout** is a secure extension for a FasTie Pull Stud attached to the ejector plate in a Typical Application. Finished Bars are ordered to your specific length and thread size for seamless installation.
- **Blank Bar Fixed Length Knockout** provides an air passage for FasTie Coupler operation at the back of the press ejector plate in Captive Applications. Several lengths are stocked with one blank end for finishing (cut to length and thread).
- **SPEEDBAR Adjustable Length Knockout Bar*** changes length without tools ±1/2" in increments of .006". Air passes through the bar for air hook-up at the back of the press ejector plate, in Captive Applications.
- **Center Knockout Bar and Center Adapter** Provides an air passage in front of the press ejector plate for center knockout or alternate applications. Also for use with multiple knockouts.
- **Air Manifold** Splits single air supply into four circuits for simultaneous release of multiple FasTie Couplers. 1/8" diameter tubing and pneumatic connectors are included.

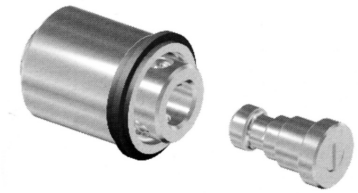
EJECTOR RETURN COUPLINGS

Ejector Return Couplings – General Information

Quick Action Ejector Return Couplings for Presses with Hydraulic Ejection



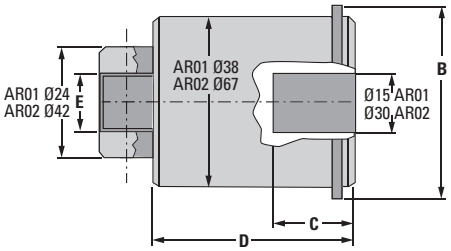
Economical

- Shortens mold changeover times
- Only one unit required per injection molding machine

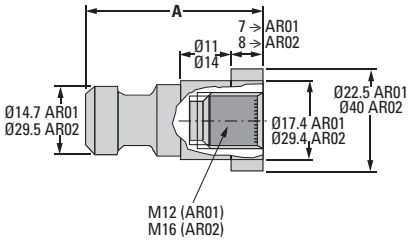
Universal

- Can be put into existing molds to save time and money
- Hydraulic return by means of fixed coupling
- Pulsating ejection possible

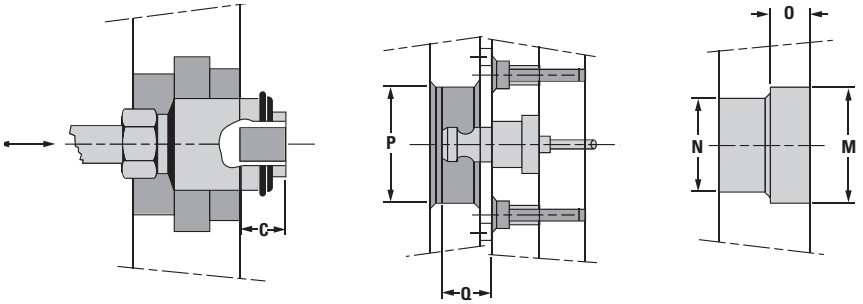
Quick return coupling (incl. connecting



Connecting plug



REF	TYPE
AR01 RESP. 02	QUICK RETURN COUPLING (INJECTION PRESS)
AR01 RESP. 02 P	CONNECTING PLUG (MOLD)



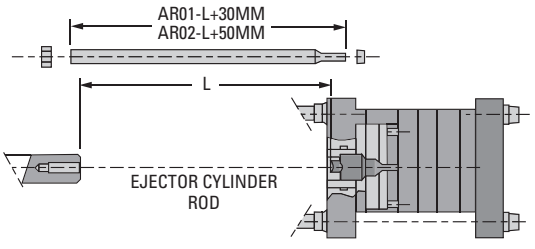
Ejector Return Couplings – AR

REF	A	B	C ±0.02	D	E	M	N	O +0.05 +0.02	P MIN.	Q MIN.	KN
AR01	38	43	18	43.5	M16	23	18	7	48	C +1	40
AR02	43	73	24	70.5	M20	42	32		80	C +1	140

Installation

1. Move the ejector plate to the molding position (mold closed).
2. Move also the ejector cylinder rod to the fully retracted position. It is important to check by hand, that the rod is fully pushed back to the fully retracted position before measuring.
3. Measure the distance between the coupling and the ejector cylinder rod.
4. Extend the ejector cylinder rod with an extra knock-out rod of the measured length + 30mm for AR01 and 50mm for AR02.
5. Move the mold ejector plates to the forward position (mold open).
6. Lock both the extra knock-out rod and at the other end the quick coupling.
7. Move the mold ejector plates back to the mold closed position and make the coupling between ejector plate and ejector cylinder rod. Make sure that the ejector plate and ejector cylinder rod are both in the mold closed position as soon as the coupling is made. If not, adjust.

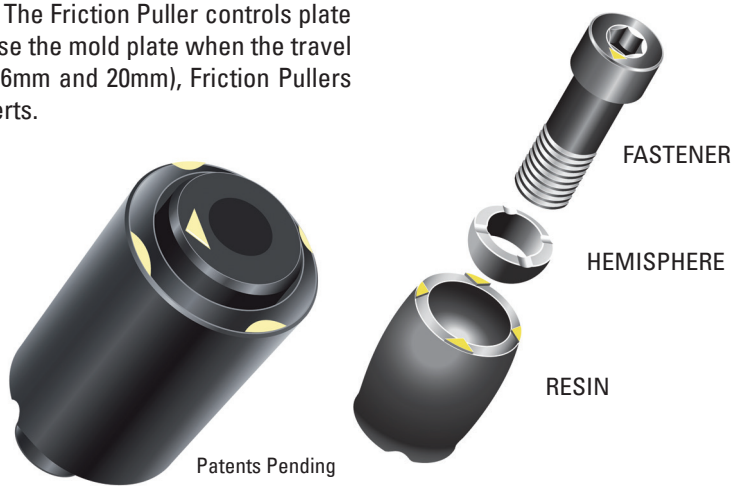
Do not use with quick-change mold systems.



FRICTION PULLERS

Friction Pullers – Advantages and Benefits

DME Friction Pullers provide optimal parting line control. The Friction Puller controls plate movement by using friction at a specified setting to release the mold plate when the travel limit is achieved. Available in four sizes (10mm, 13mm, 16mm and 20mm), Friction Pullers may be used to consistently draw floating plates and inserts.

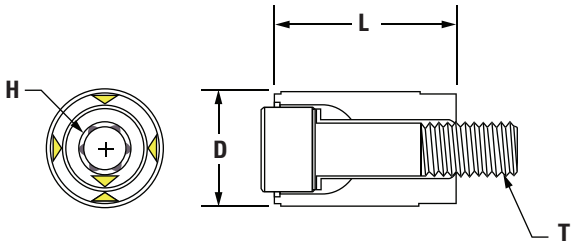


Friction Puller Advantages and Ben

- Reference arrows enable easy adjustment
- Self-locating even if plates shift due to thermal expansion or machining variances
- Internal self-venting eliminates the need for additional machining
- Fastener includes Nylok® patch for secure installation

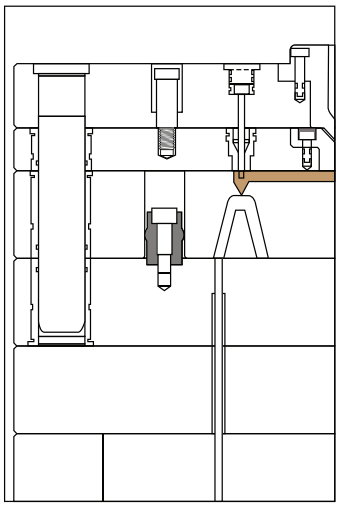
Technical Data

Material: Custom PPA Resin with 8620 fastener
Temperature: Maximum operating temperature - 300°F (150°C)
Removal: Before removing mold from the press for maintenance, rotate Friction Puller screw counter-clockwise with a ¾ turn to enable easy plate separation

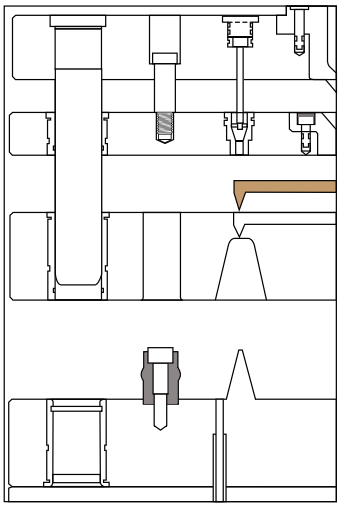


ITEM NUMBER	D	L	T	H HEX	HOLE DEPTH	MAXIMUM FORCE (EACH)
FP10D	10	17	M5-.8	3	20	32.5 KG (72 LBS)
FP13D	13	20	M6-1	4	23	62.5 KG (138 LBS)
FP16D	16	25	M8-1.25	5	30	150.0 KG (330 LBS)
FP20D	20	28	M10-1.5	6	32	212.5 KG (468 LBS)

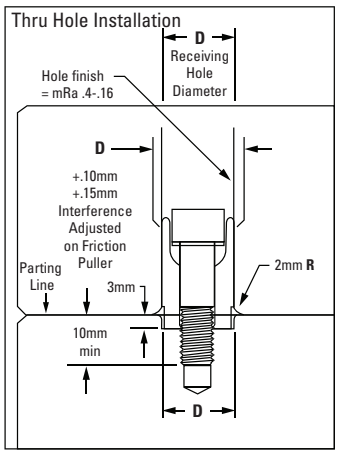
NOTE: Dimensions are in millimeters (mm).

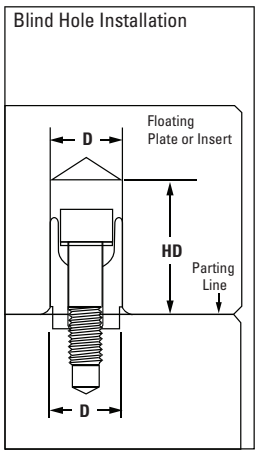


Mold Closed



Mold Open





NOTE: Recommended interference fit for Friction Pullers is .1 to .15mm larger than the receiving hole. To adjust, rotate the screw clockwise and measure bulge to achieve proper fit. Adjust further if necessary with ¼ turn increments, lining up the reference arrows on the fastener to the resin.

LIMIT SWITCHES

General Description

Thinswitch® Liquid-Resistant Limit Switch is designed to verify ejector plate return in areas where occasional water or oil spray is present. The Thinswitch helps prevent accidental mold close in injection molding applications by providing a position switch that is tied to the injection molding machine control. The liquid resistant switch uses the same mounting hole locations as the original Thinswitch.

The Thinswitch has been tested for reliability over 10 million cycles without failure. Two switches can be used in series for larger molds to ensure the ejector plate return, preventing costly mold damage.

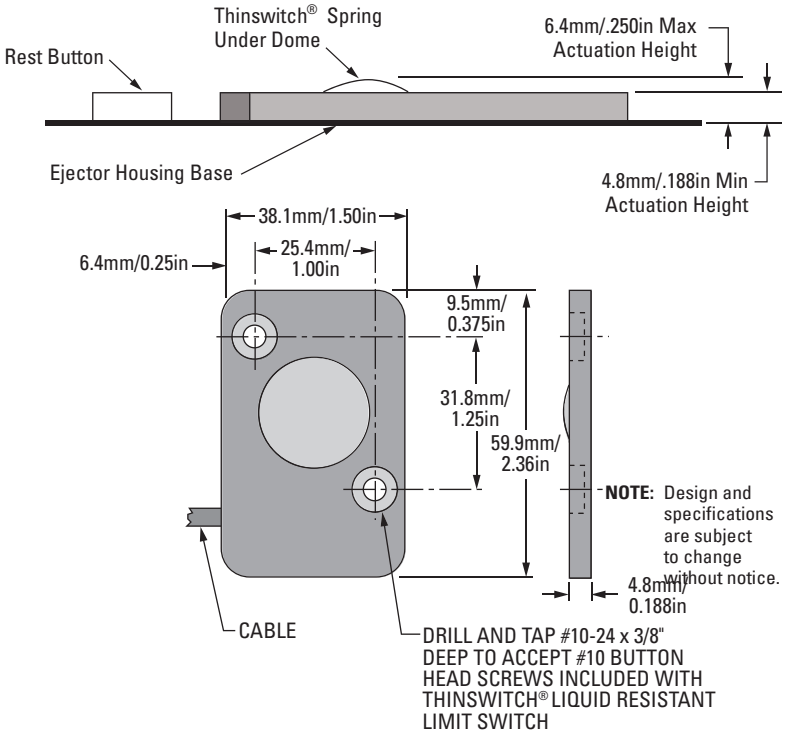
The Thinswitch® Limit Switch is designed for use in very low power mold protection control circuits. It is not intended to switch heavy loads in power applications.

RATED CURRENT (RESISTIVE) VS. OPERATING STEEL TEMPERATURE					
T222LR			HT291LR		
AMPS	°F	°C	AMPS	°F	°C
5.0	85	29.4	5.0	100	37.7
4.0	120	49.0	4.5	155	68.3
3.0	155	68.3	4.0	210	98.8
2.0	175	79.4	3.5	250	121.1

Features and Benefits

- **Over 10 million cycle life**
- 175°F (79.4°C) standard temperature rating
- 250°F (121°C) high-temperature unit for higher temperature needs
- Adjustable actuation between .187" and .250" from the mold base
- 3/16" thick design fits snugly behind the ejector plate between the rest buttons
- Stripped and tinned 6 ft. wire leads
- Mounting screws and wire clips included

NOTE: Premature spring and switch failure may result by adjusting the operating point more than .020" (.5mm) before the end of the ejector plate stroke.

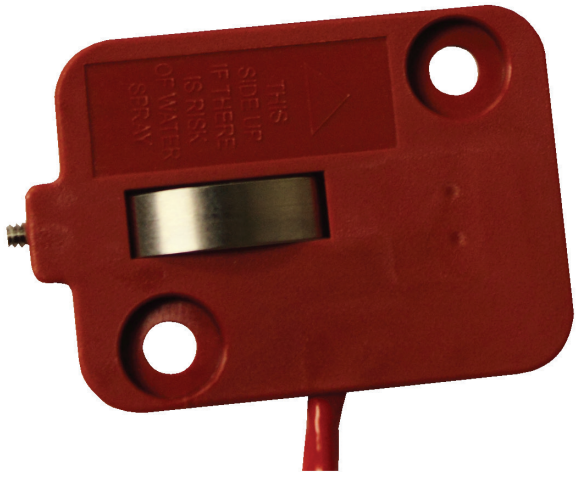


NOTE: Design and specifications are subject to change without notice.

LIMIT SWITCHES

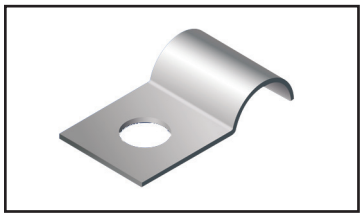
Thinswitch® Standard & High Temperature Limit Switches

lo. 5,446,252



STANDARD TEMPERATURE THINSWITCH TSW2220	
SP222A	REPLACEMENT SPRING
CT222A	REPLACEMENT CABLE TAB

HIGH TEMPERATURE THINSWITCH HT291



Thinswitch includes
2 cable tabs.

The Thinswitch® Limit Switch is specially designed to verify ejector plate return before permitting the mold to close in injection molding machines. Thin enough to fit inside the ejector housing, it can also be used for core slides, or any place space is limited.

The Thinswitch Limit Switch has been tested for reliability in more than 10 million cycles without failure. Two switches can be used in series for larger molds to ensure the ejector plate returns, preventing costly mold damage.

The Thinswitch Limit Switch is designed for use in very low power mold protection control circuits. It is not intended to switch heavy loads in power applications.

- Prevents costly damage by ensuring the ejector assembly is fully returned
- Adjustable operating point allows actuation between .187" and .250" from the base
- 3⁄16" thick design fits snugly behind the ejector plate in the space provided by the rest buttons
- Included mounting hardware installs the Thinswitch Limit Switch easily
- Stripped and tinned 6 ft. wire leads make the switch ready to install without modification
- 175°F (79.4°C) standard temperature rating enables use for most molding applications
- 250°F (121°C) high temperature unit is available for higher temperature needs
- **Quality tested over 10 million cycles to provide long, dependable service**
- Linear adjustment set screw can be set within .005 to .0025
- Premature spring and switch failure may result by adjusting the operating point more than .020" (.5mm) before the end of the ejector plate stroke
- In stock to provide same-day delivery

THINSWITCH LIMIT SWITCH Includes:

(1) Thinswitch Limit Switch
(1) 4-40 Allen Wrench (for height adjustment)
(4) Screws (#10-24 x 1/2" button head)
(2) Wire Clamps (.5" x .82" x .5" with .213" mounting hole)
(1) Instruction Sheet

LIMIT SWITCHES

Global Thinswitch® Limit Switch

- A limit switch specially designed for use in injection molds with 3mm and 4mm rest buttons to verify that the ejector plate assembly is fully returned before allowing a mold to close after part ejection
- Switch mounting is accomplished using integral mounting holes, or by using a special bracket (included) that allows the switch to slide into place from the edge of the mold base without disassembling the mold
- A polyurethane dome and wire seal protect the internal switch mechanism from water or oil contamination, providing a longer switch life
- Reliability for over 14 million cycles without failure
- Prevents expensive mold repair and maximizes uptime
- Suitable for use in environments up to 80°C
- SPST Switching action, with gold-plated internal contacts for reliable operation
- Comes with wire leads (28 gauge stranded) and 2-conductor shielded cables, 2m long

MOLD INTERLOCKS

LT-Series LifeTime Roller Side Mold Interlock

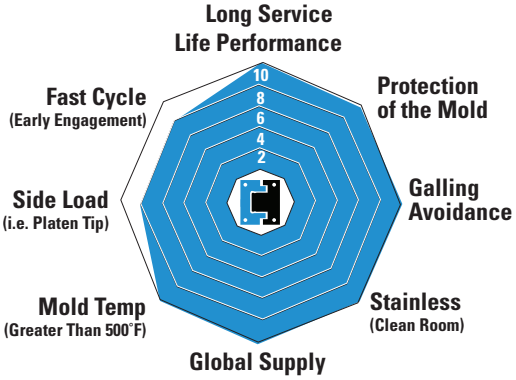
ALIGNING TOOLS IN DIFFERENT MOLDING APPLICATIONS

Alignment of the mold during the process is critical to the reliability and the achievement of high levels of O.E.E. (Overall Equipment Effectiveness), essential for a profitable molding process.

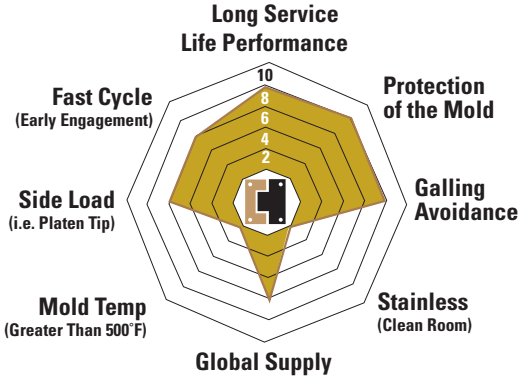
Tried and tested the newly designed and upgraded DME LifeTime lock addresses a gap in the Industry helping improve part quality, reduce cycle times and increase production uptime.

Designed for the best possible lifetime performance.

DME LT-Series LifeTime Roller Locks



Competitor Side Locks



CHALLENGES OF ALIGNMENT

Several factors can challenge alignment through the life time of the tool: thermal expansion, aged equipment, worn leader pins and bushings are just some of the variables.

HEAT VARIATION

Heat variations can cause misalignment of the mold over time. Managing temperature changes in stationary and movable mold halves is critical:

1. **Mold cooling, including the temperature differential between mold halves.**

   Steel grows approximately 0.0000065 inch for every degree Fahrenheit of temperature differential. When A and B halves vary by as little as 20˚F and the mold is 30 inches long, the difference in plate lengths is about 0.004 inch… enough to start wearing of the alignment components. To extend mold life, try to keep the all of the mold plates (mold halves) at a consistent temperature.

2. **Hot runner system heating.**

   Since these systems are driven by electric heaters, they can be a major contributor to mold temperature variations if proper cooling is overlooked.

3. **Insulator plates.**

   As production begins, insulator plates (top and bottom of the mold) will create a temporarily controlled closed environment. But any heat generated within the mold will eventually migrate through the insulating materials into the press platens and affect the alignment of the mold halves.

MOLD INTERLOCKS

LT-Series LifeTime Roller Side Mold Interlock

PARTING LINE ALIGNMENT

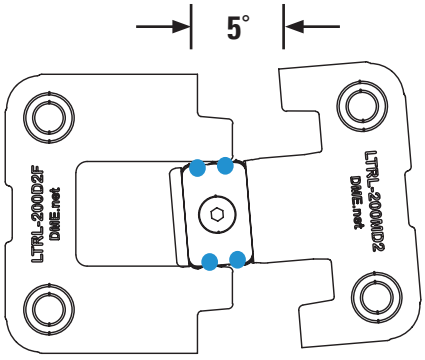
Improper mold alignment can cause dimensional problems, flash, damaged components, or even a mold that won't run anymore.

Initial Engagement

Interlocks must be able to allow for interference/angled engagement as the movable platen tends to lean forward and sag out of alignment due to mold weight and the toggle function. Also the cavity/core alignment is influenced by the quality/condition and location of guide pins and bushings, if these components are worn or out of place the alignment of the movable and stationary halves will be off.

DME LT-Series Side Locks

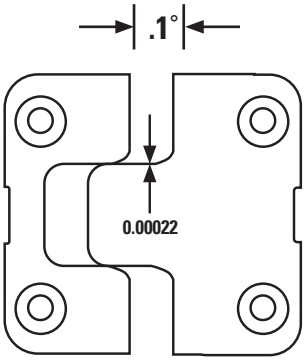
Five Degrees =
0.018" Interference Fit



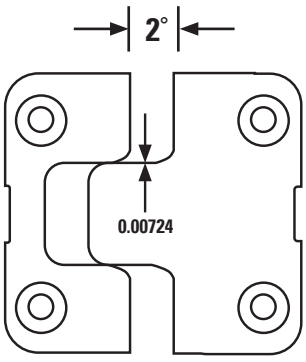
Tested to a 5° angle.

Standard Side Locks

One Tenth Degree =
0.00022" Interference Fit



Two Degrees =
0.00724" Interference Fit



Early Alignment for Precision Shutoffs

Interlocks align mold halves to protect precision tapered shut off inserts from being damaged. This is especially true with cross over telescoping cavity and core inserts.

Final Lockup Holding Strength

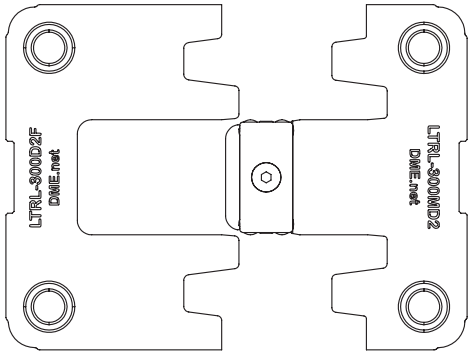
Interlocks provide constrains to counter the pressure produced during injection ensuring the A and B plate do not shift which results in a constant molded part thickness and matched parting lines.

MOLD INTERLOCKS

LT-Series LifeTime Roller Side Mold Interlock

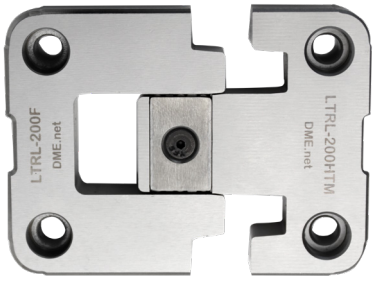
LT-Series LifeTime Locks 3"

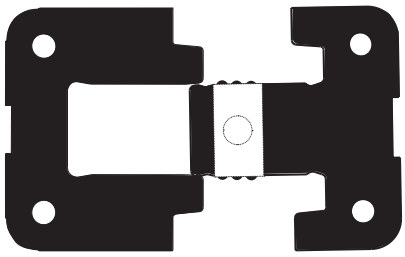
Penta-Lock Design



LT-Series LifeTime Locks 1-2"

Triple Lock Design





DME LT-Series
LIFETIME ROLLER LOCKS

THE BIG 3 REASONS

FOR LIFETIME LOCK SUCCESS

1. Carbide Rollers Can Reduce Or Eliminate Galling During Initial Engagement

Movable platen tends to lean forward and sag out of alignment because of mold weight and the toggle function

Carbide Roller Bearings

2. Early Alignment for Precision Shutoffs

Interlock aligns mold halves to protect precision tapered shut off inserts from being damaged. This is especially true with cross over telescoping inserts from one half to the other half

3. Triple & Penta-Locking Configurations (Patented)

Constrains counter-pressure of the injection to ensure constant molded part thickness and matched parting lines, resulting in the most precise location and holding power on final lock-up in the industry.

Patent No. US 6,981,858 B2
Patent No. US 6,558,145 B2

MOLD INTERLOCKS

LT-Series LifeTime Roller Side Mold Interlock

3 Superior Base Materials To Fit Your Application

Standard Life Lock: made of **D2** outperforming competition

High Heat Life Lock: made from **DC53**, 2X the strength of D2, builds on the Standard Life Lock but offers the Industry's first lock designed specifically to withstand the demands of high temperatures (750°F) processing applications. Today's locks often anneal and prematurely wear due to the higher heat.

Stainless Life Lock: made of **440C stainless-steel** locks have the same long lasting performance design features as our standard lock and have been developed to meet the requirements of clean room and packaging applications.

PERFORMANCE TESTED

Lab Testing

- Millions of Cycles
- Virtually No Wear
- Grease on rollers were still evident after 200,000 cycles

Field Production Testing

- Minimal wear after a million cycles or 14 months of fast cycle production
- No locks have seized or fractured
- Locks did not need position rotation

Benefits of DME's Patented Roller Lock

Precision Alignment Combining the Technology of:

- Straight
- Tapered
- Carbide Roller Bearing
- Made in 3 materials to fit your application needs.

Advantages

- Non-binding low friction alignment
- 30% earlier aligned engagement
- Final taper lock up strength
- Full Interchangeability male and female
- Retrofittable to industry standard foot-print, no additional machining required

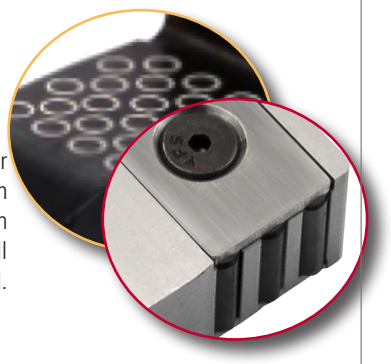
ALIGN YOUR PRIORITIES

WITH THE LIFETIME LOCK ADVANTAGE

3-POINT COMPARISON

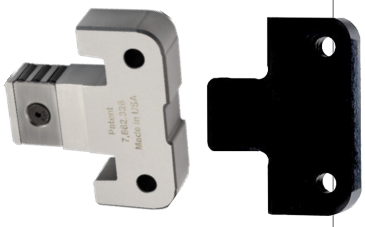
1

DME Carbide Roller Bearing glide into position vs. coated metal with debris catches that will wear and gall.



2

The LTL lock male section is elongated vs competitor locks allowing earlier engagement and larger miss-alignment angles without binding.



3

LTL design incorporates two additional locking features to ensure precise alignment vs. a single lock the competition offers.

Locks are coated with Slide® Mold Shield Rust Preventive part number 42910P. Prior to installation wipe lock down with Slide Mold Cleaner 46910 to removal all saver. Apply Slide Super grease part number 43900 (included) to each carbide rollers to ensure high performance and long life. Super Grease Operating Temps: -45°F - +650°F/-42°C and is Ideal for mold assemblies used in the food and medical markets. Contains PTFE, no silicones.

* NOTE: SS series includes Stainless Steel SHCS

MOLD INTERLOCKS

IN2 Side Interlocks

DME Side Interlocks provide:

- Accurate alignment of mold halves
- Easy installation
- Easy and cost-effective maintenance
- Industry-compatible sizes

Installation

- Install four (4) IN2 Side Interlocks per mold (one per side)
- Install IN2 Side Interlocks on the Center Line of each side of the mold
- Replace IN2 Interchangeable Inserts as desired

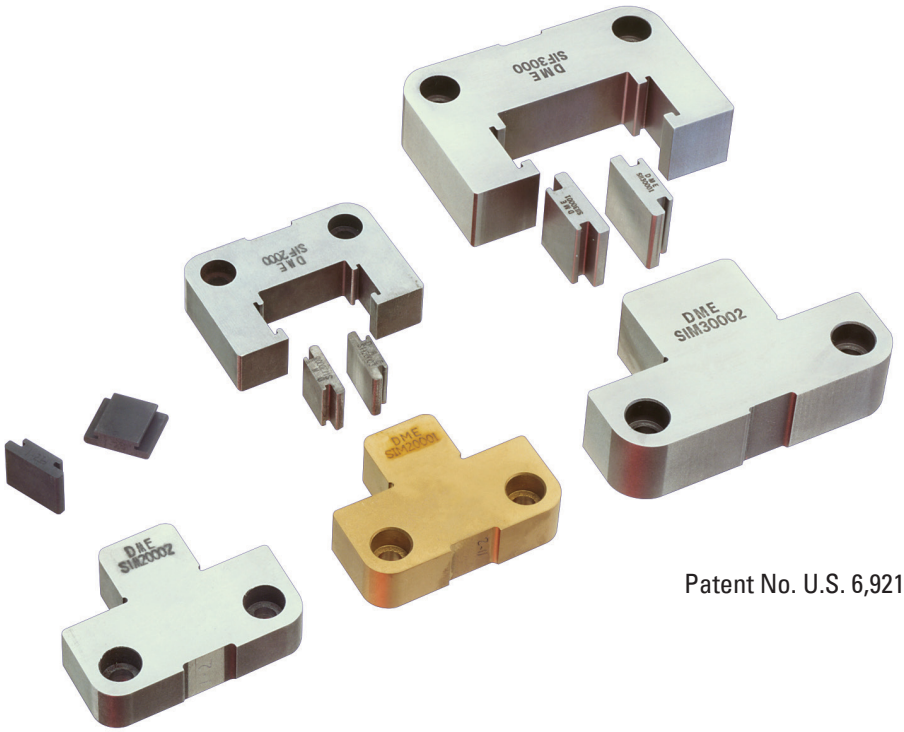
Precision tolerancing, precision manufacturing means off-the-shelf interchangeability

DME IN2™ Mold Interlocks are manufactured to exacting standards. Precise dimensional and geometrical tolerances ensure interchangeability. Interchangeability that no one else in the industry matches – **no one**. Precision tolerancing and manufacturing ensures that all DME IN2 Mold Interlock components are interchangeable – off-the-shelf. Replace any DME IN2 Mold Interlock component independently – no need to replace the entire set. **No one** else offers this level of interchangeability – no one.

The DME Standard of Interchangeable Interlock Components sets DME apart from the industry.

And now …

DME offers another innovation: **IN2 Innovative Interlocks with Interchangeable Inserts**. Interchangeable Inserts offer you simple, cost-effective maintenance. No need to replace the entire set when you use **IN2 Innovative Interlocks with Interchangeable Inserts**.



Patent No. U.S. 6,921,256 B2

MOLD INTERLOCKS

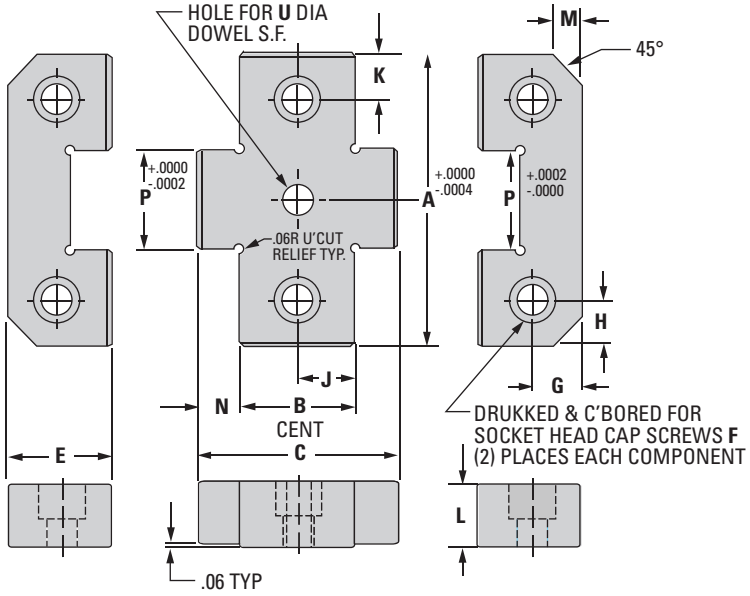
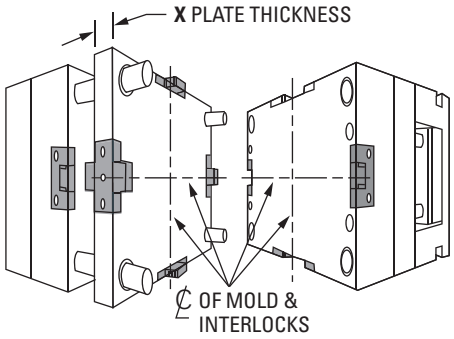
X-Style Straight-Side Interlocks

- Provides positive alignment between three adjacent plates when mold has two parting line openings, providing close alignment for interlock cavities and cores in stripper plate-type molds
- Used with AX-Series (floating plate) and X-Series (stripper plate) mold bases, as well as other mold bases with floating plates
- Interchangeable male PXM and female PLF details can be purchased individually





X-Style Straight-Side Interlocks – PLF, PXM

Material: AISI 8620 Steel-Carburized, Hardened and Ground **Hardness:** PXM: 50-55 HRC, PLF: 55-60 HRC

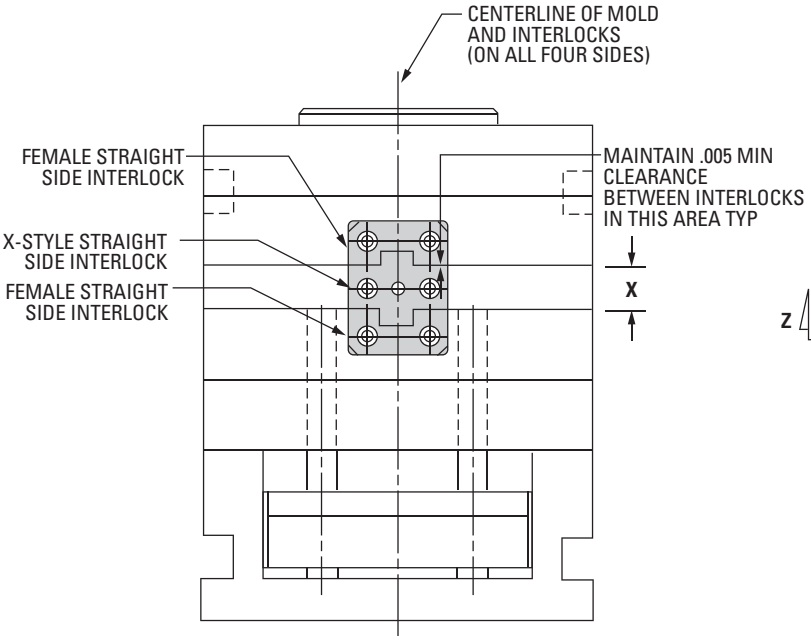
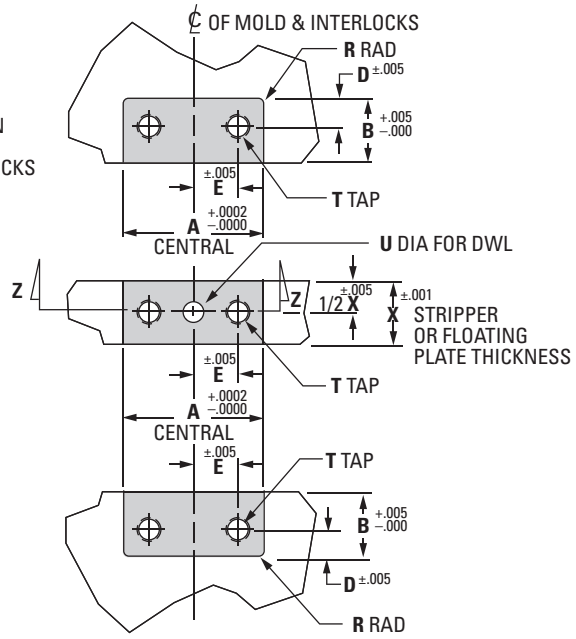
MOLD INTERLOCKS

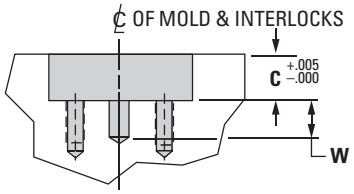
X-Style Straight-Side Interlocks

Basic Dimensions for Machining Pockets for X-Style and Female Interlocks on Centerlines of the Closed and Clamped Mold Assembly





VIEW OF POCKET ON CENTERLINE OF MOLD



The DME X-Style straight-side interlocks are designed for use on molds with floating plates when the two parting lines must be closely aligned with each other. The X-Style straight-side interlocks are designed to be used, and to mate with two of the equivalent size DME female straight-side interlocks. The X-Style interlocks are typically used on "X" and "AX" series mold bases, as well as other mold bases with floating plates.

Typical application is for use on a mold base with a stripper or floating plate. (4) X-Style interlocks and (8) female interlocks are used per mold assembly. One set is used on centerline of each end and one set on centerline of each side.

Moldmaker to adjust fit to suit as needed for specific application. Please contact DME for complete installation instructions for the X-Style Interlocks.

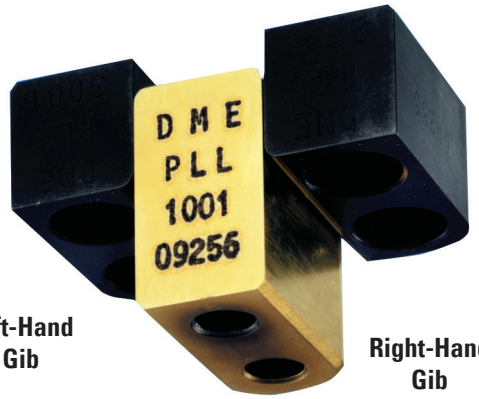
MOLD INTERLOCKS

Parting Line Interlocks



Left-Hand Gib

Right-Hand Gib

Center Male Interlock

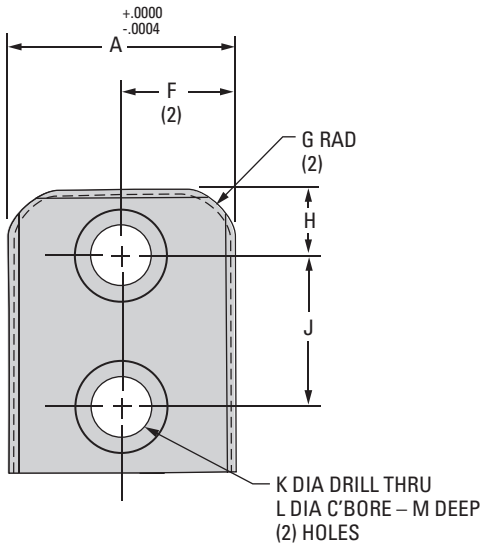
- For accurate alignment between mold halves
- All machining can be done from the parting line … saving set-up time and machining costs
- Components can be purchased individually

Typical Application

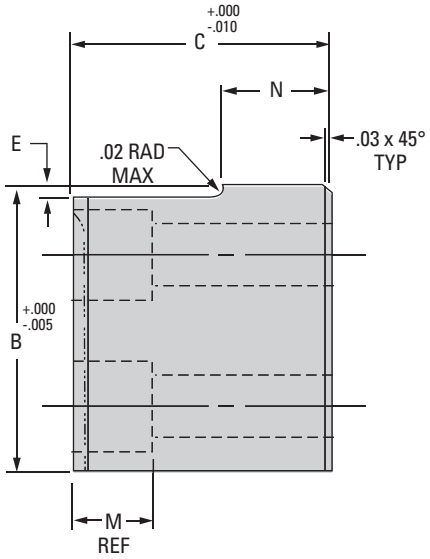
The male interlock is typically installed in the ejector half of the mold. Left- and right-hand gibs are typically installed in the stationary half of the mold.

Mold machining and installation data are available. Contact DME.

Center Male Interlock – PLL



CENTER MALE INTERLOCK



Material: S7 Steel, 52-58 HRC, Titanium Nitrided
80-85 HRC for wear and lubricity

ITEM NUMBER	A WIDTH	B LENGTH	C	E	F	G	H	J	K	L	M	N

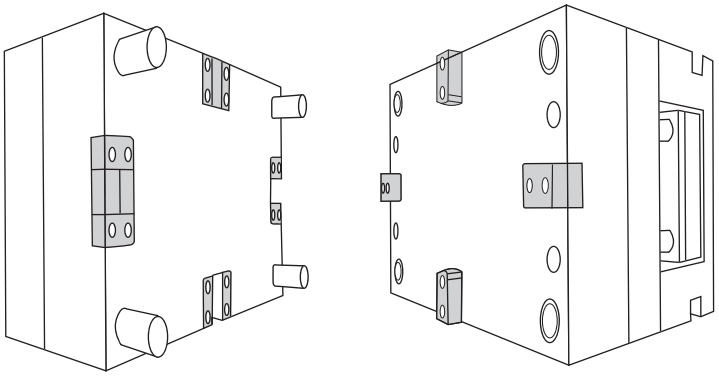
See next page for right- and left-hand gibs for parting line interlocks.

MOLD INTERLOCKS

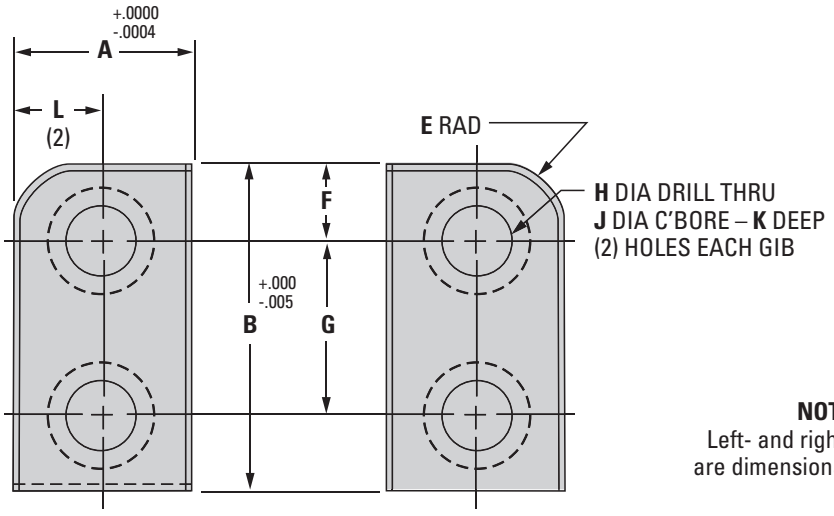
Parting Line Interlocks



NOTES:

1. Select center, right and left interlock components that are the same length (size) to make one set (e.g., PLL-1002, PLL-2002 and PLL-3002).
2. Four sets of interlocks should be used in each application. They must be installed on the center line of each side of the mold.
3. Each component includes two socket head cap screws.

Gibs (left and right) – PLL



LEFT-HAND GIB INTERLOCK

RIGHT-HAND GIB INTERLOCK

NOTE:
Left- and right-hand gibs are dimensionally identical.

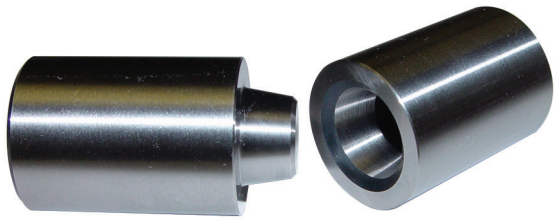
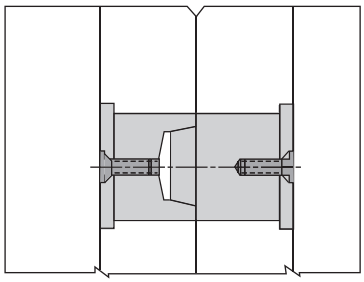
See previous page for center male parting line interlock.

MOLD INTERLOCKS

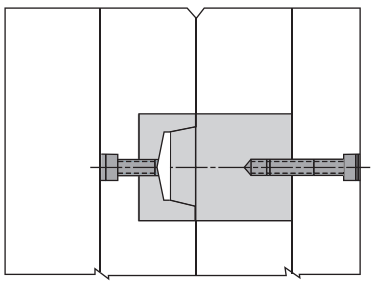
Tapered Interlocks (Round)



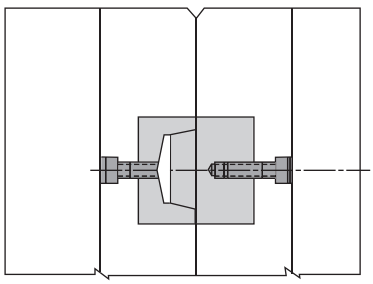
Through



Combination



Blind



DME Tapered Interlocks provide positive metal-to-metal mold registry to align mold halves, mold plates or individual cavities and cores. The larger sizes are generally used with large molds or plates. The ½ and ¾ sizes are generally used with small molds or to align cavities and cores. At least two sets are recommended for small molds or inserts, four for medium-size molds and six or more for large molds.

To obtain accurate registry, the installation holes or pockets must be accurately aligned. For this reason, through construction is recommended because the two plates can be clamped together and line-bored. Combination construction can also be line-bored or at least partially line-bored to create a pilot for the blind pocket. Blind pocket construction in both plates is the most difficult installation. Close attention is required to make certain the two pockets line up.

The tapered interlocks are **intended to seat on the taper, NOT the face** of the interlock. This provides positive alignment without the need for the face of the male and female to touch. There could be a gap 0.005" or larger between the faces of the interlock in mold closed position.

There is stock allowance at the back of BOTH male and female details to permit fitting at assembly to match specific mold plate thicknesses and/or pocket depths.

MOLD INTERLOCKS

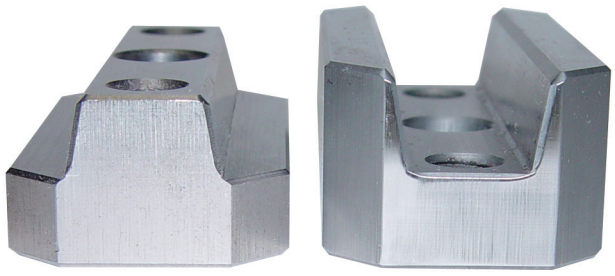
Tapered Interlocks (Rectangular)



DME Standard Rectangular Tapered Interlocks provide positive, metal-to-metal alignment between mold or die halves, between plates or between individual cavities and cores. These Tapered Interlocks will maintain proper alignment while permitting thermal expansion between the mold or die halves. Mating sets are mounted in-line and/or perpendicular to one another (never parallel).

DME Rectangular Tapered Interlocks are made of shock-resisting S-7 tool steel, and are hardened and ground to precision tolerances, which permit interchangeability.

NOTE: Male and female lengths must match.

Installation Guidelines

Each mounting pocket must be accurately aligned with the pocket for the mating interlock in the other half of the mold or die. The width of each pocket serves as a precision keyway to maintain the steadfast position of each interlock.

Each pocket must be flat and parallel to the parting line. The mating interlocks should be fitted with a slight preload to ensure metal-to-metal engagement.

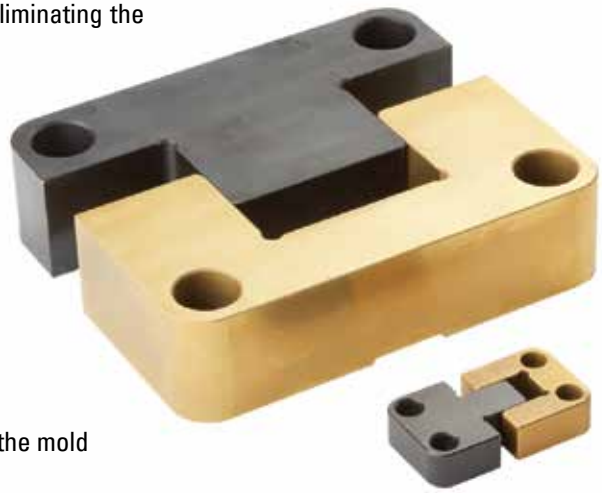
The pocket lengths should be long enough to provide clearance.

MOLD INTERLOCKS

Black and Gold Side Interlocks

Industry-Leading Interchangeability

Thanks to precision manufacturing and precision tolerancing, every DME mold interlock component can be replaced independently, eliminating the need to swap out an entire set.



DME Side Interlocks provide:

- Accurate alignment of mold halves
- Easy installation
- Industry-compatible sizes

Installation

- Install four (4) Side Interlocks per mold (one per side)
- Install Side Interlocks on the Center Line of each side of the mold

MOLD INTERLOCKS

Black and Gold Top Interlocks

DME Top Interlocks provide:

- Accurate alignment of mold halves
- Easy installation
- Industry-compatible sizes

Installation

- Install four (4) Top Interlocks per mold (one per side)
- Install Top Interlocks on the Center Line of each side of the mold

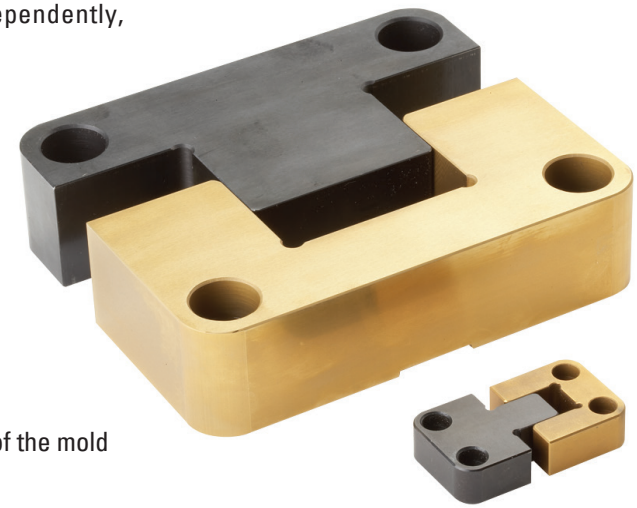
MOLD INTERLOCKS

Black and Gold Side Interlocks – Metric

Industry-Leading Interchangeability

Thanks to precision manufacturing and precision tolerancing, every DME mold interlock component can be replaced independently, eliminating the need to swap out an entire set.

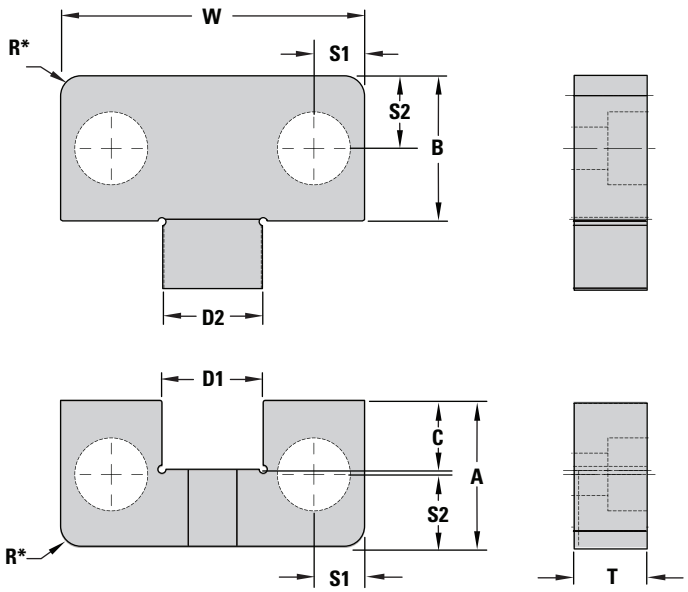


DME Side Interlocks provide:

- Accurate alignment of mold halves
- Easy installation
- Industry-compatible sizes

Installation

- Install four (4) Side Interlocks per mold (one per side)
- Install Side Interlocks on the Center Line of each side of the mold



* Part radius "R" is 1.00mm larger than recommended pocket radius.

Black and Gold Side Interlocks – BGS

PROWELD

ROHS/WEEE COMPLIANT MICRO-WELDING SYSTEM FOR PRECISION MOLD REPAIR

ProWeld Micro-Welding System

As an essential resource to thousands of customers around the globe, DME is diligent in making certain its products are compatible in every region of the world. That's why every component within the ProWeld system satisfies all international compliances. This included RoHS (Restriction of Hazardous Substances) that prohibits or restricts the use of six potentially harmful materials in electronic equipment, and WEEE (Waste Electrical and Electronic Equipment) that requires equipment made after August 2005 to be returned to the manufacturer and recycled, rather than just "thrown away."

SPECIFICATIONS	
Consumable Power	600 VA
Output Voltage	0 – 9V
Control System	SCR Switching System
Dimensions (inches)	W6.5 x D17.75 x H16

Standard Equipment

Complete ProWeld system includes:

ITEM NUMBER	DESCRIPTION
UMW0001	Power pack with welding cord, grounding cord and plate,power cord, foot switch and all accessories listed below
P-501	Weld Cord
P-502	Ground Cord
UMW0002	N51–Standard SKH-51 steel powder (40 grams) (63 Rc; for D-2/M-2/S-7 steels)
UMW0003	N80–Standard NAK80 steel powder (40 grams) (38-40 Rc; for P-20/P-21 steels)
UMW0004	NAK80–Standard steel sheet 10 sheets, 0.1T x 5W x 100L) (38-40 Rc; for P-20/P-21 steels)
UMW0005	NTA1–Ni Alloy sheet (10 sheets, 0.1T x 30W x 70L) (135HV; for all steels)
UMW0006	NTA2–Ni Alloy sheet (10 sheets, 0.2T x 30W x 70L) (135HV; for all steels)
UMW0009	Magnet electrode (2 dia. x 50L)
UMW0010	Magnet electrode (3 dia. x 50L)
UMW0011	Magnet electrode (4 dia. x 60L)
UMW0012	Magnet electrode (4 dia. x 50L)

ITEM NUMBER	DESCRIPTION
UMW0013	Standard electrode (2 dia. x 50L)
UMW0014	Standard electrode (3 dia. x 50L)
UMW0015	Standard electrode (4 dia. x 50L)
UMW0016	Standard electrode (1.2T x 5W x 35L)
UMW0017	Standard electrode holder (black) (used with UMW0015)
UMW0018	Magnet electrode holder (brown) (used with UMW0011 and UMW0012)
UMW0019	Standard electrode holder (black) (used with UMW0016)
UMW0020	Standard electrode holder (black) (used with UMW0013)
UMW0021	Standard electrode holder (black) (used with UMW0014)
UMW0022	Magnet electrode holder (brown) (used with UMW0009 and UMW0010)

NOTE: Contact DME for replacement parts and additional welding materials.

CAVITY AND CORE COMPONENTS

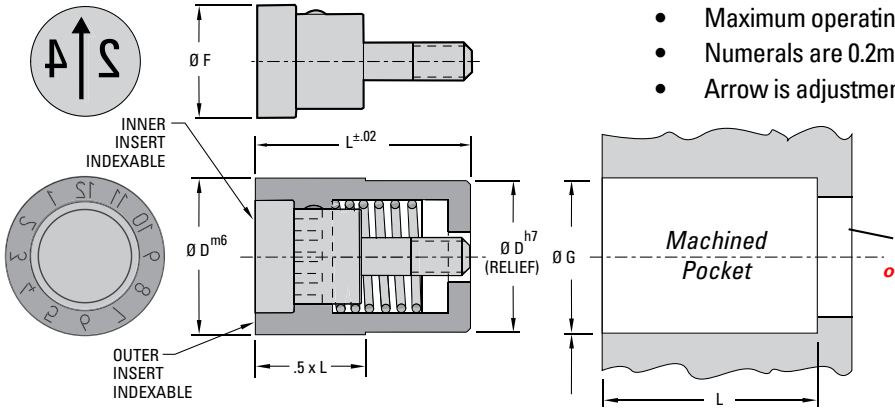
Indexable and Front Removable Mold Dating Inserts

Indexable Inserts

U.S. Patent No. 5,788,872



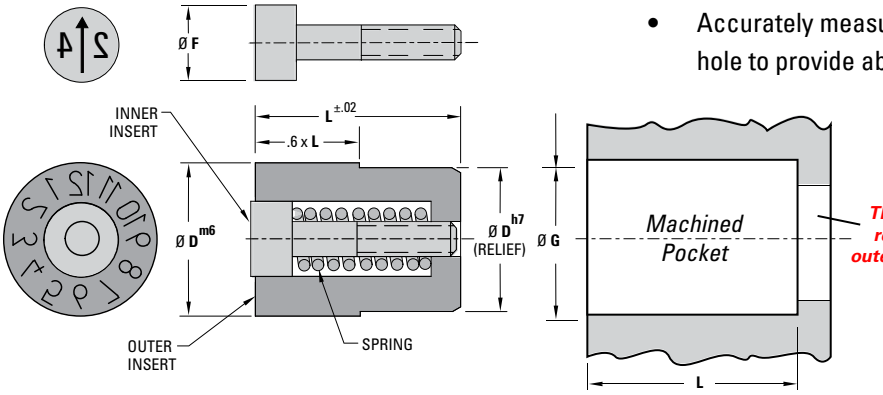
- Relief on bottom of insert will align insert into hole.
- An aluminum rod should be placed against the face of the insert with the rod larger in diameter than the Outer Insert. The aluminum rod should be tapped with a hammer to move the insert to its flush position.
- Inner insert must be flush or below flush during installation.

NOTE: Indexable springs are built in.

Features of Indexable and Front Removable Inserts

- Designed for plastics injection molds
- Maximum operating temperature is 150°C (300°F)
- Numerals are 0.2mm deep and arrow is 0.4mm deep
- Arrow is adjustment slot

Front Removable Inserts



- Relief on bottom of insert will align insert into hole.
- An aluminum rod should be placed against the face of the insert with the rod larger in diameter than the Outer Insert. The aluminum rod should be tapped with a hammer to move the insert to its flush position.
- Inner insert must be flush or below flush during installation.

Installation and Machining for Both Insert Styles

- Press-fit installation required
- Maintain a close tolerance press fit. Too loose a fit could allow the insert to move out of position, while too tight a press fit might prevent the inner insert from rotating when required
- Accurately measure the Ø **D** for each part and machine Ø **G** hole to provide about 0.005mm (.0002") press fit

INFORMATION KEY:

D = Outside Diameter of Outer Insert

F = Outside Diameter of Inner Insert

G = Hole Diameter

L = Length

Material: Stainless Steel

Hardness: 50-55 HRC

Max. Temp: 150°C (300°F)

Dimensions: All dimensions are in mm, except as noted

CAVITY AND CORE COMPONENTS

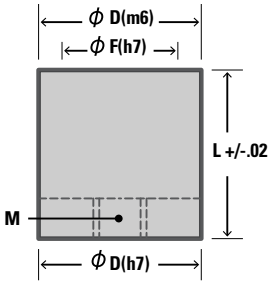
Mold Dating Inserts Hi-Temperature/Blind Hole

Features of Hi-Temperature Mold Date Inserts

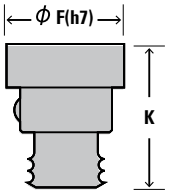
- Withstands temperatures up to 644°F (340°C)
- Designed to be easily removed from cavity plate with a metric screw, no need for a thru-hole
- Newly engineered inner insert is removed with less rotations due to shorter threads
- Inner inserts use ball detents to click into position

Dimensions and Tolerances of High-Temperature Inserts

OUTER INSERT



INNER INSERT



Material: Stainless Steel
Hardness: 50-55 HRC
Max. Temp: 340°C (644°F)
Dimensions: All dimensions are in mm, except as noted

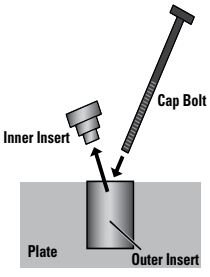
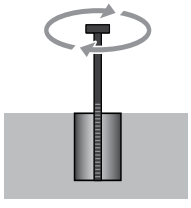
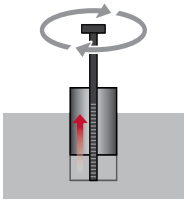
Removing Hi-Temperature Inserts



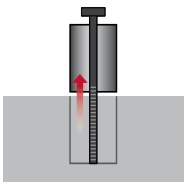
Remove the inside insert. Insert cap bolt into outer insert hole.



Turn the cap bolt clockwise into the outer inserts under threads.



Continue turning the cap bolt clockwise raising the outer insert up from the plate.



Remove the outer insert from the plate when it has cleared the hole.

Dual-Ring Mold Dating Insert

Dual-Ring Mold Dating Insert Offers the Ultimate in Date Insert Flexibility

Patented Indexable Mold Date Insert Technology

The Dual-Ring Mold Dating Insert from DME features a date insert valid for six years and is based on Indexable Mold Date Insert technology.

The Dual-Ring Insert eliminates the need to install two date inserts or change the inner insert each year. This easy-to-use indexable insert provides the flexibility you need to keep your mold dating current, especially as the lifetime of molds becomes shorter.

- Outer ring: 12 months, months 1 through 12
- Inner ring: 6 years + arrow (arrow points to month)
- Center insert: arrow (points to year & adjusts position of both arrows)

Features and Benefits

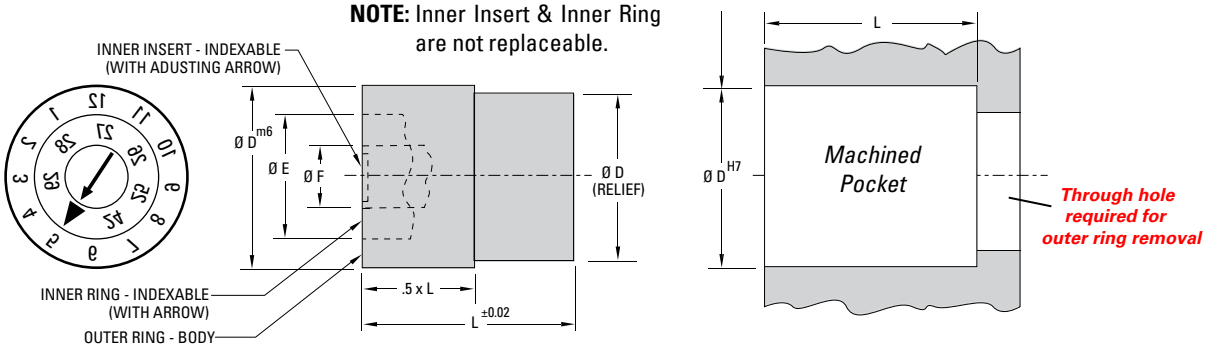
- Double indexable: both arrows independently "click into position"
- Change positions easily with only a screwdriver using arrow in inner insert
  - Turn clockwise to change "year" arrow (6 years)
  - Turn counter-clockwise to change "month" arrow (12 months)
- All inserts remain flush when rotated
- Dual-Ring Inserts may be interchanged for the 20mm, 16mm, 10mm, 8mm to 6mm diameter Indexable and Front Removable inserts

Patent Pending

Installation and Machining

- Press-fit installation required
- Maintain a close tolerance press fit. Too loose a fit could allow the insert to move out of position, while too tight a press fit might prevent the inner insert and inner ring from rotating when required
- Accurately measure the Ø **D** for each part and machine hole to provide about 0.005mm (.0002") press fit

Pocket for installation
(hold pocket depth as required by the application)



Ø D	TOLERANCE	
	m6	h7
6	+0.004 TO +0.012	0.000 TO -0.012
8	+0.006 TO +0.015	0.000 TO -0.015

CAVITY AND CORE COMPONENTS

Mold Dating Inserts Blind-Hole Applications

- Patented mold date insert design
- Installs with insert's captured screw in to the mold plate
- Thru hole not necessary for removal
- Changes and maintenance done with mold in the press
- Available in 6mm, 10mm and 16mm diameters (others via special order)
- Compatible with standard Indexable DME inner inserts

CAVITY AND CORE COMPONENTS

Remote Inserts

Avoid lost production time with DME's external traceability system. This system allows the operator to change the data points from the outside of the mold saving valuable production time. Our traceability system consists of a control box for each insert that is mounted on the outside of the mold allowing for on the fly changes to insert. These control boxes drive a cable directly to the insert providing a reliable and consistently method to change the data points in the quickest possible manor.

Features & Benefits

- External visibility of date stamp setting
- Eliminates possible scratches to the cavity during stamp updating
- Included nut allows easy height adjustment to get the perfect visual appearance on the part

CONNECT

ADD DIGITAL CONNECTIVITY DIRECTLY TO YOUR PRODUCT

DME's NEW QR Code Insert is a game changer.
The two-dimensional QR code is customized to your unique code, allowing your customer access to your very latest product information via smart phone or other smart devices.

For the first time, QR codes can be added to the product during the molding process without making it part of the mold. Advantages of the new DME QR Code Insert:

1. Discrete, Permanently Affixed, Won't Wear Off
2. Easy To Use Marking/Tracking Option
3. Cost-Effective; Requiring No Secondary Operations
4. Inserts Can Be Easily Replaced And Updated

CAVITY AND CORE COMPONENTS

QR Code Insert

A MARKETING & OPERATIONS DREAM TOOL

The new DME QR Code Insert allows OEM's to reap all the benefits of traceability and consumer connectivity. Adding a QR code to a product isn't a new concept, but up until now it could only be printed on the product or disposable item such as support material. Today there is a new and better solution. With the NEW DME QR Insert you can now add a QR code directly to a product itself, in a way that won't be removable or wear off. The NEW DME QR Insert has unlimited possibilities to provide your customer more information about your product, options for re-order, documentation, and optional accessories. QR codes can be used for many things, but often are set as online destinations or content. You can tailor a video, custom marketing or informational message to your customers by sending them to online information that you control. Unlike printed materials, online content can be edited and updated as needed to maximize the effectiveness of the content. Build your email list by routing your customers to a sign-up page or potentially reduce liability by giving them instructional information and/or warnings. The possibilities are endless - all from one little insert!

Advantages of Connecting:

- Quick, error-free link to your online content.
- Engage the customer with videos and other updated information.
- Provide a link to promotions and interactive sites to obtain Voice of the Customer (VOC) information.
- Smart phones and tablets have easy access to QR reading apps across all platforms.

CAVITY AND CORE COMPONENTS

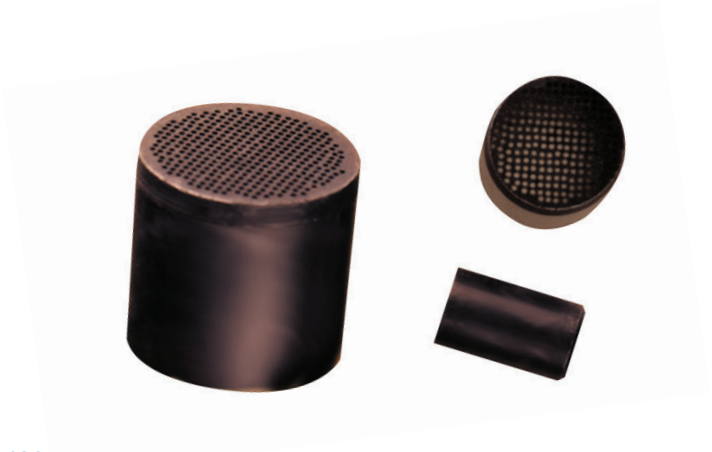
Sintered Vents – For Plastics Injection Molding

Features and Benefits of Sintered Vents – USV

- Venting of air or gas reduces occurrence of short shots and burned parts
- Self-contained standardized vents save time in design, installation and maintenance
- Wide variety of off-the-shelf standard sizes available
- Fast and easy replacement or cleaning of sintered vents improves productivity
- Field tested to ensure product reliability



Sintered Vents

Sintered vents are a unique venting plug composed of a large number of straight, parallel and uniform pores made through a powdered metallurgy process. The pores allow trapped air or gas to escape from the mold cavity during the injection molding process, thereby reducing the occurrence of defective parts.

Application Recommendations Plastics injection molding

A 0.03mm vent diameter should be used with polymers such as polyethylene or polypropylene. Use a vent with a pore diameter of 0.05mm for low-flow polymers such as polycarbonate, nylon, or ABS. When molding highly viscous material (very low-flow properties), use a vent with a 0.10mm pore diameter.

Stainless Steel sintered vents are recommended for plastic materials that are particularly gaseous or corrosive, such as PVC. Stainless Steel sintered vents are also recommended for plastic materials containing flame-retardants.

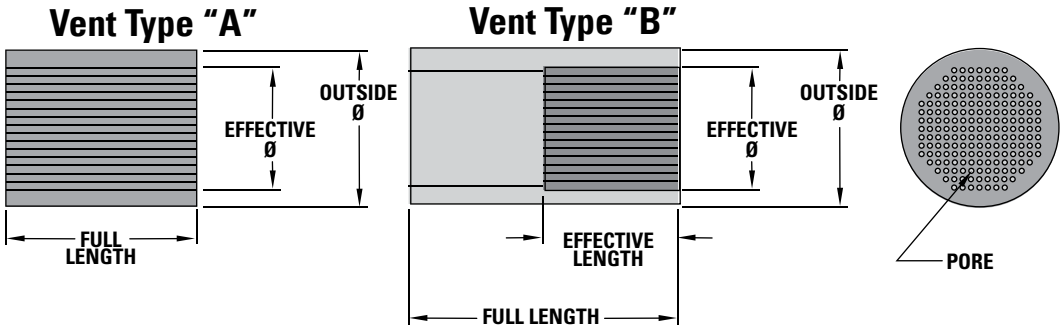
CAVITY AND CORE COMPONENTS

Sintered Vents – For Gravity & Low-Pressure Diecasting



Installation Information for All Sintered Vents

- The recommended press-fit is 0.01 to 0.02mm for outside diameters of 10mm or less, and 0.015mm to 0.035mm for outside diameters over 10mm
- Use a plastic or wooden hammer for installation. Do not tap the pore surface of the sintered vent with a metallic or hard tool. The use of hard tools will result in clogging or chipping of the vents
- Do not grind, machine, or cut the pore surfaces

Ultrasonic Cleaning

- Use ultrasonic cleaning to periodically clean pores in the sintered vents, as required

CAVITY AND CORE COMPONENTS

Vortex® Core Pins and Plugs

Vortex®

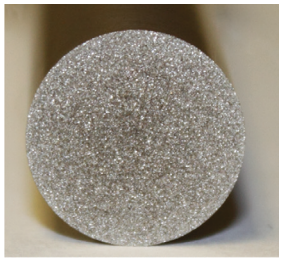
Vortex Core Pins and Plugs are made from a porous, sintered metal with a porosity of 25% air by volume. With a series of interconnected pores averaging a diameter of 7 (.0003") microns throughout the material. Using Vortex® in appropriate areas **eliminates gas buildup, reduces injection pressure, lowers cycle times, gloss levels and substantially reduces scrap and reject rates**.

Vortex Pins and Plugs provide a location-specific method of venting gas. Due to its porosity volume, one fourth of the surface becomes a vent.

Vortex Benefits:

- **Tool Simplification**
- **Prevents Burning**
- **Eliminates Shrink & Short Shots**
- **Aids in Part Ejection**
- **Enhances Part Appearance**
- **Reduces Gloss & Cycle Time**
- **Prevention of Knit Lines**
- **Melt Delivery Simplification**

Vortex Pins & Plugs



- Pins are 3" long and are available in diameters of .250", .375" and .500"
- Plugs are offered in .250", .500" and 1.00" lengths in diameters of .250" and .375"
- Heat treated to 43 HRC
- Tensile strength: 74,000 lbs./sq.in.
- Thermal Linear Expansion Coefficient: (at 68˚F - 302˚F) 6.67-6.94 E-06 in./in./F˚
- Porosity: 25% air by volume
- Heat transfer co-efficient (at room temperature): 16.93–19.35 BTU/ft. hr. F˚

CAVITY AND CORE COMPONENTS

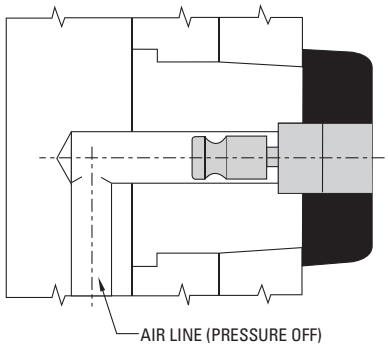
Air Poppet Valves – Applications

Air Poppet Valves – VA
Features and Benefits

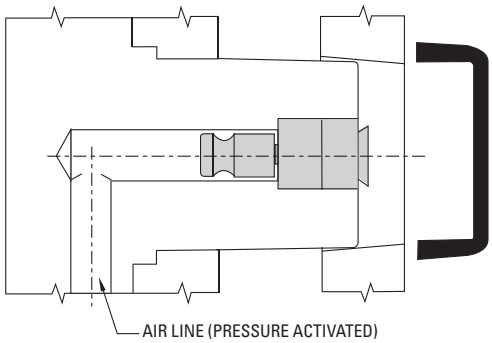
- Prevents mold damage due to ejection problems with deep-draw or thin-walled parts
- More durable and precision-made than competitive units

These precision-engineered valves are designed to remedy the vacuum problem often encountered during the molding of deep-draw (e.g., buckets) or thin-walled parts. Air flow, timed to coincide with the ejection cycle, opens the valve to break the vacuum and facilitate part ejection. A precision-ground valve seat helps prevent flash from entering the assembly during injection. Each valve is matched to the body to further assure reliable performance.

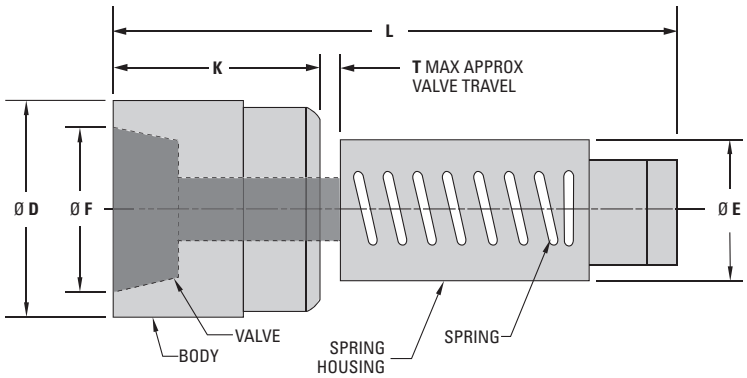
Typical Application

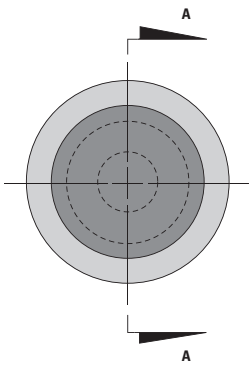


Mold Closed



Mold Open





INFORMATION KEY:
D = Outside Diameter
E = Housing Diameter
F = Approx. Valve Diameter
G = Hole Diameter
H = Hole Depth
K = Body Length
L = Overall Length
N = Depth
T = Max Valve Travel

Body Material: Stainless Steel
Body Hardness: 52-54 HRC
Valve Material: DIN 1.2516
Valve Surface Treatment: DLC (diamond like coating)
Max. Temp: 120°C (250°F)
Operating Air Pressure: 58 PSI min. 87 PSI max
Dimensions: All dimensions are in mm

ITEM NUMBER	Ø G	N DEPTH	Ø H	R	L REF
VA01D	8	11	6.75	0.1	24
VA02D	12	18	9	0.2	34
VA03D	18	22	14	0.3	45.5

All dimensions shown are in millimeters (mm).

Installation Information

- Press-fit installation required
- Maintain a close tolerance press fit, as specified. Too loose a fit could allow the Air Poppet Valve to move out of position, while too tight a press fit could interfere with the movement of the valve

NOTES:

1. Pressure to air line of Air Poppet Valve and machine ejection should be activated at the same time. This allows valve to relieve negative pressure build-up (vacuum) in the cavity during part ejection.
2. The air flow to the poppet valve must be fully relieved to the atmosphere after each cycle to ensure that the poppet valve closes before the next injection cycle. Material injected into a partially open poppet valve could cause damage to the valve and/or the mold. Control valves and limit switches to be supplied by moldmaker and/or molder.
3. The Air Poppet Valve should never be used as the sole means of part ejection. Material shrinkage and other factors will not allow it to be used as an alternative to ejector pins or stripper plates.
4. Do not position Air Poppet Valve directly under hot drop.

CAVITY AND CORE COMPONENTS

Runner Shut-Off Inserts – Applications

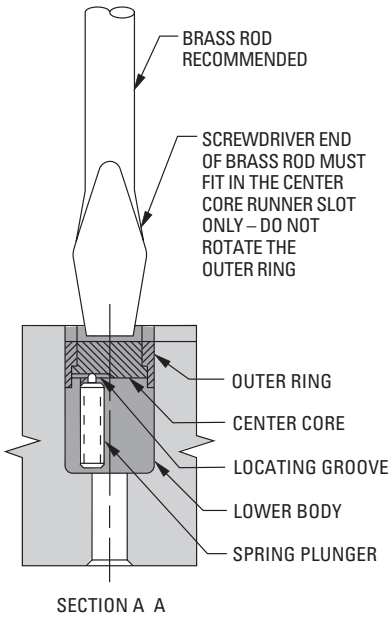
U.S. Patent No. 5,208,053

DME Runner Shut-Off Inserts provide a precise method of blocking or directing material flow to one or more cavities in multi-cavity or family molds.

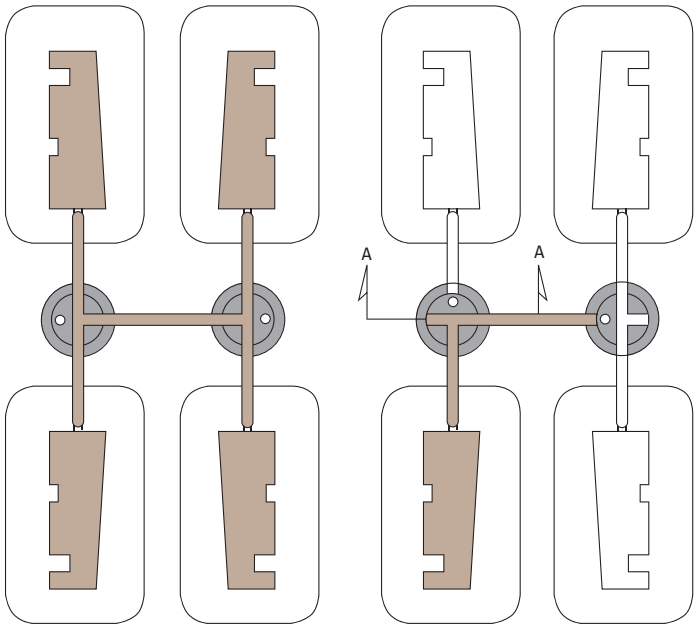
- Safer and more positive than the use of brass or ejector pins
- Saves material
- Reduces scrap and sorting
- Improves cycle time

Inserts are supplied unmachined as shown in background of photo. Foreground shows sample runner machining, typically done with insert installed in mold.

Typical Applications



NOTE: Spring plunger in Runner Shut-Off Insert engages a locating groove in the center core. This holds the center core in position at each 90° rotation of the center core, thus providing several combinations of runner shut-off positions.



Runner Shut-Off Inserts are shown above in the open position, which allows material to flow to all cavities.

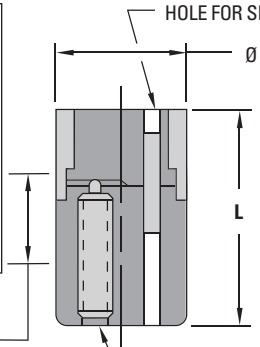
By rotating the center core of the Runner Shut-Off Insert 90° or 180° with the screwdriver end of a brass rod, material flow to one or several cavities can be shut off, as shown above.

Runner Shut-Off Inserts – MRS

ITEM NUMBER	Ø D	L LENGTH
MRS 0013	.5118 (13MM)	.885 (22.5MM)
MRS 0016	.6299 (16MM)	.885 (22.5MM)
MRS 0026	1.0236 (26MM)	1.260 (32MM)

All dimensions are in inches except for several parenthetical reference dimensions in millimeters.

INFORMATION KEY:
C = Depth of Runner
D = Diameter
L = Length
R = Radius
W = Width of Runner
Material: Stainless Steel
Hardness: 50 ± 3 HRC
Max. Temp: 120°C (250°F)
Dimensions: All dimensions are in inches, except as noted



‹MEASURE Ø **D** IN THIS AREA ONLY. TOP AND BOTTOM OF INSERT HAVE A VERY SLIGHT RELIEF FOR PROPER INSTALLATION AND OPERATION.

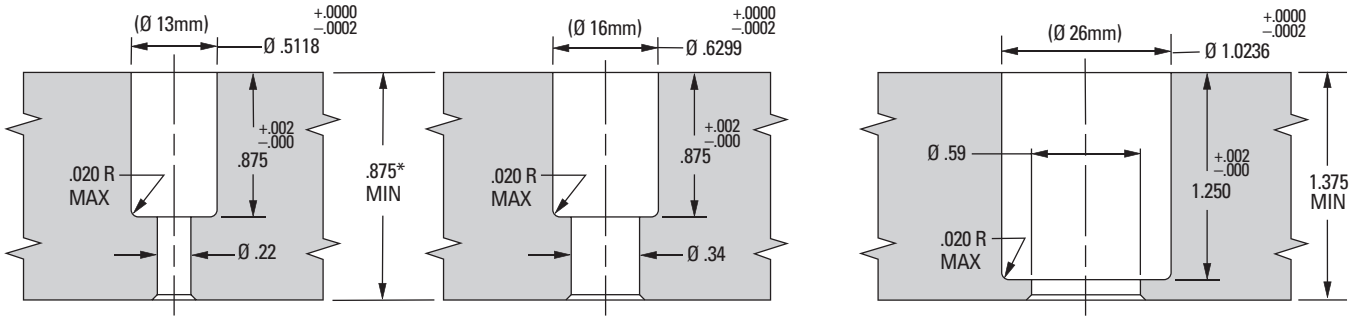
DO NOT ADJUST SPRING PLUNGER. IT HAS BEEN SUPPLIED INSTALLED TO THE CORRECT POSITION.

CAVITY AND CORE COMPONENTS

Runner Shut-Off Inserts – Machining Information

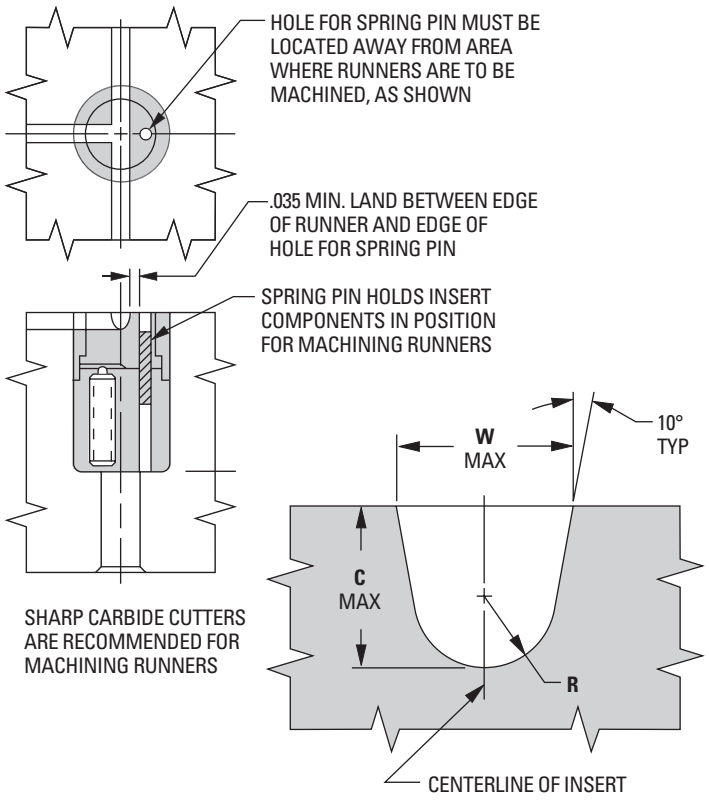
Dimensions for Machining Pocket for Runner Shut-off Inserts

- Pockets are typically bored in soft steel and jig ground in hardened steel
- Maintain a close tolerance press fit, as specified. Too loose a fit could allow the insert to move out of position, while too tight a press fit might prevent the center core from rotating when required



MRS 0013 **MRS 0016** **MRS 0026**

* When using a 7/8 thick plate with the MRS 0013 or MRS 0016 inserts, machine the .5118 or .6299 diameters through the plate. Inserts must seat against a supporting plate before any grinding or machining is done and during the molding process.



Dimensions for Machining Runners

RECOMMENDED RUNNER SIZES					
USE INSERT ITEM NUMBER	W MAX	C MAX	R RADIUS	EQUIV Ø	AREA SQ IN
MRS 0013 (MRS 0016 & 26)	.099	.091	.040	.095	.007
	.126	.120	.050	.123	.012
MRS 0016 (MRS 0026)	.150	.131	.062	.141	.016
	.168	.144	.070	.156	.019
	.186	.157	.078	.172	.023
	.206	.175	.086	.191	.029
MRS 0026	.260	.218	.109	.239	.045
	.298	.250	.125	.274	.059
	.334	.281	.140	.308	.074
	.372	.312	.156	.342	.092
	.410	.343	.172	.377	.112
	.446	.375	.187	.411	.133

Note: All runners should be machined along the center line of the insert and at 90° to the center line. If this is not done the runners will not align closely when rotated 90° or 180° to shut-off material flow to a cavity. All runners should be machined with inserts installed in the mold.

Mold and Runner Machining/Installation Data

Additional machining and installation data available. Contact DME.

Service:

Need help choosing the correct cashew gate? DME engineers are available to assist with a free consultation to identify the ideal cashew gate for your application.
Please send the following information to: DME_Mech_Eng@dme.net

- A copy of your expanded model in XT or Step format
- Resin type
- Gate location
- Number of cavities

We will send you back your model with the cashew gate installed within 24 hours.

Cashew Gate Inserts

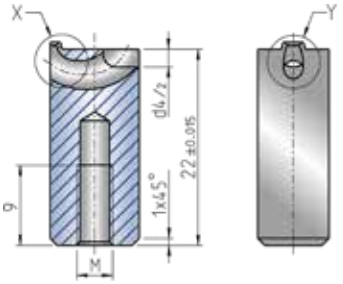
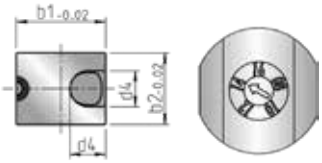
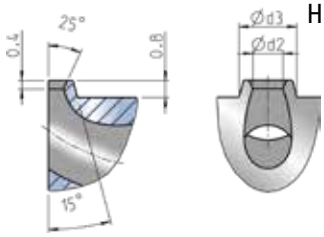
STANDARD FLOW GTE SERIES (Rectangle)

For tunnel gating of small to medium sized moldings along a flat separating plane. The projecting calotte ensures concealed degating.

- Available gate diameters from 0.8 to 2.4mm
- Usable for all thermoplastics including fillers up to 50% glass fiber.







Material: 1.4028-X20Cr13 Stainless Steel
Hardness 50 +5HRC

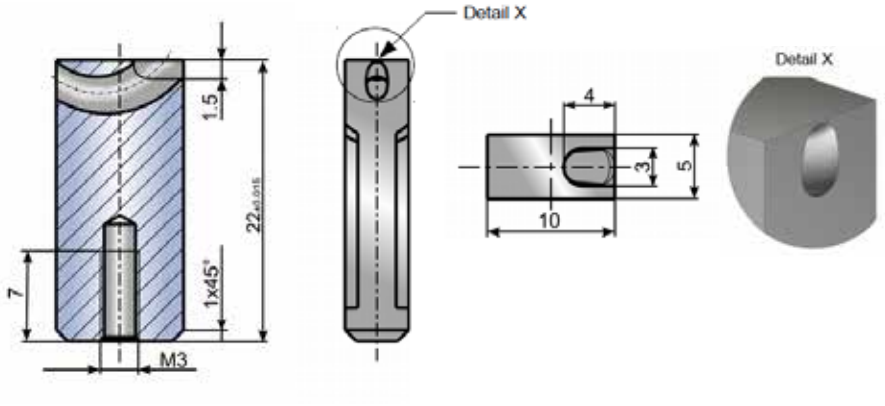
CAVITY AND CORE COMPONENTS

Cashew Gate Inserts

STANDARD CLOSED GATE MINIFLOW® GTM SERIES

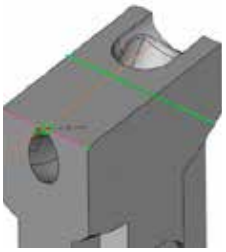
Designed for tunnel gating of small, thin-walled moldings. This gate insert has a closed gate diameter and is therefore suitable for the use of low article weight and for very thin-walled moldings.

- The closed surface enables the creation of individual gate diameters
- Usable for all thermoplastics including fillers up to 50% glass fiber.



Material: 1.4028-X20Cr13 Stainless Steel
Hardness 50 +5HRC

Miniflow GTM (without gate) recommended procedure to insert the gate.



1. Create the gate in 3D CAD. Draw a circle on the end face with the diameter or radius of the gate. Above shows a radius (R0.8) in green.

2. Extrude this sketch with max. possible angle of inclination, depending on gate size, or remove the material immediately by cutting the material incl. draft/taper angle.

3. Thoroughly round off the sharp edge between the bent tunnel and the gate, e.g. by hand using a diamond mounted point.

Installation Example

Page 10 - Installation dimensions

CAVITY AND CORE COMPONENTS

Cashew Gate Inserts

CONTOURABLE MIDIFLOW® GMK SERIES

For bottom (submarine) gating of medium components. Supports contouring to a depth of 8mm. Suitable for gate diameters up to 1.8mm, shot weights up to 200g per insert and all common plastics, including reinforced type.

- Permits gating immediately behind projecting ribs
- Gate may be remote from molding wall
- The spherical geometry in the gate area permits gating on inclined or curved surfaces

Material: 1.4028-X20Cr13 Stainless Steel
Hardness 50 +5HRC

For best operating results the Maxiflow® insert requires one central ejector and one supporting ejector. Please ensure that all sharp edges in the runner are thoroughly rounded. For reliable demolding, the diameter of the runner must exceed that of the curved tunnel.

Optimum gate geometry, with edges rounded

Contouring of a supporting ejector

CAVITY AND CORE COMPONENTS

Tunnel Gate Inserts

CONTOURABLE KONTURFLOW® GTK SERIES

For tunnel gating of small to medium sized moldings contoured in the gate area.

- Maximum gate diameter (pointed tunnel) up to 1.7mm
- Contourable up to 3mm depth
- Usable for all thermoplastics including fillers up to 50% glass fiber

Material: 1.4028-X20Cr13 Stainless Steel
Hardness 50 +5HRC

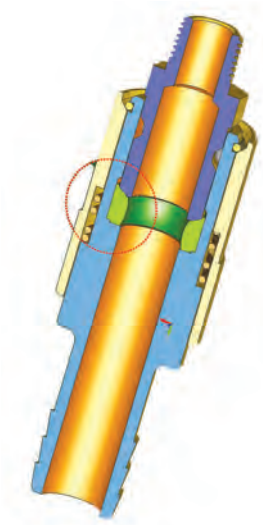
MOLD COOLING

Jiffy-Tite® Connectors



Jiffy-Tite® Delivers Trusted and Reliable Products

The Jiffy-Tite® line of mold cooling components is the industry's most trusted and reliable product range in the injection molding industry. These highly durable and long-lasting components have been the industry benchmark for quality for injection molders for over five decades. It's no surprise that the plastics industry has come to rely on Jiffy-Tite, whose vision and innovation led to the invention of the original ground-breaking face seal technology for quick disconnects more than half a century ago.

These premium products deliver superior quality, unique design, unmatched performance, and the tightest tolerances in the industry – all at a competitive cost. Highly engineered components include quick-disconnect connectors, male and female plugs, extension plugs, straight and spiral brass baffles, water and cascade water junctions, pressure plugs, coolant bridges, and seal removal replacement kits. The bottom line is that Jiffy-Tite components are highly reliable and leak-proof, ensuring the most consistent and efficient mold cooling operations.

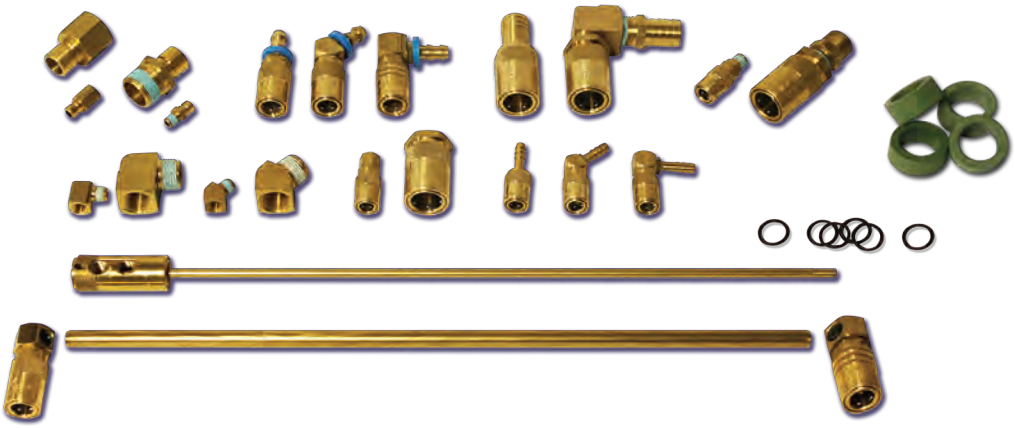
Greater Value than the Rest

Jiffy-Tite components manufactured from high-quality brass are distinguished by a wide range of unique benefits that differentiate them from the competition. Jiffy-Tite's quick-disconnect sockets feature a novel 0.005" to 0.015" step in the sealing surface of the socket to help prevent leaks. A Viton* fluoroelastomer seal provides greater heat resistance and chemical resistance versus typically used silicone seals. Tight-tolerance manufacturing results in consistent pressure in the socket which ensures leak-free performance.

Also unique is the valve component design which eliminates the risk of reverse shut off. With competitive brands, valve components could become dislodged or disengaged causing the valve to shut or stay shut during operation. The internal socket and plug and valve component design eliminate this problem and promote excellent part mating capabilities to ensure smoother operation.

Jiffy-Tite's thread sealant offers superior performance for plugs. Jiffy Seal is pliable, resists drying, and offers significantly better sealing compared to less expensive products that may flake off. The high-performance seal eliminates the need for TPFE tape, thus reducing cost and speeding up set-up times.

Jiffy-Tite components are manufactured under ISO 9000/9001 quality standards and undergo extensive leak and compression testing. Supported by leading-edge engineering and technology, they are the time-tested standard which gives injection molders the required confidence and performance to run highly efficient and smooth mold cooling operations.



***NOTE**: It is up to the customer to verify that the use of Viton seal is compatible with the application and coolant medium being used. Viton is incompatible with highly polar chemicals, organic acids, amines, ketones, acetone, eaters and acetic acid. Other seal materials can be provided on request.

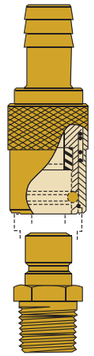
MOLD COOLING

Jiffy-Tite® Connectors

DME Jiffy-Tite plugs used with DME Jiffy-Tite (flow-thru type) Sockets and DME Jiffy-Matic (automatic shut-off type) Sockets are designed for use with plastics molds and die-cast dies in water, air or oil lines. They feature a combination brass and stainless steel leakproof construction, have a maximum rated capacity of 200 psi and withstand temperatures up to 400°F with supplied Viton seals. DME Jiffy-Tite and Jiffy-Matic Sockets can be used interchangeably with the same Jiffy-Tite Plugs already in your mold or die. Comparable sizes of both type sockets have the same O.D., permitting interchangeability even when the plugs are flush mounted.

PLUG

SOCKET



Jiffy-Tite® Sockets – JS
(Flow-Thru Type)

DME Jiffy-Tite Sockets have a large thru hole to provide unrestricted flow. These quick-connection couplers are available with either straight, 45° or 90° hose stems, or standard female or male NPT threads.

DME Jiffy-Tite and Jiffy-Matic Sockets have the same O.D., permitting complete interchangeability with Jiffy-Tite Plugs installed in your mold or die.

The Jiffy-Tite or Jiffy-Matic Sockets can be used with either male, female or extension plugs.

Jiffy-Matic® Sockets – JS
(Automatic Shut-Off Type)

DME Jiffy-Matic Sockets open automatically when connected and shut off automatically when disconnected. Unlike most valve-type connectors, Jiffy-Matic Sockets are designed to keep flow restriction to a minimum.

SV-Series Jiffy-Matic® Connectors

SV-Series Jiffy-Matic® Connectors – JS

Two-Way Automatic Shut-Off Type The DME line of SV-Series Jiffy-Matic Connectors features a male plug and socket, each with an automatic shut-off stemmed valve. These connectors are designed for use with plastics molds and die-cast dies in water, air or heat transfer oil lines. They feature a combination of brass and stainless steel in a leakproof construction, have a maximum rated capacity of 200 psi and will withstand temperatures up to 400°F with supplied Viton seals.

SOCKET

PLUG

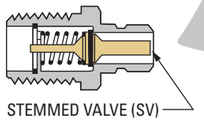
DME SV-Series Jiffy-Matic Sockets can be used interchangeably with the Jiffy-Tite plugs already in your mold or die. However, the SV-Series Jiffy-Matic Male Plugs can ONLY be used with the SV-Series Jiffy-Matic Sockets. Comparable sizes of both types of sockets and plugs have the same O.D., permitting interchangeability even when the plugs are flush-mounted.

The SV-Series Male Plugs are now supplied with Jiffy Seal® thread sealant. Eliminating the initial need for joint tape or compound, the sealant will withstand temperatures up to 400°F and pressures up to 200 psi.

The SV-Series Jiffy-Matic Male Plugs adds the capability of automatic shut-off at the mold, thereby minimizing coolant loss.

SV-Series Jiffy-Matic® Male Plugs

(Automatic Shut-Off Type with Stemmed Valve)

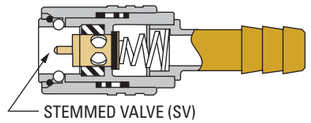


STEMMED VALVE (SV)

The DME SV-Series Jiffy-Matic Male Plugs feature an automatic shut-off stemmed valve. This plug design adds the capability of automatic shut-off at the mold. The plug's shut-off stemmed valve minimizes mold coolant loss, thereby decreasing clean-up time and the possibility of rust occurring on the mold surface. The SV-Series Jiffy-Matic Male Plug can ONLY be used with the SV-Series Jiffy-Matic Socket.

SV-Series Jiffy-Matic® Sockets

(Automatic Shut-Off Type with Stemmed Valve)



STEMMED VALVE (SV)

The DME SV-Series Jiffy-Matic Sockets feature an automatic shut-off stemmed valve that is designed to work with the SV-Series Jiffy-Matic Male Plugs, as well as the standard male, female and extension plugs. The sockets open automatically when connected and shut-off automatically when disconnected. The SV-Series Jiffy-Matic Sockets are designed to keep flow restriction to a minimum and are available with either straight, 45° or 90° hose stems.

Jiffy-Lok® Connector Sockets

With Clampless Hose Stems for use with "Push-To-Lock" Type Hose

- For use with "Push-to-Lock" type hose only
- Saves set-up time by eliminating the need for hose clamps
- Hose stem barbs mate with "Push-to-Lock" style rubber hose
- Popular sizes for interchangeability with existing Jiffy-Tite, Jiffy-Matic and Jiffy-Matic SV Sockets
- More compact and consistently sized than competitive sockets
- Leakproof brass and stainless steel construction
- Replaceable seals and valves for long service life
- Socket connector seals are Viton

Jiffy-Tite® Connector Seals, Seal Removal Tool Kit & Wrenches

Jiffy-Tite® Connector Seals

For Replacement in Either Jiffy-Tite or Jiffy-Matic Sockets

Jiffy-Tite and Jiffy-Matic Sockets are supplied with Viton* seals for use with air, water or heat transfer oil applications that do not exceed 400°F and 200 psi. Seals should be replaced periodically as required to ensure leak-free connections.

MAXIMUM OPERATING TEMPERATURE/PRESSURE = 400°F/200 PSI			
FOR USE WITH	SEAL MATERIAL (I.D. COLOR)	ITEM NUMBER*	USED WITH SOCKETS
AIR, WATER OR HEAT TRANSFER OIL	VITON (GREEN)	P2008	JS204(V/SV) TO 226(V/SV)
		P3008	JS306(V/SV) TO 328(V/SV)
		P5008	JS504(V) TO 526(V)

***Sold in packs of 10**

***NOTE**: It is up to the customer to verify that the use of Viton seal is compatible with the application and coolant medium being used. Viton is incompatible with highly polar chemicals, organic acids, amines, ketones, acetone, eaters and acetic acid. Other seal materials can be provided on request.

Jiffy-Tite® Seal Removal Tool Kit – JSTK

The Jiffy-Tite Seal Removal Tool Kit can be used for removal of connector seals from Jiffy-Matic Sockets (including SV Series). Can also be used with Jiffy-Tite Sockets to provide easier seal removal.

ITEM NUMBER
JSTK235

Note: This tool kit is not required for "the original" or current line of Jiffy-Matic Sockets with removable hose stems.

Includes handle, interchangeable tools for all socket sizes, seal pick and vinyl storage pouch.

Jiffy-Tite® Wrenches – SJP

For Jiffy-Tite Male, Female and Extension Plugs and Jiffy-Matic SV Series Male Plugs

DME Jiffy-Tite wrenches are accurately made from selected alloy steel, heat-treated and chrome-plated. They are specially designed for servicing flush-mounted plugs.

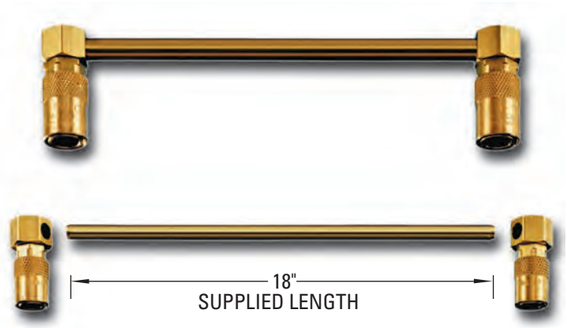
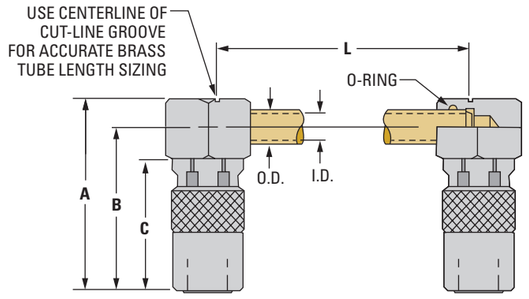
Jiffy-Tite® and Jiffy-Matic® Coolant Bridges

For Compact Mold Connection of Adjacent Plugs Without Use of Conventional Hose Loop

- Provides more compact port-to-port connections than conventional hose methods
- Coolant Bridge socket adapters allow quick connections to Jiffy-Tite (flow thru) or Jiffy-Matic (one- or two-way shutoff) plugs
- Socket adapter marked with cut-line groove for quick sizing of brass tube length
- Leakproof socket adapters have replaceable seals and valves for long service life
- Socket connector seals and O-ring seals are Viton



Complete assembly consists of 3 pieces. All pieces sold separately.



Notes:
1. Coolant Bridge consists of two socket adapters (including O-rings) and one chamfered brass tube that are sold separately.
2. Tubes are 18" long. Cut to suit for specific application using cut-line grooves. Then, chamfer and deburr tube as indicated in installation data.
3. Coolant Bridge Jiffy-Matic socket adapters will provide one-way shutoff when used with standard male, female and extension plugs and two-way shutoff when used with SV-Series Male Plugs.
4. Maximum temperature rating is 400°F. Maximum PSI rating is 200.

Installation data available. Contact DME.

Jiffy-Tite® Cascade Water Junctions

- Compact design
- 360° seal – leak proof
- Accurate predetermination of port locations
- Easy "one-piece" installation and removal

For cascade-type cooling applications, the Jiffy-Tite Cascade Water Junctions provide the utmost in versatility and ease of use. Their compact design makes them ideal for cooling inserted cores or spot cooling in hard to reach areas of molds or dies. They can be rotated a full 360° without affecting their positive Jiffy-Tite seal and are easily connected and disconnected – even when installed internally.

Final location of the ports on the body of the Water Junction can be accurately predetermined, thus ensuring proper lateral alignment with pipe clearance holes. Waterlines may be connected to the same side or opposing sides of the Water Junction. A slot on the end of the Water Junction body indicates port position and can be turned with a screwdriver to align the ports with pipe clearance holes.

The brass tube has the rigidity to maintain uniform spacing inside the water channel and is threaded into the body for firm support.

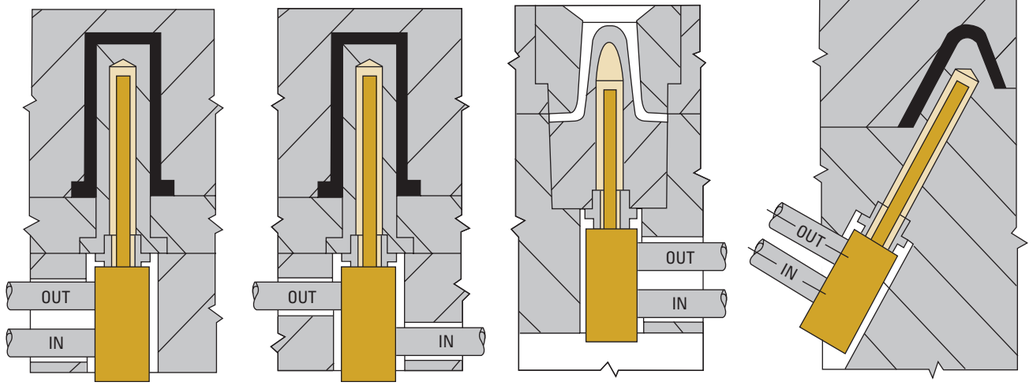
Typical Applications



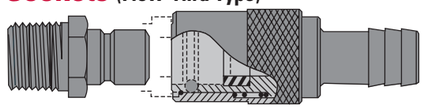
MOLD COOLING

MoldBasics® Hose Connectors

DME plugs used with DME flow-thru type Sockets and DME Automatic Shut-off Type Sockets are designed for plastics molds and die-cast dies in water, air or oil lines. They feature a combination brass and stainless steel leakproof construction, have a maximum rated capacity of 200 psi and withstand temperatures up to 400°F, with supplied Viton seals. DME Sockets can be used interchangeably with the same Plugs already in your mold or die. Comparable sizes of both sockets types have the same O.D., permitting interchangeability even when the plugs are flush mounted.

SOCKET PLUG

Sockets (Flow-Thru Type)

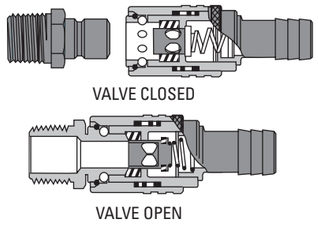


DME Flow-Thru Type Sockets have a large thru hole to provide unrestricted flow. These quick-connection couplers are available with either straight, 45° or 90° hose stems, or standard female or male NPT threads.

DME Flow-Thru and Automatic Shut-Off Type Sockets have the same O.D., permitting complete interchangeability with Plugs installed in your mold or die.

The Sockets can be used with either male, female or extension plugs.

Sockets (Automatic Shut-Off Type)



DME Automatic Shut-off Type Sockets open automatically when connected and shut off automatically when disconnected. Unlike most valve-type connectors, DME Sockets are designed to keep flow restriction to a minimum.

MOLD COOLING

MoldBasics® SV-Series Hose Connectors

SV-Series Connectors – NS

Two-Way Automatic Shut-Off Type

SOCKET

PLUG

The DME line of SV-Series Connectors features a male plug and socket, each with an automatic shut-off stemmed valve. These connectors are designed for use with plastics molds and die-cast dies in water, air or heat transfer oil lines. They feature a combination of brass and stainless steel in a leak-proof construction, have a maximum rated capacity of 200 psi and will withstand temperatures up to 400°F with supplied Viton seals.

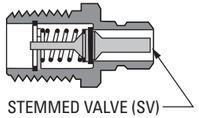
The SV-Series Male Plugs add the capability of automatic shut-off at the mold, thereby minimizing coolant loss.

DME SV-Series Sockets can be used interchangeably with the plugs already in your mold or die. However, the SV-Series Male Plugs can ONLY be used with the SV-Series Sockets. Comparable sizes of both types of sockets and plugs have the same O.D., permitting interchangeability even when the plugs are flush-mounted.

The SV-Series Male Plugs are now supplied with thread sealant. Eliminating the initial need for joint tape or compound, the sealant will withstand temperatures up to 400°F and pressures up to 200 psi.

SV-Series Male Plugs

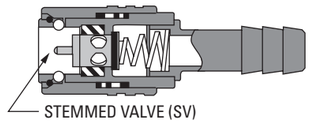
(Automatic Shut-Off Type with Stemmed Valve)



The DME SV-Series Male Plugs feature an automatic shut-off stemmed valve. This plug design adds the capability of automatic shut-off at the mold. The plug's shut-off stemmed valve minimizes mold coolant loss, thereby decreasing clean-up time and the possibility of rust occurring on the mold surface. The SV-Series Male Plug can ONLY be used with the SV-Series Socket.

SV-Series Sockets

(Automatic Shut-Off Type with Stemmed Valve)



The DME SV-Series Sockets feature an automatic shut-off stemmed valve that is designed to work with the SV-Series Male Plugs, as well as the standard male, female and extension plugs. The sockets open automatically when connected and shut off automatically when disconnected. The SV-Series Sockets are designed to keep flow restriction to a minimum and are available with either straight, 45° or 90° hose stems.

Operating Combinations

MOLD COOLING

MoldBasics® Hose Connector Sockets and Replacement Connector Seals

With Clampless Hose Stems for use with Push-To-Connect/Push-To-Lock Type Hose

- For use with push-to-connect/push-to-lock type hose only
- Saves set-up time by eliminating the need for hose clamps
- Hose stem barbs mate with "Push-to-Lock" style rubber hose
- Popular sizes for interchangeability with existing and SV Sockets
- More compact and consistently sized than competitive sockets
- Leakproof brass and stainless steel construction
- Replaceable seals and valves for long service life
- Socket connector seals are Viton

Note: Use "Push-to-Lock" type hose only. Connector Sockets are for use with water and water-based coolants only. Although Connector Sockets are suitable for temperatures to 400°F, observe the temperature ratings of your "push-to-lock" hose. Most "push-to-lock" hoses have a temperature rating of 175°F or less. Never exceed 200 psi.

Replacement Connector Seals

Sockets are supplied with Viton seals for use with air, water or heat transfer oil applications that do not exceed 400°F and 200 psi. Seals should be replaced periodically as required to ensure leak-free connections.

MAXIMUM OPERATING TEMPERATURE/PRESSURE = 400°F/200 PSI

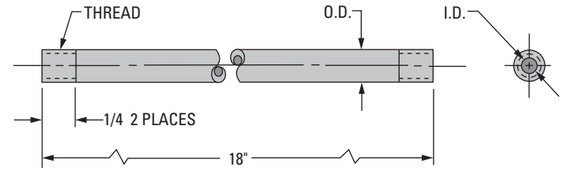
MOLD COOLING

Bubbler Tubes, Brass Diverting Plugs and Rods

Bubbler Tubes

- Available in brass or 304 stainless steel

DME Bubbler Tubes are used for cooling cores in molds or dies. They are supplied threaded at both ends, thus permitting two threaded tubes to be cut from the 18" length supplied. They can be used as replacement tubes in Cascade Water Junctions.



Brass Bubbler Tubes – BT

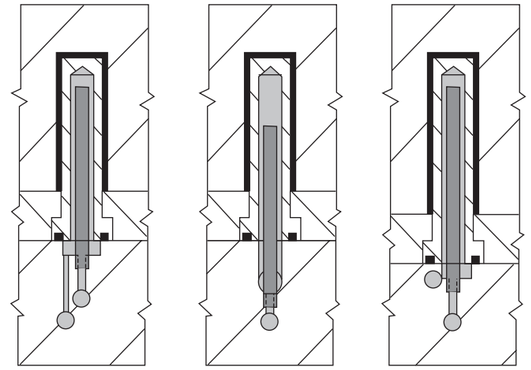
*Press fit

Typical Applications

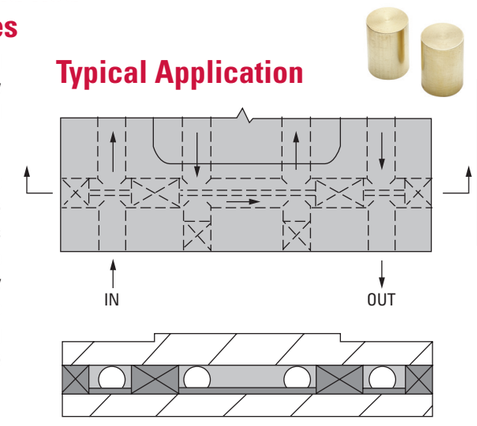


Brass Diverting Plugs and Rod for Steam and Waterlines

DME Brass Diverting Plugs and Rods are used to redirect water flow through waterlines drilled in a mold or die.

The plugs are pushed into the waterline, and the rods are cut to appropriate lengths to serve as spacers or stops between the plugs. All plugs are proportionately longer than their diameter to ensure that they will pass by intersecting waterlines without twisting into them.

Typical Application



Brass Diverting Plugs – BF

BFR18

MOLD COOLING

Cascade Water Junctions

DME Cascade Water Junctions are ideal for cooling plastics molds and die-cast dies where drilled waterlines through the block are not possible due to interference with ejector pins, sprue puller pins, etc.

The brass tube has the rigidity to maintain uniform spacing inside the water channel and is threaded into the body for firm support. Waterlines may be connected to the same side or opposing sides of the brass hexagonal body.

The Nipple Type Water Junction provides low-cost rigid installation. The 2" long pipe nipple can be replaced with a longer pipe nipple to suit the application.

The Jiffy-Tite Socket Type is more easily connected and disconnected when mold is set-up, transported or stored. The socket is equipped with internal Viton seals (P3008).

Note: Bubbler Tubes may be used as replacements in Water Junctions.

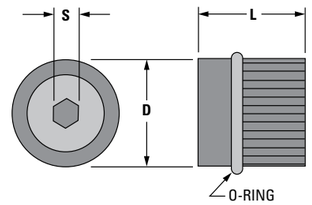
MOLD COOLING

Brass Pressure Plugs

Threadless Brass Pressure Plugs (INCH) – TBP

- Seals even in rough or corroded holes
- No tapping required
- Withstands pressures up to 72 psi

DME Threadless Brass Pressure Plugs employ a time-saving expandable O-ring design. As the plug's socket head screw is tightened, the O-ring expands to provide a positive seal. No tapping is required and installation or removal is quick and easy. The smaller diameters are ideal for use in cavity inserts or slide blocks where space is limited. **(Not recommended for use in oil lines.)**



ITEM NUMBER	NOMINAL SIZE	LENGTH L	HEX SIZE S	DRILL SIZE D	VITON REPLACEMENT O-RINGS (PKG. OF 10)

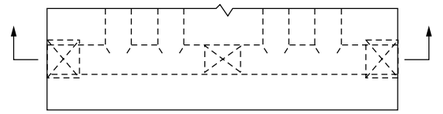
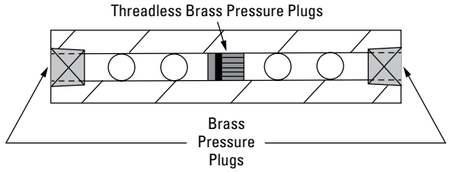
Note: O-ring material is suitable for use with temperatures up to 200°F.

TYPICAL APPLICATIONS

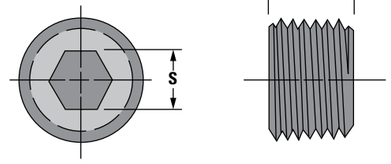




Brass Pressure Plugs (INCH) – BP

- For steam, water or oil lines
- Positive tapered seal
- Withstands pressures up to 600 psi

DME Brass Pressure Plugs give a high-pressure seal through a deliberate difference of taper between the plug and the tapped hole. Flush seating is achieved through closer control of thread forms, sizes and taper.



HIGH-PRESSURE SEAL
Dryseal thread form with 7/8 taper per foot. Install in standard 3/4 TPF tapped hole.

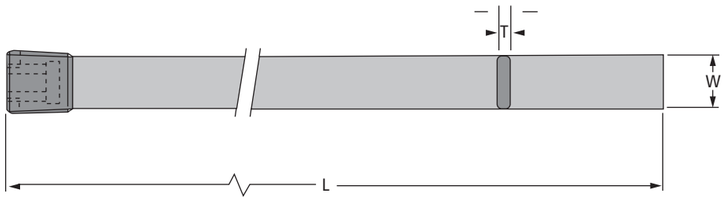
MOLD COOLING

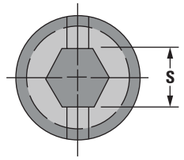
Benefits of Turbulent Flow Plastic Baffles

Improve mold cooling performance over traditional brass baffles

Turbulent Flow Plastic Baffles Benefits

- Patented side wipers prevent coolant blow-by, ensuring coolant flow to the end of baffles
- Results in better cooling of targeted hot spots
- Dramatically improves cooling time
- Increases coolant flow velocity and lowers Delta "T" across mold surface
- Built-in ribs encourage turbulent flow and reduce stagnant laminar flow
- Turbulent flow dissipates about 3x the BTUs as compared to laminar flow
- Non-hygroscopic, glass-reinforced engineering thermoplastic (polypthalamide) excels under high heat, providing better temperature stabilization
- Pre-wrapped with TPFE tape
- Maximum coolant temperature recommended: 100°C (212°F)





Slot indicates baffle position

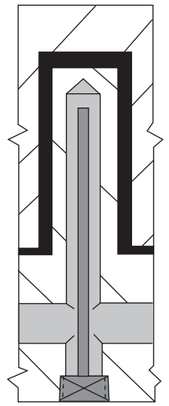
MOLD COOLING

Guidelines to Efficient Water Cooling

- Ensure good coolant flow rates (Reynolds number of 4000 minimum. See Reference Table below.)
- The golden rule for optimum cooling is to maximize GPM (gallons per minute). DME recommends in-line coolant flow meter usage. In-line coolant flow meters are available from DME Industrial Supplies
- Coolant feed channels should be the same size or larger than the calculated coolant channel
- Keep coolant channels clean with filtering and scheduled channel maintenance to de-scale coolant channels
- Use parallel cooling versus series cooling, as appropriate
- Minimize restrictions within cooling circuit

Typical Applications



Reynolds Number

In fluid mechanics, the Reynolds number is the ratio of inertial forces to viscous forces and quantifies the relative importance of these two types of forces for given flow conditions.

Turbulent Flow Reference Table

APPROXIMATE MINIMUM FLOW (in gallons per minute)		
PIPE SIZE NPT	DRILLED PASSAGE I.D. INCHES	FLOW RATE GPM
⅛ NPT	0.250"	0.33
⅛ NPT	0.339"	0.44
¼ NPT	0.438"	0.55
⅜ NPT	0.593"	0.74
½ NPT	0.719"	0.9
¾ NPT	0.938"	1.17
1 NPT	1.156"	1.44

Approximate Minimum Flow (in gallons per minute) required for turbulent flow in drilled water passages based on a Reynolds number of 4000.

How to Check Coolant Flow Rate

- Remove the exit hose from a mold-cooling channel and fill a 1- or 5-gallon container while measuring the amount of time it takes to fill the container.
- Calculate the amount of coolant that flowed through the exit hose into the container.
  - For example, filling a 5-gallon container in 8 minutes is a flow rate of .625 gallons per minute (5 over 8 or 5/8 = .625)
  - .625 gallons per minute is a very good flow rate for a 1/4 NPT cooling channel. However, this would NOT be turbulent flow for a 3/8 NPT flow channel.
- Additionally, many other factors influence the cooling process, including coolant channel placement, distance the cooling channels are from the cavity or core molding surface, distance between each cooling channel, and the number of cooling channels.
- Furthermore, if water deposits such as lime and other hard water mineral deposits are allowed to accumulate, the walls of the cooling channels will become insulated. Turbulent flow is less beneficial under these conditions.
  - Practice filtering the coolant along with regularly scheduled coolant channel maintenance to de-scale coolant channels.
- Mold materials also play a significant role in cooling time. For example, replacing 420 Stainless Steel cores with a Copper Alloy such as Moldstar (as supplied by DME) can significantly reduce cycle time.
- Lastly, remember that regular cooling channel maintenance and turbulent water flow rates for the size of the cooling channels will have an enormous effect on the mold's cooling capacity.

MOLD COOLING

Straight Brass Plug Baffles

DME Brass Plug Baffles, available in both straight and spiral styles, are constructed entirely of high-quality brass with blades brazed to the plugs for long, dependable service. They provide a high-pressure seal through a deliberate difference of taper between the plug and the tapped hole.

The function of the baffle is to split the drilled waterline into two equal channels. As the heating or cooling medium enters, the baffle diverts the flow to travel up to and over the end of the baffle and down the other side.

Clearance must be provided between the end of the baffle and the end of the drilled channel to provide adequate flow. See Dimension "C" for approximate clearances.

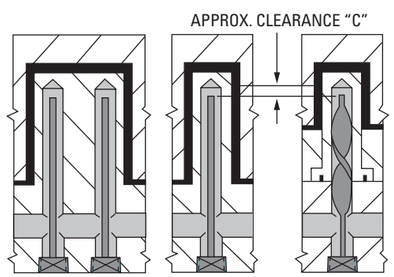
Typical Applications



MOLD COOLING

Spiral Brass Plug Baffles

Spiral Baffles

Spiral baffles improve cooling balance by creating turbulent action in the channel, reducing laminar or straight-layered flow patterns and providing efficient coolant movement.

MOLD COOLING

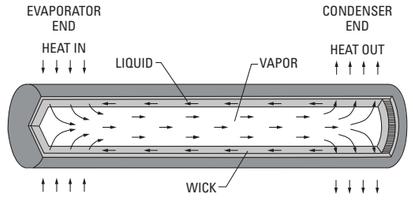
Heat Pipes - Cooling Pins

How and where heat pipes work

The DME Heat Pipe is a heat transfer device specifically designed for optimal performance in plastic injection molds. It consists of a vacuum-tight copper tube containing a wick and a non-toxic working fluid. One end of the heat pipe is an evaporator, the opposite end is a condenser. Thermal energy is gathered at the evaporator end, vaporizing the working fluid. This vapor then travels through the Heat Pipe to the condenser end. At the condenser end the vapor condensates back into a liquid, giving up its latent heat in the process. To complete the cycle the condensed liquid then travels along the wick, via capillary action, back to the evaporator section. This process repeats itself continuously, transferring heat many times faster than pure copper.

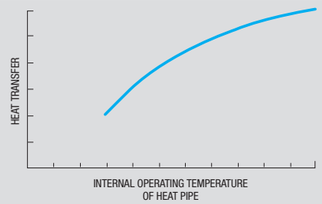
How heat pipes are used

Available in a variety of standard lengths and diameters, DME Heat Pipes are used in cores, core slides, cavities and other areas of a mold or die requiring cooling or controlled temperatures. Commonly used in place of bubblers, baffles, fountains or blades, Heat Pipes transfer heat rapidly to the coolant, rather than requiring the coolant to flow into the heated area. They are also used to transfer heat to a cooler portion of the mold (which serves as a heat sink) or to open air, thereby permitting cooling of otherwise inaccessible areas and eliminating potential coolant leakage.



Standard injection molding heat pipes

The standard line of Heat Pipes for injection molding includes both a low-temperature (TPL) and a high-temperature (TPH) series. The TPL Series works most efficiently between the temperatures of 40˚ and 200˚F with a coolant temperature of approximately 60˚ to 80˚F, and the TPH Series between 150˚ and 400˚F with a coolant temperature of approximately 90˚ to 110˚F. The sealed end of each heat conductor is color-coded (BLACK for the TPL series and WHITE for the TPH Series). Selection of the appropriate series is based on the application's melt, mold surface and coolant temperatures to which the Heat Pipe will be subjected.



MAXIMIZING EFFICIENCY WITH WARM COOLANT

Heat Pipes work best when the coolant is between 60° and 110°F, and sometimes higher. The graph illustrates how the Heat Pipe's heat transfer capability is dependent upon its internal operating temperature. It is best to start with the coolant temperature high, then reduce it if necessary.

Benefits of heat pipes

Cool Molds Faster and Reduce Cycle Time

The Heat Pipe's ability to cool molds faster and thus reduce cycle time is due to a number of factors. First, waterlines throughout the entire mold can be larger in diameter, permitting a higher coolant velocity, which transfers heat faster. Second, the larger volume of fluid flowing through the waterline results in a lower overall coolant temperature rise, so that the last Heat Pipe in the system will transfer heat as efficiently as the first. Third, the extension of the Heat Pipe into the waterline promotes turbulent flow, which transfers heat faster than laminar flow. Fourth, the ability to transfer heat away from inaccessible areas improves the overall cooling rate and reduces cycle time, even if extension into a remote waterline is impractical or impossible.

Improve Part Quality

As the Heat Pipe transfers heat to the coolant, air or mold component, it also dissipates heat evenly along its entire length. This isothermal action provides faster and more uniform cooling, thus eliminating hot spots, which cause sink marks, pulling and spotting.

Simplify Mold Design and Lower Costs

With Heat Pipes, waterline design is greatly simplified since coolant flow into the heated area of the mold is not required. In addition, the ability to locate heat conductors in areas inaccessible to other cooling devices can further simplify the overall mold design. In most cases, the machining and construction time required for the mold is reduced, lowering moldmaking costs.

Reduce Maintenance and Operating Costs

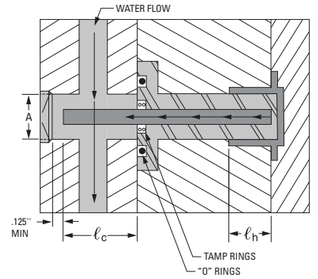
The increased waterline diameter, coolant velocity and heat capacity effectively eliminate scale formation, calcium deposits and the plugging up of small waterlines and ports. In addition, Heat Pipes operate in any coolant without corroding.

Upgrade Existing Molds and Dies

Heat Pipes effectively solve cooling, cycle time or part quality problems in existing molds. They can be retrofitted as replacements for bubblers or baffles and to provide heat transfer in previously uncooled areas.

Salvage Damaged Molds and Dies

In certain applications, Heat Pipes can even be used to salvage or repair molds that would otherwise have to be scrapped or extensively reworked.



Selecting the right size and shape

The standard diameters and lengths of TPL and TPH Series Heat Pipes will satisfy most applications.

TPL & TPH SERIES	TOLERANCES
Diameter (O.D.)	±.004
Length	±.020

NOTE: Heat Pipes cannot be used as ejector pins and parts cannot be molded or cast against them. Also, Heat Pipes cannot be cut, machined, bent or plated. If a special size is required, contact DME to discuss your application.

TPL and TPH heat pipes for injection molding

For low-temperature Heat Pipes (40˚-200˚F) use TPL (color-coded BLACK) as a prefix in front of item number in the chart below. For high-temperature Heat Pipes (150˚-400˚F) use TPH (color-coded WHITE) as the prefix. Examples: TPL8600; TPH6500.

LENGTH (INCHES)	TPL & TPH DIAMETER & ITEM NUMBER

Silver heat transfer compound* –HTC06S

ITEM NUMBER
HTC06S

Contains micronic particles of silver to provide a thermal resistance of 4.75°C in/watt. The compound is supplied in a 5cc plastic syringe. (DME recommends the Silver Heat Transfer Compound because it has eight times lower thermal resistance than the copper equivalent.)

Copper heat transfer compound* – HTC30C

ITEM NUMBER
HTC30C

Contains micronic particles of copper to provide a thermal resistance of 38°C in/watt. The compound is supplied in a 5cc plastic syringe.

* For .125" diameter Heat Pipes, do not use applicator tube supplied with Heat Transfer Compound. Apply desired amount of compound directly into core hole.

Tamp ring sets – TARS

Each set includes 32 silver alloy tamp rings (enough for installing 16 Heat Pipes) and one hollow tamping tube. Select the required tamp ring set by its I.D. to match the O.D. of the Heat Pipe being used.

ITEM NUMBER	TARS-04	TARS-06	TARS-08	TARS-10	TARS-12	TARS-16

MOLD COOLING

High-Temperature Insulator Sheets and Locating Rings

High-Temperature Insulator Sheets (HTIS) for Plastics Molds and Die-Cast Dies

- Asbestos-free material
- High compression strength
- Machinable with high-speed cutting tools

DME High-Temperature Insulator Sheets are used on molds and dies between the top clamping plate and the stationary platen, and between the bottom of the ejector housing and the movable platen. The thermal insulating properties of this unique asbestos-free, glass-reinforced polymer composite inhibit heat transfer from the mold to the platen, or from the platen to the mold (depending on the application), which helps conserve energy and prolong machine life. These sheets have excellent non-deformation characteristics and a compressive strength,* which is higher than asbestos and mica materials. Compression molded for high impact strength, they are supplied micro-finished top and bottom, parallel within ±.002.

*49,400 psi at 75°F

MOLD COOLING

Pre-Machined Insulator Sheets

Pre-Machined Insulator Sheets for Plastics Molds

Standard Features

Insulator Sheets are designed to fit most standard mold base sizes (see table lower right).

- Pre-machining includes:
  - Assembly screw hole clearance
  - Locating ring clearance hole
  - Insulator sheet mounting holes
- 2 thicknesses of Insulator Sheets (¼" or ½")
- Specifically designed to be 1/16" shorter on all sides to prevent sheet damage during mold handling
- Custom Insulator Sheets available
- Asbestos-free material
- High compression strength
- Use with locating rings 6541 and 6544
- Can be used on both top and bottom of mold bases

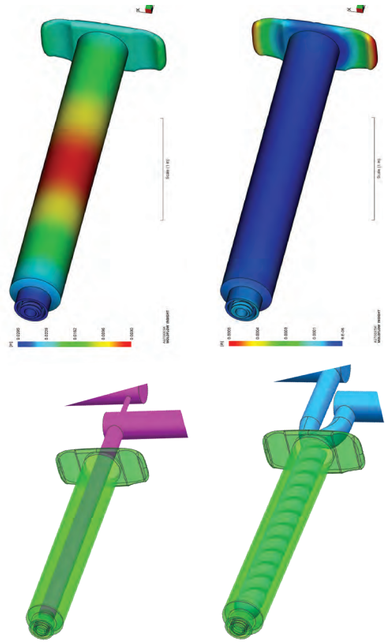
TruCool™ MOLD COOLING

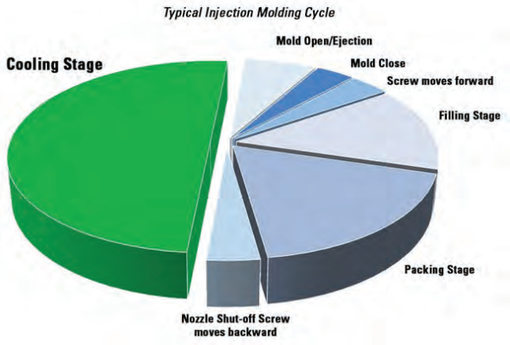
MOLD COOLING SOLUTIONS

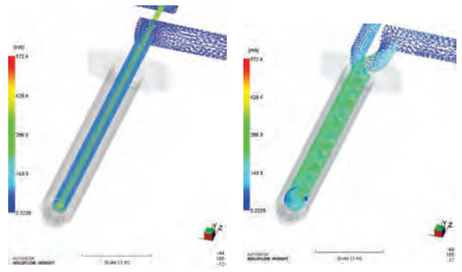
DME TruCool™ Conformal Cooling is a Revolutionary Technology

TruCool™ addresses the thermal management of the injection molding process. Through the use of metal 3D printing, we manufacture inserts, slides, lifters and more, that can now contain cooling channels previously unimaginable. This technology has been proven over several years of research and development all the while pushing the limits of plastic injection molding. In existing molds, **TruCool™** inserts are typically able to reduce overall cycle time by an average of 25%, reduce warpage by nearly 35%, improves part quality through reduced thermal stress which results in material savings with less scrap and less press time while obtaining the same E.A.U. (Estimated Annual Usage) in comparison to conventional means. Typical R.O.I. (return on investment) is less than 3 months.

Should **TruCool™** inserts be considered at the lead of a project, additional benefits would include a complete thermal control of the mold, additional part design and engineering flexibility, a reduced cavity count which directly relates to a smaller tool and a smaller press ultimately reducing overall cost while again, still producing the same E.A.U. as well as a superior end user product.







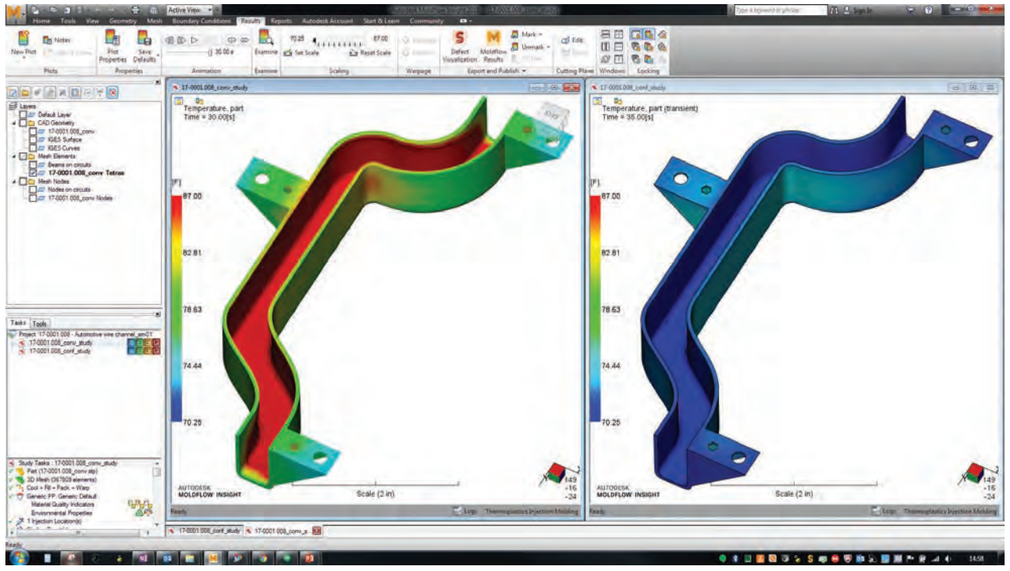
TruCool™ MOLD COOLING

MOLD COOLING SOLUTIONS

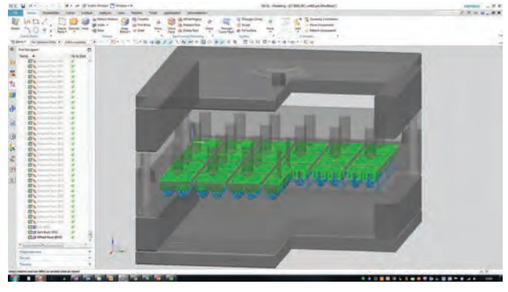
DME TruCool™ Solutions

The DME **TruCool™** team utilizes Moldflow™ insight software for our analysis processes. A baseline analysis will be run to determine where the need for **TruCool™** inserts would be, design conformal channels and inserts into the model, followed by a comparative analysis to confirm expected results.

Analysis results will be provided for review in an easy to understand presentation or as a 3-D viewer file when requested. DME works with OEM, production facility, tool makers and a variety of other companies looking to improve product quality, and efficiency all while reducing cost. TruCool inserts qualify for a two (2) year/one (1) million shot warranty[1] and are guaranteed meet our analysis[2].



On the design side, DME uses Siemens NX CAD software. With DME's extensive tooling background, we not only offer design work for our **TruCool™** conformal cooling line of products, but we are additionally able to provide full mold design consultation. The Design Team is always available to support our clients starting at the initial stages of development, to supplying the mold base (through our manufacturing department), and everything in between. This sets customers at ease knowing they have over seven decades of engineering behind them. Companies of any size and global location can all benefit from the mold technology knowledge DME has developed. On the heating side of the process with hot runner manifolds and even conformal heating channels for dynamic thermal cycling, all the way to the cooling of the mold, we can help reduce delta on your part an increase the efficiency of your mold from beginning to end.

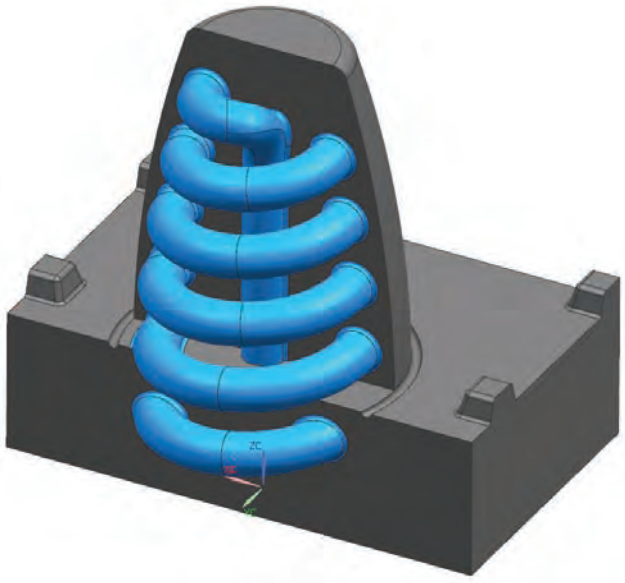


1. Annual maintenance required.
2. When all necessary information is provided by customer, failure would apply to a discount on future projects, requires DME review of mold in operation prior to and after conformal modification.

TruCool™ MOLD COOLING

MOLD COOLING SOLUTIONS

DME TruCool™ Printed Inserts



Wide range of materials available for TruCool™ conformal inserts:

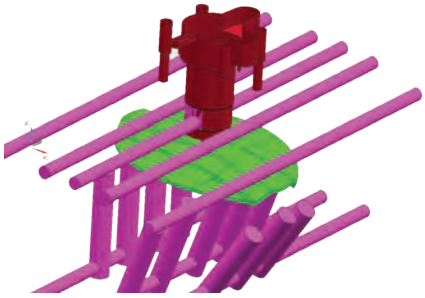
- MS-1
- Aluminum
- CX Stainless
- P-20
- H-13
- 420SS

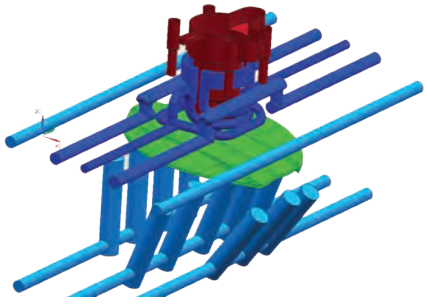
Capability of A-1 polish finish (using P-20, H-13 or 420SS)

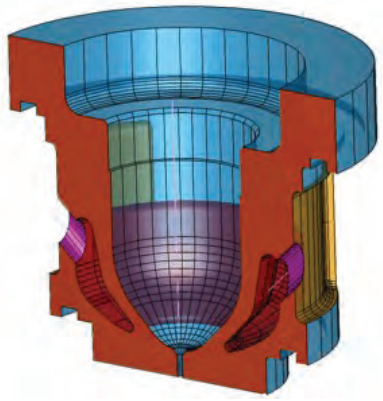
Larger volumes:

- Sizes up to 35.4" (900mm) X 23.6" (600mm) X 19.6" (500mr

Development of standardized "off the shelf" componentry for plug-n-play ease and cost savings







- Hot tip gate insert (2 major hot runner manufactures already on board)
- Cold sprue bushing
- Customizable pre-printed inserts
- Core pins

Self-Lubricating Bushings for Guide Pins

DME Self-Lubricating Bushings can save time and money in the design, construction and operation of injection molds. They are ideal for clean-room conditions or any applications where the parts being molded prohibit the use of external lubricants, such as medical, electronic and food-related products. Their built-in lubrication capability also makes them a good choice for fast-cycling, high-production molds.

Guided Ejection Guide Pins

Guided Ejection Guide Pins – GL

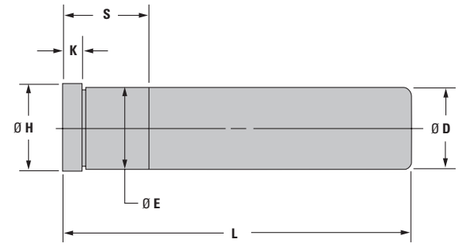
- Short press fit lengths for use in guided ejection applications
- Pins are hardened and precision ground

System 1

When pins are installed in the support plate, ejector housing can be removed from mold without removing ejector plates, permitting easy access to service the ejector system.

System 2

Pins installed in the ejector housing permit fast, low-cost installation. When ejector housing is removed from mold base, the complete ejector assembly is removed.



It is recommended that a minimum of four pins and bushings be installed. Size of the pins and bushings should be determined by the size of the mold. The Guided Ejection System is an inexpensive method to protect against wear and costly damage to a mold in production.

Properly installed, the DME Guided Ejection System holds the ejector assembly in alignment and supports the weight of the ejector assembly throughout the entire machine cycle. This greatly reduces wear on ejection components and prevents possible cocking of the ejector plates.

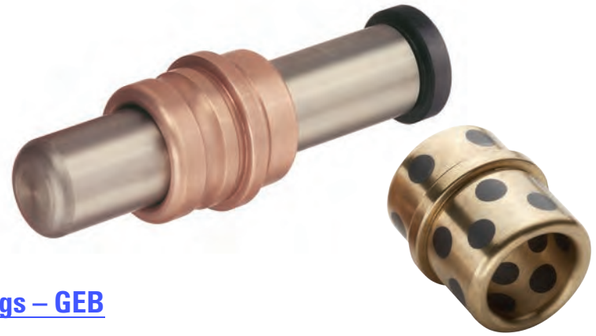
Guided Ejection Bushings

- Holds the ejector assembly in alignment
- Supports the weight of the ejector assembly throughout the entire cycle
- Reduces wear on ejection components
- Prevents cocking of the ejector plates



DME Guided Ejection Systems are available installed in standard mold bases. For additional information and prices, contact DME.

Bronze-Plated Guided Ejection Bushings – GEB

The Bronze-Plated Guided Ejection Bushings feature the strength of steel plus the nonscoring lubricity of bronze plating. Internal oil grooves and a lubrication hole help to ensure smoother mold operation.

It is recommended that a minimum of four bushings be installed. The size of the bushings should be determined by the size of the mold. The Guided Ejection System is inexpensive protection against wear and possible costly damage to a mold in production.

MOLD COMPONENTS – INCH

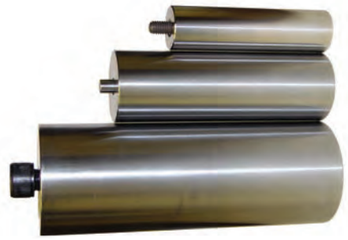
Support Pillars and Stop Pins

Support Pillars

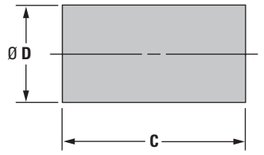
S.A.E. 1040 Steel

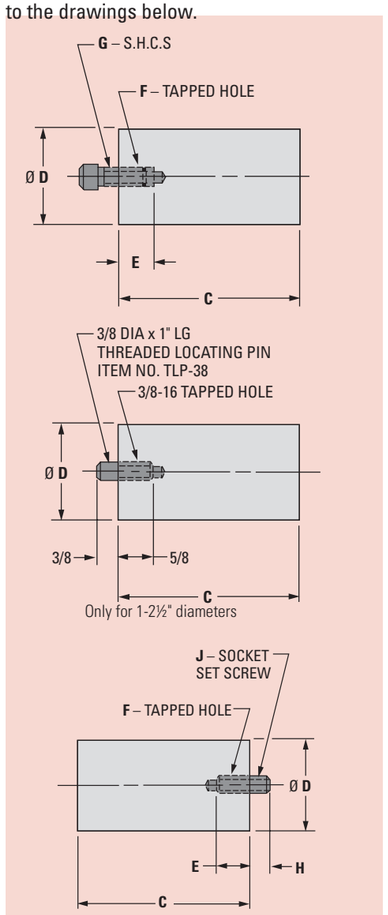
Pillar height (C dimension) is finished flat and parallel.

Support pillars should be used liberally since they greatly increase the capacity of the mold to support the projected area of the cavities, runner and sprue. By providing additional support, they prevent deflection of the mold. The absolute necessity of using support pillars is demonstrated by using standard strength of materials formulas. For example, an 11⅞ x 15" mold base without support pillars and with a maximum permissible load on the support plate, will permit 14 square inches of cavity area without deflecting enough to cause flash. The use of one row of support pillars on center will quadruple this permissible cavity area to 56 square inches. Two rows will give nine times the area or 126 square inches. Please refer to the drawings below.

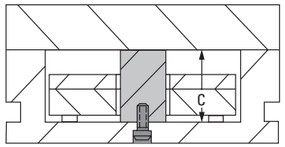


Material: S.A.E. 1040 Steel

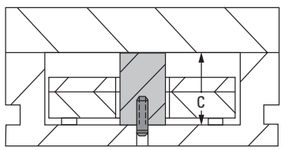




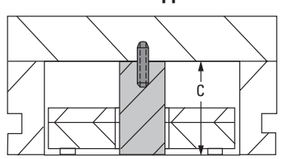
Cap Screw Application



Threaded Locating Pin Application

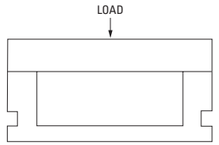


Socket Set Screw Application

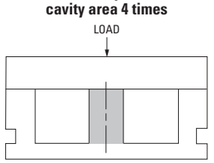


Material: S.A.E. 1040 Steel

No support pillars



One row of support pillars increases the permissible cavity area 4 times



Two rows of support pillars increase the permissible cavity area 9 times

MOLD COMPONENTS – INCH

Copper-Based Alloy Sprue Bushings

High-conductivity, corrosion-resistant, copper-based alloy bushing body with hardened 420 stainless steel nozzle seat insert

- Reduces sprue cooling time and cycle time
- Helps prevent sprue sticking or break-off within bushing
- Stainless steel nozzle seat provides wear resistance and insulates to reduce transference of heat from machine nozzle to the sprue area
- PSB Series is directly interchangeable with existing DME "B" Series steel sprue bushings
- PSU Series is directly interchangeable with existing DME "U" Series steel sprue bushings
- Reduces the need for water lines in the sprue area
- Reduces scrap caused by contact between hot sprue and finished parts on conveyor belt or drop chute area
- Provides a more rigid sprue for robotic part removal

"PSB" Series with a 1.000" Diameter Stem

(Interchangeable with DME "B" Series Sprue Bushings)

MOLD COMPONENTS – INCH

Copper-Based Alloy Sprue Bushings

Consistently recommended by a wide range of resin manufacturers, molders, moldmakers, designers and engineers, Many users are so pleased with the overall performance of this product that Copper-Based Alloy Sprue Bushings are now specified in all of the molds they build.

Here are several benefits users rave about:

- **Reduced sprue cooling and overall cycle time**
  Mold cycles are often limited or controlled by the length of time needed for solidification of the plastic sprue since it must be cool enough not to break or tear as the mold opens. This cycle limiting condition changes by using this bushing – without any other changes to the mold.

- **Helps prevent sprue sticking, break-off and corrosion**
  With conventional steel sprue bushings, many plastic resins, additives, colorants and combinations lead to corrosion and sticking problems. The inherent corrosion resistance and release properties of the copper alloy used in the sprue bushing results in a significant increase in performance and product life compared to conventional steel sprue bushings.

- **Yields more rigid sprues with reduced sprue cool time for robotic removal of parts**
  The sprue is often used as the grab point in robotic removal of parts, sprues and runners. This requires that the sprue be rigid enough to resist the pressure of the robot fingers as well as the extraction forces. With conventional steel sprue bushings, this often means added cooling time to the mold cycle. The high thermal conductivity of a copper-based alloy reduces sprue cool time, again without any other changes to the mold.

- **Molding problems caused by sprues are eliminated**
  A molders choice for a variety of mold and resin applications say that they are able to control many sprue-related problems. As one molder who uses the product said,"I no longer struggle with sprue problems."

These Sprue Bushings are available in a number of popular standard sizes (see table on facing page), and as non-standards with quick delivery. Contact DME with your next application to reduce sprue cooling and cycle time.

Property Comparisons: Copper Alloy -vs- Steel Sprue Bushings Materials

MATERIAL	THERMAL CONDUCTIVITY AT 68°F BTU/(FT_HR_°F)	THERMAL DIFFUSIVITY AT 68°F FT²/HR

platenGUARD™ Locating Rings

platenGUARD Locating Rings protect your mold bases and press platens for their entire life cycles. Available in two styles, platenGUARD Locating Rings are a hybrid innovation that is designed to maximize performance efficiencies by preventing forceful contact with platens that will cause nonparallel parting line faces. Flat platens minimize flash from non-planer mounting of the mold halves, reducing mold sampling and repair costs.

platenGUARD Locating Rings consistently excel at their core function of properly locating the mold in the press. Additionally, they create a hands-free mold setting procedure that reduces risk of technician injury and liability.

- Steel substrate effectively locates the mold in the press
- Resilent surfaces protect platen even when balancing is difficult
- Purgings do not adhere to the resilient surface
- Prevents machine platen damage from impact during mold setting
- Increases productivity through improved setting procedure
- Completely retrofittable with standard locating rings
- Made in the U.S.A.

Extension Nozzle

For use with "T-Series" 3-Plate Mold Bases

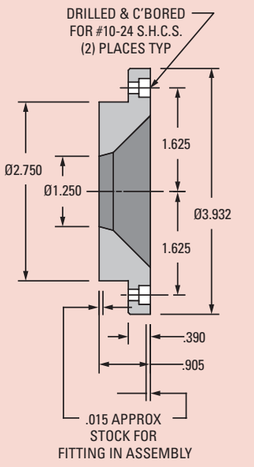
These 3-plate extension bushings can save material, reduce cycle time and help prevent runner hang-ups in 3-plate molds.

- Reduces sprue length to save material, reduce cycle time and aid in the ejection of the runner from the mold
- Easier, faster installation than competitive bushings … all grinding for final fit is on flat surfaces with no I.D. or O.D. angles to grind
- More sizes than competitive bushings to suit more applications
- Made from AISI 4140 steel, hardened to 28-32 HRC

Runner Stripper Plate Bushing

TEB0001

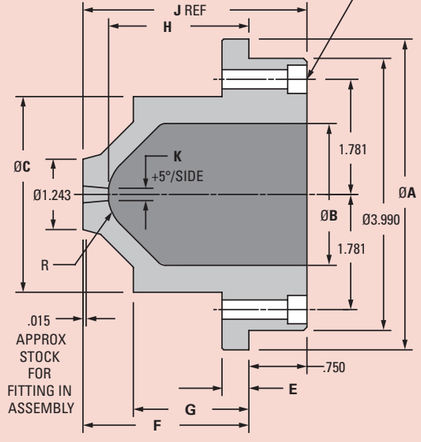
#10-24 x 1-1/2 long S.H.C.S.
(2) included



Small Extension Nozzle Bushing

TEB0002 thru TEB0005

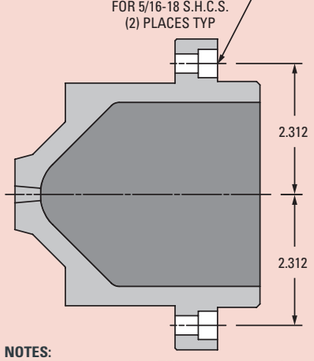
#10-24 x 1-1/4 long S.H.C.S.
(2) included



Large Extension Nozzle Bushing

TEB0006 thru TEB0011

5/16-18 x 7/8 long S.H.C.S.
(2) included



NOTES:
1. Stripper plate bushing TEB0001 is used with all small and large extension nozzle bushings.
2. Appropriate S.H.C.S. are included with all bushings (TEB0001 thru TEB0011).
3. Select small or large bushing based on "A" clamping plate (A.C.P.) thickness, X-1 stripper plate thickness, machine nozzle spherical radius and machine nozzle clearance requirements.

Guide Pins for Special Mold Tooling Needs

DME Special Straight and Shoulder Guide Pins can be custom-ordered in a wide range of diameters and lengths to suit almost any mold tooling requirement. Made with case-hardened steel for dependable performance and long service life, DME Special Guide Pins feature:

- Diameters up to 3"
- Lengths up to 33-1/2"
- Case-hardened steel (HRC 58-64)
- Close tolerances of .0005" on critical diameters

DME operates a state-of-the-art manufacturing facility to ensure that your quality and delivery goals are met. Extensive resources and efficient processes provide rapid order fulfillment. Advanced manufacturing techniques and trained, dedicated personnel ensure quality.

Contact DME for your special guide pin needs. We can quote your application and process your order immediately (see faxable quote form on next page).

DME

MOLD COMPONENTS – METRIC

Bronze-Plated Shoulder Bushings, Ejection Bushings, & Self Lubricating Guided Ejection Bushings – Metric

Bronze-Plated Shoulder Bushings – METRIC

Precision-ground steel with exclusive bronze plating, these are the only bushings that have oil grooves and a true bushing surface that extends the full length of the bushing. DME Bronze Bushings perform smoother and longer than plain steel bushings. Selected lubricant is distributed throughout the bearing surface by the figure-8 oil groove system. The bronze surface will not gall.

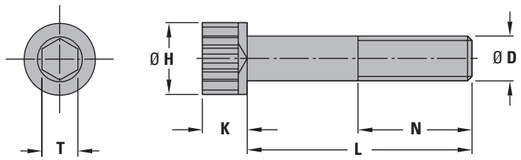
Socket Head Cap Screws – M

INFORMATION KEY:
D = Thread Diameter
H = Head Diameter
K = Head Height
L = Length
N = Thread Length
T = Hex Socket Size (Across Flats)
Standard: DIN 912-12.9
Material: Per DIN Specification
Dimensions: Shown in Millimeters (mm)



D	N	H	K	T	L																							
					8	10	12	16	20	25	30	40	50	60	70	80	90	100	110	120	130	140	150	160	180	200	220	240	260
M4	12	7	4	3																									
M6	18	10	6	5																									
M8	22	13	8	6																									
M10	25	16	10	8

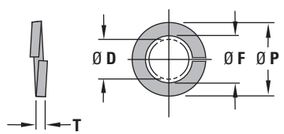
Lock Washers (Spring Washers) – R54

Rondanas de Presion | Freios | Rondelles de retenue | Sicherungsscheibe (Federscheibe)

INFORMATION KEY:
D = For Screw Diameter
F = Inside Diameter
P = Outside Diameter
T = Thickness
Standard: DIN 7980
Material: Per DIN Specification
Dimensions: Shown in Millimeters (mm)



ITEM NUMBER	D	F	P	T	AVAILABILITY
R54 08 2	08	8.1	12.7	2.0	
R54 10 2,5	10	10.2	16	2.5	
R54 12 2,5	12	12.5	18	2.5	

HOW TO ORDER: Specify Item Number. Include zeros and commas but omit decimals and all spaces (spaces are only shown in table above for easier reading).

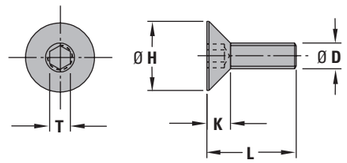
MOLD COMPONENTS – METRIC

Flat Head Screws Stop Disk for Ejector Plates

Flat Head Screws – SM

Tornillo de cabeza plana avellanada | Parafusos de cabeça cónica | Vis creuses | Senkkopfschrauben

INFORMATION KEY:
D = Thread Diameter
H = Head Diameter
K = Head Height
L = Length
T = Hex Socket Size (Across Flats)
Standard: DIN 7991-10.9
Material: Per DIN Specification
Dimensions: Shown in Millimeters (mm)



ITEM PREFIX	H	K	T	D	L									
					8	10	12	16	20	25	30	35	40	45	50
SM3	6	2.5	1.7	M3											
SM4	8	3	2.3	M4											
SM5	10	4	2.8	M5											
SM6	12	5	3.3	M6											
SM8	16	6	4.4	M8											
SM10	20	8	5.5	M10											
SM12	24	10	6.5	M12											

HOW TO ORDER: Specify Item Number with prefix and L length. Include zeros as shown, but omit all spaces (spaces are only shown here for easier reading).

Prefix L

Example: Prefix SM3 L 10

Example: Prefix SM8 L 16

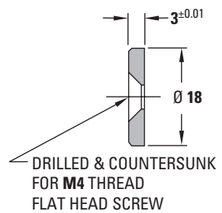
Stop Disk for Ejector Plates – R18

Arandela de Tope | Anilhas de encosto | Repos d'épaisseur pour plaques d'éjection | Distanzscheibe für Auswerferplatte

INFORMATION KEY:
Standard: Euro-Series
Material: 1.1191 (AISI 1045 Type) Steel
Dimensions: Shown in Millimeters (mm)



ITEM NUMBER	AVAILABILITY
R18 18	

HOW TO ORDER: Specify Item Number. Omit spaces (spaces are only shown in table above for easier reading).

Use with SM4 8 Flat Head Screw (M4 thread x 8mm long) which must be purchased separately. See Flat Head Screws above.

DME GATE CUTTERS

A Cut Above The Rest

Selecting the Correct Gate Cutter for Your Application:

To ensure a quality finished product, it is important to choose the proper gate cutter. Consider the following when selecting a cutter...

- Contour of the back of the blade
- Blade length
- Blade opening
- Handle length

The blade characteristics should match the part at the area of de-gating.

Blade Contour

Flat Face:

For general purpose cutting where the sprue is fully accessible or proud of the cutting surface.

Nipper Type (slightly rounded):

For sprue cutting where access to the sprue may be slightly recessed

Angle Heads:

For recessed sprue cutting and access to internal cavities.

Convex/Concave:

For special applications where the sprue is recessed.

Blade Stop

When cutting hard or brittle material it is recommended to use a cutter with a blade stop. Adjusting the stop so the blades stop short of hitting each other will extend the life of the blades.

Handles

How much pressure an operator must exert when cutting a sprue or gate is determined by the length of the cutter handle. A handle that is too long for the operator's hand is difficult to grip while a handle that is too short causes excessive strain. Match the cutter with the operator's hand and the sprue being cut. Ergonomic handles are an effective way to reduce operator fatigue and decrease the risk of carpal tunnel syndrome. Have a left handed operator? We have left handed gate cutters.

Quantity Discounts

Standard Gate Cutters -
12-23 pairs - less 3%
24-74 pairs - less 7%
75-99 pairs - less 10%
100+ pairs - less 13%

INCH PINS, SLEEVES, BLADES

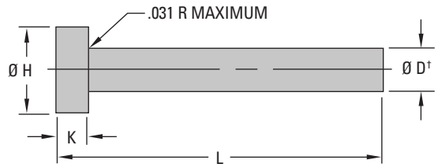
INCH High-Hardness Ejector Pins – H13 Nitrided – Straight



- Higher core hardness makes the THX pins ideal for use in die cast dies or other high temperature applications
- Core hardness of 50-55 HRC minimizes nicking, dishing and bending
- Non-chipping surface treatment of 65-74 HRC alleviates flashing
- Annealed and finished heads permit easy machining
- Centerless ground D diameter
- Final finish minimizes wear and prolongs pin life

INCH PINS, SLEEVES, BLADES

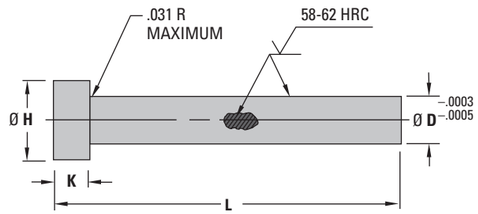
INCH Close Tolerance M-2 Through-Hardened Ejector Pins

INFORMATION KEY:
D = Pin Body Diameter
H = Head Diameter
K = Head Thickness
L = Length
S = Shoulder Length
Tolerance on Ø D: -.0003/-.0005
Material: M2 / 1.3343 / SKH51
Heat Treat: Hardened 58-62 HRC
Surface Treatment: None (Through-Hard)

- **Industry-Leading .0002" Tolerance Band**
- Centerless ground D diameter
- Precision made of superior quality M-2 high-speed tool steel
- Superior wear resistance
- Exceptional performance at elevated temperatures
- Hot-forged heads provide uniform grain flow, higher tensile strength

Straight Ejector Pins – EJP-IMH

ITEM NUMBER PREFIX (WITH DIAMETER)	Ø D PIN BODY DIAMETER	Ø H HEAD DIAMETER	K HEAD THICKNESS	L = 06 LENGTH (INCHES)	L = 10 LENGTH (INCHES)
EJP-IMH-0062-_*_	1/16 (0.0625)	.250	.125	⚡	
EJP-IMH-0093-_*_	3/32 (0.0937)	.250	.125	⚡	
EJP-IMH-0125-_*_	1/8 (0.1250)	.250	.125	⚡	⚡
EJP-IMH-0187-_*_	3/16 (0.1875)	.375	.187		⚡
EJP-IMH-0250-_*_	1/4 (0.2500)	.437	.187	⚡	⚡



***HOW TO ORDER:** Specify Item Number by adding L length in inches (06 or 10) after Item Number Prefix.
• **Include zeros and dashes, as shown.** Examples: EJP-IMH-0062-06; EJP-IMH-0125-10; EJP-IMH-0250-10

Thin Wall Ejector Sleeves and Sleeve Extensions

Thin Wall Sleeves

DME Standard Thin Wall Sleeves reduce cost by replacing the need to buy expensive custom ejector sleeves or to machine steps in standard sleeves.

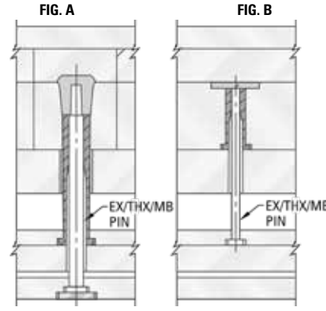
INCH PINS, SLEEVES, BLADES

INCH Ejector Sleeves – Nitrided O.D.

Ejector sleeve applications

Fig. A shows a typical Ejector Sleeve application for plastics molding or die casting where the sleeve is used to eject the piece part.

Fig. B shows an application where the sleeve serves as a bushing for the ejector pin. This allows replacement without machining if wear occurs. This practice is also desirable where the ejector pin is located between cavity inserts. Using a sleeve as a bushing provides a full bearing diameter for the pin.



- Precision made of superior quality thermal shock resisting hotwork die steel
- Hot-forged heads provide uniform grain flow, higher tensile strength
- Outside diameter nitrided to 65-74 HRC hardness and finished to minimize wear
- Centerless ground and polished outer diameter
- Inside bearing diameter is 30-35 HRC hardness and finished honed
- Lead-in taper designed to allow interference-free entry of the ejector pin into the sleeve

INCH PINS, SLEEVES, BLADES

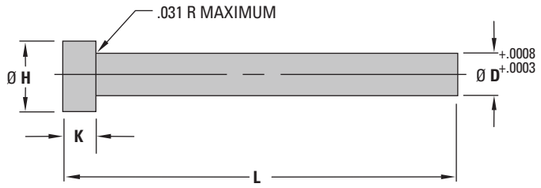
INCH Core Pins – H13 – Standard Medium Hardness



- Precision made of superior quality hotwork die steel standard hardness 38-42 HRC
- Heads are hot-forged for uniform grain flow, higher tensile strength, then annealed to permit easier machining and stamping
- +.0008"/+.0003" tolerance on pin diameter ensures a close fit for coring purposes
- Pin body and head are finish ground
- Centerless ground and polished outer diameter

INCH Core Pins – C

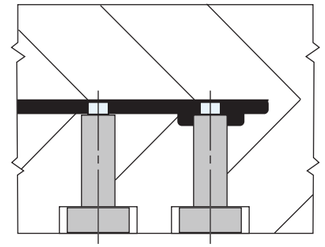
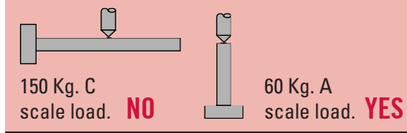
†Heads of 3"-length pins are not annealed. If annealed heads on 3"-length pins are required, they must be special ordered. (Alternately, you may purchase 6" pins and cut to required length.)

***HOW TO ORDER: Combine Item Number Prefix and the length (L dimension) desired.**
Examples: C9M3, C33M10

Typical application



Hardness checking guidelines



If checking hardness of core pins, do not use method "NO" above, since it will provide an inaccurately low reading. The preferred method is to stand the pin on its head and check the cut end using the A scale, 60 Kg. load as shown above.

PRECAUTIONS:

The cut end must be parallel to head end, with stem length of 2" minimum. Use cutting fluid to avoid overheating and localized annealing. Position indentation in middle of pin diameter.

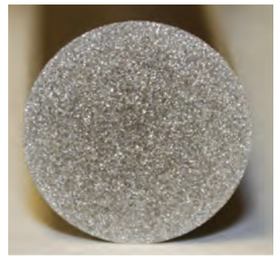
Vortex™ Core Pins and Plugs

Porcerax II™

Vortex Core Pins and Plugs are made from Porcerax II. Porcerax II is a porous, sintered metal with a porosity of 20 to 30% by volume. With a series of interconnected pores averaging a diameter of 7 (.0003") or 20 (.0008") microns throughout, the primary function is the elimination of gas.

Vortex Pins and Plugs provide a location-specific method of venting gas. Due to its porosity volume, one fourth of the surface becomes a vent.

Vortex Pins & Plugs



- Pins are 3" long and are available in diameters of .250", .375" and .500"
- Plugs are offered in .250", .500" and 1.00" lengths in diameters of .250" and .375"
- Heat treated to 30–40 HRC [Hardness: HMV 300–400]
- Tensile strength: 74,000 lbs./sq.in.
- Thermal Linear Expansion Coefficient: (at 68˚F - 302˚F) 6.67-6.94 E-06 in./in./F˚
- Porosity: 20 to 30% air by volume
- Heat transfer co-efficient (at room temperature): 16.93–19.35 BTU/ft. hr. F˚

INCH PINS, SLEEVES, BLADES

Copper-Based Alloy Core Pins – High Conductivity Pins

- Reduces cycle times
- Ten times better conductivity than steel
- Beryllium-free copper-based alloy
- Hardness of 90-98 Rockwell B
- Available in 18 diameters and four lengths

DME's Copper-Based Alloy Core Pins are precision made using a high-strength, beryllium-free copper alloy, rather than traditional steels used in core pins. This alloy provides several advantages, including better conductivity, increased strength, reduced wear and resistance to rusting. These Core Pins are ideal for use in high-volume applications where part quality, fit and finish are critical.

Reduced cycle time

It is often difficult or expensive to adequately cool the area surrounding the core pin in a mold, especially when molding thick-walled parts. Depending on the design of the mold, it may even be impossible to run water lines near the pin, thus greatly increasing cycle times.

The copper-based alloy used in these Core Pins can significantly reduce mold cycle times by increasing the rate of heat transfer. When used in place of traditional C- or CX-type pins, will provide up to 10 times the rate of heat transfer. Heat is transferred at twice the rate of pins made of a beryllium-copper alloy.

In addition, the low-adhesion characteristics of the pins make part ejection faster and easier. All of these advantages combine to reduce the overall cycle time and increase productivity.

Improved part quality

The excellent thermal diffusivity of the pins provide a homogenous temperature profile throughout the core surface. Uniform temperatures result in reduced post-mold shrinkage and warpage, improving the quality of the part. Also, because of the low-adhesion characteristics of the pin, parts are not damaged by adhesion to the pin during part ejection.

Lower machining costs

The high thermal conductivity of Copper-Based Alloy Core Pins reduces the need for complex cooling designs that can require hours of additional machining. Plus, the pins require no additional heat treatment and can be machined using conventional methods or EDM.

Longer service life

A high resistance to thermal stress, wear and abrasion which helps assure long life under virtually any molding conditions. With appropriate alteration to pin diameter, they can be used in conjunction with standard ejector sleeves. The dissimilar metals and compatible coefficient of friction will reduce metal-to-metal pick up and wear.

Wide range of sizes

Available in 18 pin diameters from 3/32- to 3/4- and 3-, 6-, 14- or 20-inch lengths.

Typical Mold

As shown in the pie chart, mold cooling comprises the largest part of the mold cycle. Copper-Based Alloy Core Pins can significantly reduce this mold cooling portion to reduce overall cycle time!

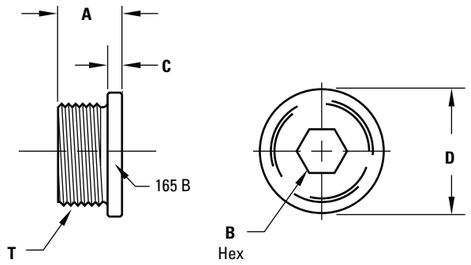
Core Pin Retainers

Core Pin Retainers



DME Standard Core Pin Retainers offer better performance than a set screw and allow the core pin to float within the counter-bore. Conveniently machined in the same setup and location as the corresponding pin hole, Core Pin Retainers eliminate labor costs to make individual backup plates.

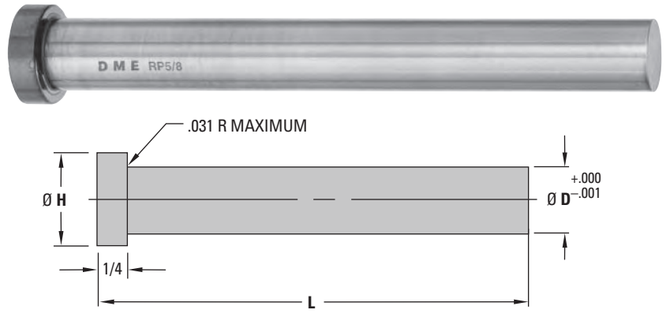
INCH PINS, SLEEVES, BLADES

INCH Return Pins



- Precision made of superior quality thermal shock resisting hotwork die steel
- Hot-forged heads provide uniform grain flow, higher tensile strength
- Outside diameter nitrided to 65-74 HRC hardness and finished to minimize wear
- Centerless ground and polished outer diameter

.500 (1/2") Diameter Series

ITEM NUMBER	Ø D PIN DIA	Ø H HEAD DIA	L PIN LENGTH
7410	.500	.750	3.563
7411			4.063
7412			4.563
7413			5.063
7414			5.563
7415			6.063
7416			6.563

For longer lengths, use EX33 Ejector Pins.

.625 (5/8") Diameter Series

ITEM NUMBER	Ø D PIN DIA	Ø H HEAD DIA	L PIN LENGTH
7510	.625	.875	4.063
7511			4.563
7512			5.063

DuPont™ Performance Lubricants Extreme conditions. Extreme performance. For use with all DME Pins, Sleeves & Blades

DuPont™ Krytox® TM7 grease is specifically designed for the lubrication of segmented molds, both electrically and steam-heated. This lubricant eliminates carbon residue buildup on the molds associated with hydrocarbon and hydrocarbon-based synthetic greases. It exhibits excellent adhesion, allowing the operator to significantly increase production by extending lubrication intervals. The TM7 will not bleed out to the parting line due to high heat tolerance and will last in excess of 5000 cycles, based on average curing times, without relubrication.

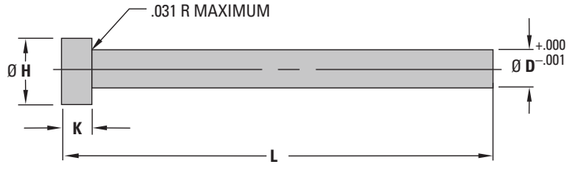
Krytox® TM7 is a fluorinated grease with polytetrafluorethylene (PTFE) thickeners and selected additives. It has excellent thermal stability and load-carrying abilities. TM7 has a high degree of chemical inertness and extremely high hydrolytic stability. Contact with boiling water or steam has no effect on this product, it will stay in the location it was applied, providing the best lubrication possible.

PART NUMBER	DESCRIPTION
TM7TUBE2OZ	TM7 KRYTOX GREASE 2OZ TUBE
TM7TUBE8OZ	TM7 KRYTOX GREASE 8OZ TUBE
TM7JAR1KG	TM7 KRYTOX GREASE 1KG JAR

TYPICAL PROPERTIES OF DuPont™ Krytox® TM7	
Standard NLGI Penetration Grade	#2
Estimation Useful Temperature Range	-20 to 290 (-4 to 555)
Pour Point, °C (°F)	–25 (–13)
Base Oil Viscosity, cSt 20 °C (68 °F) 40 °C (104 °F) 100 °C (212 °F)	 1,715 500 46
Oil Volatility, % in 22 hr, 260 °C (500 °F), D972 modified	<1
Appearance	White, creamy consistency
Specific Gravity	2.0

INCH PINS, SLEEVES, BLADES

INCH Sprue Puller Pins



- Precision made of superior quality thermal shock resisting hotwork die steel
- Hot-forged heads provide uniform grain flow, higher tensile strength
- Outside diameter nitrided to 65-74 HRC hardness and finished to minimize wear
- Heads annealed for easy machining
- Centerless ground and polished outer diameter

L = Length
Standard: DIN/ISO Type
Material: Beryllium-free Copper based alloy
Surface Treatment: None
Max. Temp.: 350°C (662°F)
Dimensions: Shown in Millimeters (mm)

ITEM PREFIX	D	H	K	L

* "(PCM)" is only a cross-reference to current DME Europe Catalog item prefix numbers.

High Thermal Conductivity Pins

Advantages:

- Reduced cycle time
- 5 times better conductivity than steel
- Improved part quality
- Lower machining costs
- Longer service life

HOW TO ORDER: Specify Item Number with prefix, D diameter, and L length. Include zeros and dashes but omit decimals, as shown.

Prefix: CRP-ECS - D: ____ - L: ____

Example: Prefix D L — CRP-ECS-030-0160

Example: Prefix D L — CRP-ECS-120-0315

Special Pins

Quantity:_____
Type of Pin: _____ (specify item prefix)
Material:
☐ 1.2344 (AISI H13 Type) Steel
☐ 1.2210 (AISI L2 Type) Steel
☐ Other_____
Hardness:
☐ Standard (as specified by item prefix)
☐ Other _____ HRC (specify)
Nitrided: ☐ Yes ☐ No
Heads are Annealed (unless otherwise specified) _____
Desired Delivery: _____
Tolerances:
☐ As indicated in item drawing
☐ Other (specify on drawing)

Special Sleeves

Quantity:_____
Type of Sleeve: _____ (specify item prefix)
Material:
☐ 1.2344 (AISI H13 Type) Steel
☐ 1.2210 (AISI L2 Type) Steel
☐ Other_____
Hardness:
☐ Standard (as specified by item prefix)
☐ Other _____ HRC (specify)
Nitrided O.D.: ☐ Yes ☐ No
Nitrided I.D.: ☐ Yes ☐ No
Heads are Annealed
Desired Delivery: _____
Tolerances:
☐ As indicated in item drawing
☐ Other (specify on drawing)

INFORMATION KEY:

D = Pin Inner Diameter
E = Pin Body Diameter
H = Head Diameter
K = Head Thickness
L = Length
N = Bearing Length
Standard: JIS
Material: SKD61
Surface Treatment: Nitrided
Surface Hardness: 900 HV~
Core Hardness: 38-42 HRC

NOTE: All dimensions are in mm.

E TOLERANCE	
E ≤ 10.0	E ≥ 12.0
-0.01 -0.02	-0.01 -0.03

INFORMATION KEY:

D = Pin Inner Diameter
E = Pin Body Diameter
H = Head Diameter
K = Head Thickness
L = Length
N = Bearing Length
Standard: JIS
Material: SKD61
Surface Treatment: Nitrided
Surface Hardness: 900 HV~
Core Hardness: 38-42 HRC

NOTE: All dimensions are in mm.

E TOLERANCE	
E ≤ 10.0	E ≥ 12.0
-0.01 -0.02	-0.01 -0.03

DH7 TOLERANCE			
D ≤ 3.0	3.5 ≤ D ≤ 6.0	6.5 ≤ D ≤ 10.0	D ≥ 12.0
+0.010 +0	+0.012 +0	+0.015 +0	+0.018 +0

HOW TO ORDER: Use Item Number in table for ordering. JES-3-6-375

JIS Sleeve availability ranges from same-day shipment to 3-week lead time.

DME SPECIAL PINS AND SLEEVES

RAPID DELIVERY,
COST-EFFECTIVE SOLUTIONS

SPECIAL PINS AND SLEEVES

Pins and Sleeves for Special Applications

Every day, challenging new applications and materials are forcing moldmakers to develop creative new tooling solutions. DME is here to help, with comprehensive capabilities for manufacturing special pins and sleeves – quickly and cost-effectively. We offer a wide range of special features, including:

- Special diameters (up to 3") and lengths (up to 72")
- Steps
- Profiles
- Special shoulders
- O-ring grooves
- Non-standard core hardness
- Flats
- Threaded I.D. or O.D.
- Non-standard materials (non H-13)
- Surface coatings – more than 100 available, including titanium nitriding, chromium, etc.
- And many other options

If your needs are more complex, contact DME for a quote. Even when you select special pins or sleeves, you still get the industry's *fastest pricing and delivery* at a competitive price.

Industry-leading delivery lead times

You can count on DME delivery for your special pin and sleeve needs. Your DME representative can provide you with a precise completion date for your project.

MOLD SERVICE TABLES

This new generation of Mold Service Table is specifically designed to:

- Quickly and safely open molds
- Providing access to all parts of the mold for assembly and fitting of components, repair, maintenance, cleaning and production preparation
- Allows the mold to be opened and rotated without the use of cranes
- Rotates 360° for easy access to each mold half with indexing every 90°

3 Ton Table

Features:

- 1.5, 2, 3 and 6 ton weight capacity
- Provides a working height of 850mm (33.46")
- Tables include: Pivot Plates, Platform & Tool Plate
- Optional accessories- Mechanical Brackets, Magnetic Brackets and Drawer Units

Mechanical Bracket

6 Ton Table

Magnetic Brackets

Drawer Unit- Special Order

HOW to BUILD AN ITEM NUMBER: Diameter + Length + CS (Cap Screw)

Examples:

¼" diameter x 2-¾" long Cap Screw = 14234CS

1" diameter x 2" long Cap Screw = 12CS

½" diameter x 10" long Cap Screw = 1210CS

3	–	–	–	–	●	●	●	●	●	3
4	–	–	–	–	–	●	●	●	●	4
5	–	–	–	–	–	–	●	●	●	5

● = in stock

HOW TO BUILD AN ITEM NUMBER:
Diameter + Length + DP (Dowel Pin)

Examples:

3/16" diameter x 1/2" long Dowel Pin = 31612DP

1/4" diameter x 1-1/4" long Dowel Pin = 14114DP

1" diameter x 2" long Dowel Pin = 12DP

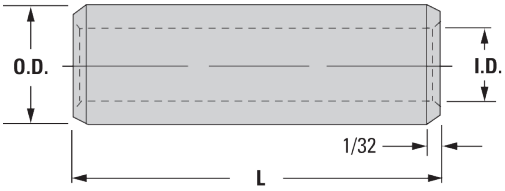
WHEN ORDERING, PLEASE SPECIFY:

1. Quantity
2. Diameter
3. Length

Tubular Dowels

DME Tubular Dowels are hardened and precision ground. They are used in DME mold base assemblies to accurately align the "B" plate, support plate and the ejector housing.

The use of DME Tubular Dowels allows more room for waterlines by superimposing the dowel pin and cap screw as shown at the right.



NOM. DIA	O.D. ± .0002	I.D.	L STANDARD LENGTHS (PRICE EACH)						
			3/8	1/2	7/8	1 3/8	1 7/8	2 3/8	2 7/8
3/8	.3752	.260	●	–	●	–	–	–	–
5/8	.6252	.385	–	●	–	●	●	●	–

MOLD ASSEMBLY

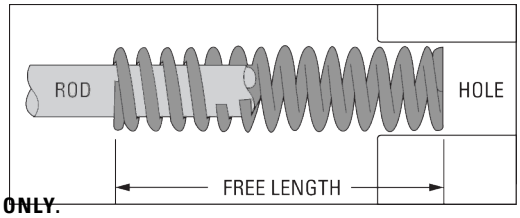
Mold and Die Springs Medium Duty (Color-Coded Blue)

(LBS x .454 = kg)

Medium Duty Mold and Die Springs (Blue) – SMD

Maximum Deflection: 50% of Free Length Efficient Operating Range: 25% to 35% of Free Length

Manufactured by Raymond from a special rectangular-shaped, round-cornered chromium alloy. Provides high resistance to shock loads, increased deflection, wider operating temperatures and longer life. Color-coded by work range to simplify selection and specification.



NOTE: **DEFLECTION VALUES NEAR SOLID INTENDED FOR DESIGN INFORMATION ONLY.

MOLD ASSEMBLY

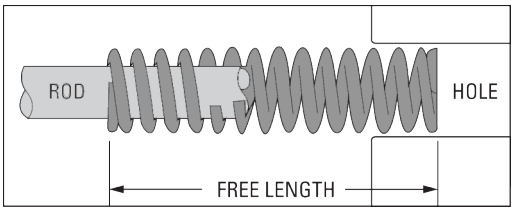
Mold and Die Springs Medium Heavy Duty (Color-Coded Red)

(LBS x .454 = kg)

Medium Heavy Duty Mold and Die Springs (Red) – SMH

Maximum Deflection: 37% of Free Length Efficient Operating Range: 20% to 25% of Free Length

Manufactured by Raymond from a special rectangular-shaped, round-cornered chromium alloy. Provides high resistance to shock loads, increased deflection, wider operating temperatures and longer life. Color-coded by work range to simplify selection and specification.



NOTE: **DEFLECTION VALUES NEAR SOLID INTENDED FOR DESIGN INFORMATION ONLY.

MOLD ASSEMBLY

Mold and Die Springs Extra Heavy Duty (Color-Coded Green)

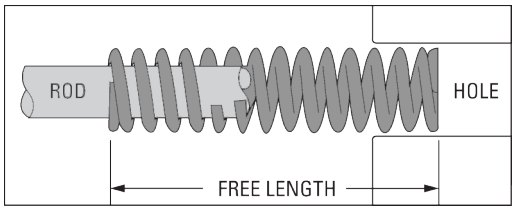
(LBS x .454 = kg)

Extra Heavy Duty Mold and Die Springs (Green) – SEH

Maximum Deflection: 25% of Free Length

Efficient Operating Range: 15% of Free Length

Manufactured by Raymond from a special rectangular-shaped, round-cornered chromium alloy. Provides high resistance to shock loads, increased deflection, wider operating temperatures and longer life. Color-coded by work range to simplify selection and specification.



NOTE: **DEFLECTION VALUES NEAR SOLID INTENDED FOR DESIGN INFORMATION ONLY.

MOLD ASSEMBLY

Belleville Washers (Disc Springs) – METRIC

Belleville Washers (Disc Springs) – WZ8050

Rondanas Beleville | Rondelles Belleville
Anilhas Belleville | Tellerfedern

INFORMATION KEY:
D = Outside Diameter
F = Load Force in Newtons (at specified "S" Deflections)
G = Inside Diameter
H = Overall Height (of one unloaded washer)
J = Maximum Theoretical Deflection to flat
S = Deflection (shown for % of Maximum Theoretical Deflection J)
T = Thickness
Standard: DIN 2093
Material: DIN 50 CrV 4 (AISI 6150 Type) Steel
Max. Temp.: 300°C (572°F)
Dimensions: Shown in Millimeters (mm)

Codipro DSS Double Swivel Shackle

Specially Designed for Lifting and Turning Under Heavy Load

Gradup

- Large shackle for easy secure connection directly to crane hook
- Compact and Ergonomic; requires less clearance
- Tightens with allen wrench
- Double articulation allows perfect alignment with the sling
- Standard in Metric and Inch
- Stainless Steel, adaptor and special thread options available as special order

Codipro MEGADSS Double Swivel Shackle

Specially Designed for Lifting and Turning Under Heavy Load

Gradup

- Large shackle for easy secure connection directly to crane hook
- Compact and Ergonomic; requires less clearance
- Tightens with allen wrench
- Double articulation allows perfect alignment with the sling
- Standard in Metric and Inch
- Stainless Steel, adaptor and special thread options available as special order

MOLD ASSEMBLY

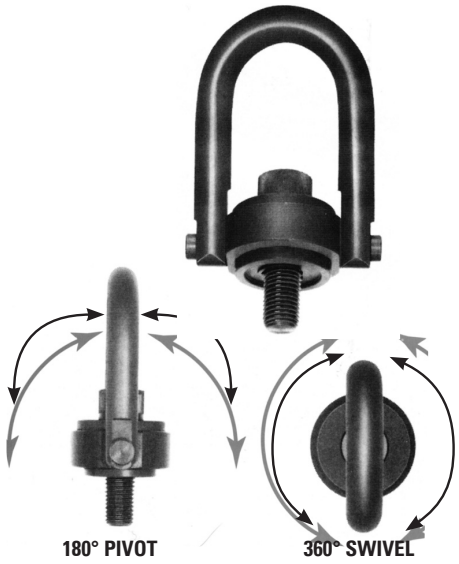
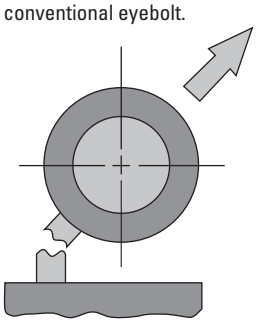
Hoist Rings – INCH

Whether you're hoisting an 800-pound mold base or a 15,000-pound piece of molding room equipment, DME Hoist Rings can add a margin of performance and convenience to the job at hand. The inherent danger posed by conventional static eyebolts (side-load breakage and hook disengagement) combined with stricter safety regulations make DME Hoist Rings an important addition to any mold shop or molding plant. Unlike eyebolts, these Hoist Rings will not yield to heavy side loads within their rated capacity and can pivot 180° and swivel 360° to compensate for pitch, roll and sway when lifting heavy, unbalanced loads. As with all mechanical devices, regular inspection for wear, and strict adherence to installation and operating guidelines is necessary to prevent failure due to misuse.



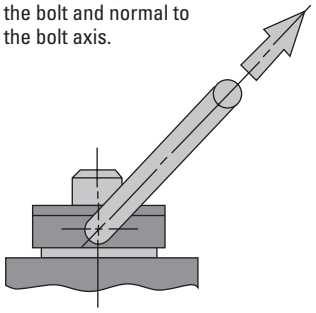
- Safer and stronger than conventional eyebolts
- Pivots and swivels to compensate for pitch, roll and sway when lifting heavy or unbalanced loads
- Prevents accidents caused by eyebolt breakage or lifting hook disengagement
- Will not yield to heavy side loads when used in accordance with manufacturer's instructions
- Manufactured from high-quality alloy steel (certified heat treatment)
- Meets or exceeds MIL-STD-1365 (OR-11) and MIL-STD-209C
- Seven sizes to handle loads from 800 to 15,000 pounds
- Safety factor is 5 times the rated load capacity in any direction

See what happens when heavy side loads are applied to a conventional eyebolt.



EXCESSIVE SIDE LOADS CAN CAUSE BOLT FAILURE.

The same load applied to a DME Hoist Ring is translated into a primary tension load at the bolt and normal to the bolt axis.



HIGH-TENSION LOADS ARE WELL WITHIN THE DESIGNED SAFETY LIMITS OF THE STRESSED HOIST RING.

MOLD ASSEMBLY

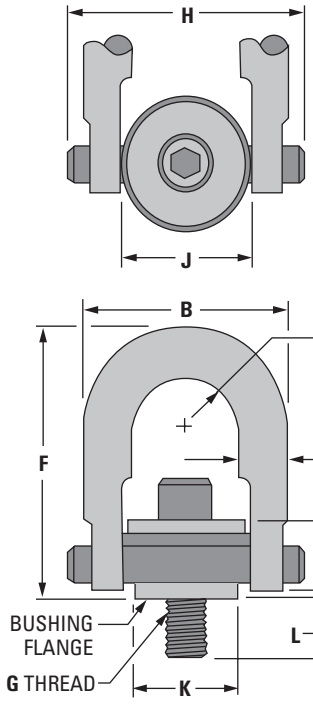
Hoist Rings – INCH Installation and Ordering Information

Material: Alloy steel (certified heat treatment), black oxide
Safety Factor: 5 times rated load in any direction
Range of Movement.: 360° swivel; 180° pivot
Dimensions: Shown in inches (in)

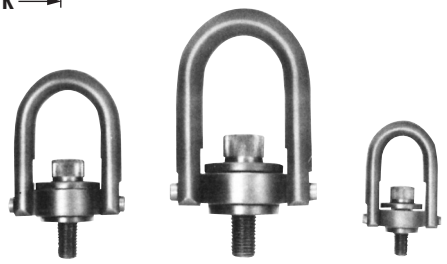
Installation Data

Tap workpiece for hoist ring bolt with axis vertical to mounting surface. Work surface should be flat and smooth to provide full 360° flush seating for the bushing flange. For installation in ferrous materials, the screw should be tightened to the full torque loading recommended in column TL below, +25% – 0.

(SAFETY NOTE: Some loosening may develop after prolonged service in a permanent installation. It is advisable to periodically retighten the mounting bolt to maintain the specified torque value.) For maximum safety with soft metal workpieces such as aluminum, use extra length bolts with minimum effective thread engagement of 2 times thread diameter. The use of free fit spacers between the bushing flange and mounting surface is not recommended, as this will reduce the safe load rating on angularly applied loads. Hoist ring must be free to swivel 360° and pivot 180° at all times.



NOTE: Additional hoist ring sizes and bolt lengths (including metric versions) are also available on request.



Hoist Rings – SHR (includes bolt and retaining ring)

HOW TO ORDER: specify Item Number. Omit spaces (spaces are only shown here for easier reading).
NOTE: All hoist ring assemblies and replacement kits listed in chart are in stock. (No specials available.)

REPLACEMENT KIT INCLUDES SCREW AND RETAINING RING

FEATURES
- Pivots and swivels to compensate for pitch, roll and sway when lifting heavy or unbalanced loads.
- High-strength alloy steel with minimum tensile strength of 1,250 MPa (125 kg/mm²).
- Certified heat treatment with 100% Magnaflux inspection.
- Corrosion-resistant plating.
- Maximum operating temperature 200°C (392°F).
- Safety factor is 5 times the rated load in any direction.

***NOTE**
- Standard tolerance ± 0.8mm.
- **E** = the use of spacers between bushing flange and mounting surface is not recommended as this will reduce the safety load rating.
- **TL** = recommended torque load + 25% - 0.
- **P** = rated.
- **W** = weight (of Hoist Ring Assembly)

CARACTERíSTICAS
- Gira y pivotea para compensar la inclinación, el rodaje y la oscilación al levantar cargas pesadas o sin equilibrio.
- Aleación de acero de gran resistencia con fuerza elástica mínima de 1,250 MPa (125 kg/mm²).
- Tratamiento de calor certificado con inspección Magnaflux del 100%.
- Enchapado resistente a la corrosión.
- Temperatura máxima de operacion: 200°C.
- El factor de seguridad es 5 veces la carga calificada en cualquier direccion.

***NOTA**
- Tolerancia estándar ±0.8mm.
- **E** = el uso de espaciadores entre el reborde del cojinete y la superficie de montaje no se recomienda ya que esto reducirá la calificación de seguridad de la carga.
- **TL** = carga de torsión recomendada + 25% - 0.
- **P** = carga nominal.
- **W** = peso.

MERKMALE
- Gleichmäßiges anheben von schweren oder einseitigen Lasten durch Drehgelenke und Abstandsausgleichung. Keine Abweichung nach der schweren Lastseite.
- Legierter Spezialstahl mit min. Streckgrenze von 1.250 MPa (125 Kg/mm²)
- Beglaubigte Wärmebehandlung mit 100% iger Magnaflux.
- Kontrolle Korrosionsbeständiger Oberflächenschutz.
- Alle Materialangaben gelten bis zu einer Temp. bis max. 200°C.
- Alle Heberinge sind in allen Richtungen mit 5-facher Sicherheit ausgelegt.

***BEMERKUNGEN**
- Allgemeine Toleranzen ± 0.8mm.
- **E** = zwischen Flansch und Montageoberfläche keine Distanzscheibe einlegen: dadurch wird die Sicherheit der Hebeleistun g reduziert.
- **TL** = empfohlene Drehmomentbelastung.
- **P** = Nennlast.
- **W** = Gewicht.

CARACTÉRISTIQUES
- Ils pivotent et tournent pour amortir le balancement des charges lourdes ou deséquilibrées. Résistent aux charges latérales.
- Acier allié avec une résistance de 1.250 MPa (125 kg/mm²).
- Une trempe garantie par une inspection Magnaflux de 100%.
- Résiste à la corrosion grâce à un traitement de surface.
- Température de fonctionnement 200°C.
- Coefficient de sécurité 5:1 quelle que soit l'orientation de la charge.

***NOTE**
- Tolérance standard ± 0.8 mm.
- **E** = L'emploi d'une rondelle de réglage entre l'anneau et la surface d'appui est à déconseiller. Elle réduirait le coefficient de sécurité.
- **TL** = couple de serrage + 25% - 0.
- **P** = charge maximum.
- **W** = Poids en kg.

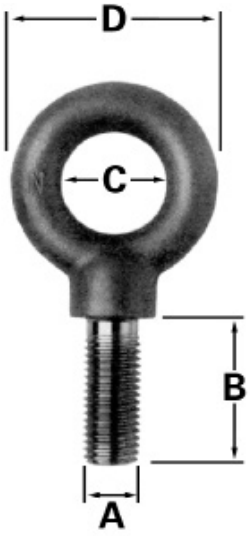
CARACTERíSTICAS
- Eles se articulam e giram para compensar a inclinação, rolagem e balanço de cargas pesadas ou desequilibradas.
- Liga de aço de alta resistencia de 1.250 MPa (125 kg/mm²).
- Tratamento a calor, certificado por inspeção 100% Magnaflux.
- Revestimento resistente à corrosão.
- Temperatura máxima operacional de 200°C.
- Coeficiente de segurança de 5 vezes a carga nominal, em qualquer direção.

***NOTA**
- Tolerancia padrão: ± 0.8mm.
- **E** = nao se recomenda o uso de espaçadores entre o flange da bucha e a superficie de montagem, pois isto reduziria o valor da carga nominal de segurança.
- **TL** = carga recomendada de torque + 25% - 0.
- **P** = carga nominal.
- **W** = peso.

MOLD ASSEMBLY

Forged Eyebolts

- High-quality U.S. forged eye bolts
- Shoulder design
- Shows full engagement
- Huge savings, always in stock!



Material: C1030 steel, forged, heat-treated, quenched and drawn
Tensile strength: 65,000 PSI min.
Yield strength: 50,000 PSI min.
Elongation: 30% min.
Reduction of area: 60% min.

Warning: Rated capacity is substantially reduced when loading at any angle greater than 45° from bolt centerline. At an angle of 45°, rated capacity is reduced to 1/4 of shown rating.

MOLD ASSEMBLY

Permanent Magnetic Lifters

Bunting® MagLift Permanent Magnetic Lifters are powered by blocks of high-energy neodymium magnetic material. Switching is achieved by making one of these blocks reversible. In the "on" position, the reversible block is in parallel with the static blocks so that a concentrated magnetic field is produced at the pole feet for lifting. In the "off" position, the reversible block is rotated through 180° to provide a total magnetic short circuit within the lifter body.

Force/Air Gap Curve – Hand Controlled

MOLD ASSEMBLY

Lifting Holes

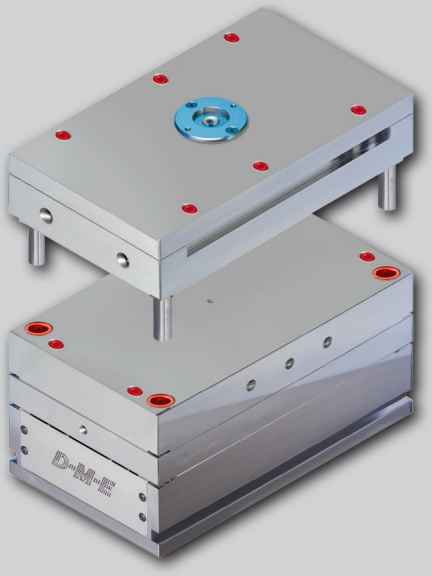
Lifting Holes can be used to install hoist rings for ease of handling. Mold base can be configured only with Lifting Holes which are appropriate for the specific mold base size. Refer to the preceding pages for a comprehensive selection of hoist rings.

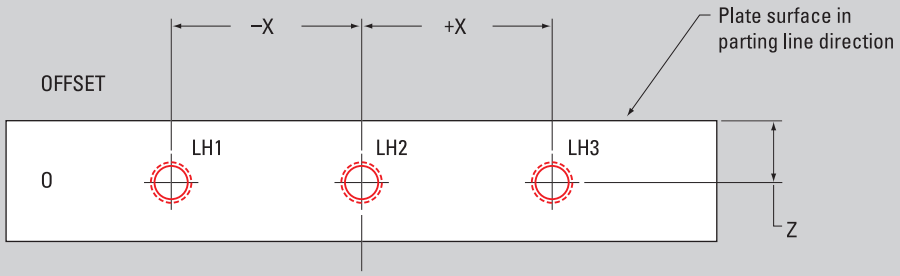
Lifting Hole Diameters

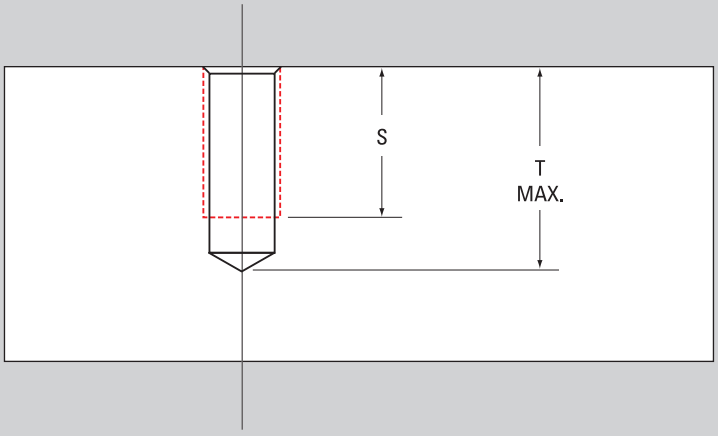
BASE SIZE	PLATE THICKNESS	
	0.875	1.375
88-1118	½-13 UNC	½-13 UNC
1123-1524	⅝-11 UNC	⅝-11 UNC
1529-1829	⅝-11 UNC	¾-10 UNC
1835-2429	⅝-11 UNC	1"-8 UNC
2435	N/A	1"-8 UNC

Lifting Holes

THREAD SIZE	S	T MAX.
½-13	1.00	1.38
⅝-11	1.25	1.75
¾-10	1.50	2.00
1"-8	2.00	2.62







FOR QUOTING OR ORDERING, SPECI-

Lifting Holes

Lifting holes can be selected up to three per plate edge. They are available in top clamp plate, A-plate, B-plate, support plate, and bottom clamp plate.

Note that for safety reasons, only the recommended hole diameters (or larger) shown in the table are offered.

NOTES:

1. Blue color configurations require additional assembly screws.
2. Numbers of additional assembly screws suggested are minimum required.
3. No safety factor considered. The moldmaker is entirely responsible for the chosen configuration.

KEY:

= No additional assembly screws required

= Add screws as noted (+)

N/A = Not available/not recommended

MOLD ASSEMBLY

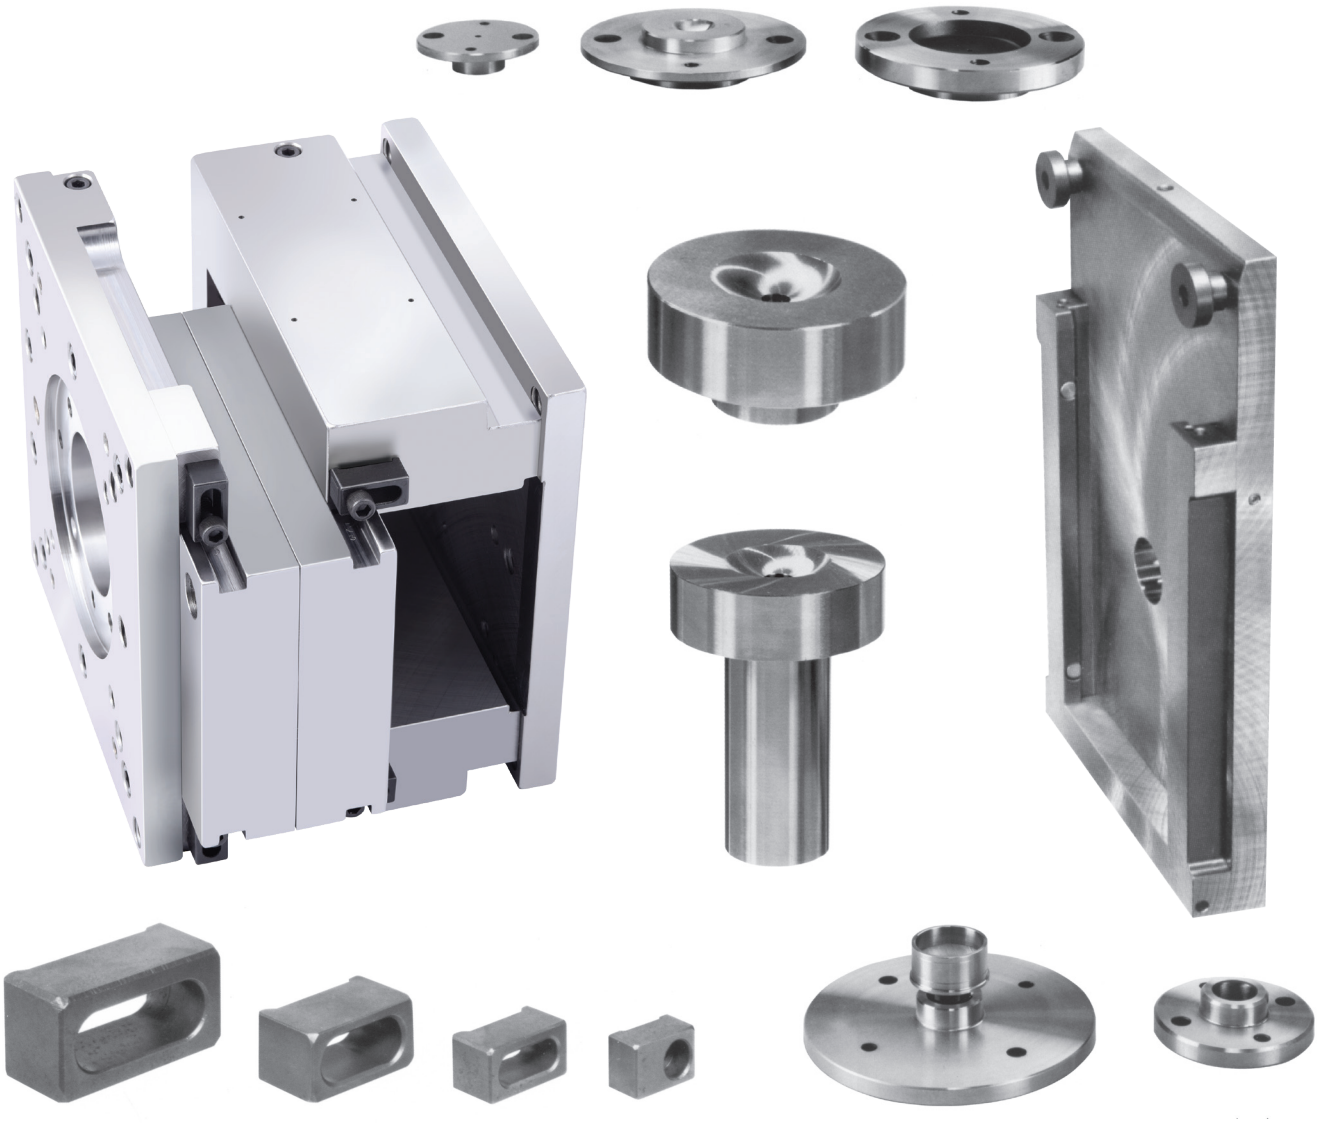
MUD Quick-Change™ Components



Customize MUD frames and insert molds with a full range of components

MUD® Quick-Change frames and companion insert mold series are available with a full range of components. These components permit tailoring MUD frames and insert molds to every injection molding machine up to 500 tons. This makes the cost-saving benefits and time-saving advantages of the Master Unit Die Concept available to virtually every mold maker and plastic molder in the industry.

See the MUD Quick-Change Systems catalog for all of the standard parts installed in the MUD basic Quick-Change frames and companion insert molds. U, H and Double H frame components include sprue bushings, locating rings and guide posts. Components for T style and standard style insert molds include leader pins and bushings, ejector plates and ear plates.
